Acknowledgments	xi
1. Introduction	1
2. Evolutionary Branching in a Classical Model for Sympatric Speciation	9
3. Adaptive Diversification Due to Resource Competition in Asexual Models	38
3.1 Adaptive dynamics with symmetric competition kernels	50
3.2 Adaptive dynamics with asymmetric competition kernels	64
4. Adaptive Diversification Due to Resource Competition in Sexual Models	74
4.1 Evolutionary branching in sexual populations when assortative mating is based on the ecological trait (one-allele models)	82
4.2 Evolution of assortative mating	90
4.3 Evolutionary branching in sexual populations when assortative mating is not based on the ecological trait (two-allele models)	100
4.4 A footnote on adaptive speciation due to sexual selection	110
5. Adaptive Diversification Due to Predator-Prey Interactions	113
5.1 Adaptive diversification in classical predator-prey models	114
5.2 An example of evolutionary branching in host-pathogen models	132
6. Adaptive Diversification Due to Cooperative Interactions	139
6.1 Diversification in models for intraspecific cooperation	139
6.2 Diversification in coevolutionary models of cooperation	148
7. More Examples: Adaptive Diversification in Dispersal Rates, the Evolution of Anisogamy, and the Evolution of Trophic Preference	163
7.1 Diversification in dispersal rates	163

7.2 Diversification in gamete size: evolution of anisogamy	180
7.3 Diversification in trophic preference: evolution of complexity in ecosystems	189
8. Cultural Evolution: Adaptive Diversification in Language and Religion	195
8.1 Diversification of languages	197
8.2 Diversification of religions	200
9. Adaptive Diversification and Speciation as Pattern Formation in Partial Differential Equation Models	217
9.1 Partial differential equation models for adaptive diversification due to resource competition	218
9.2 Partial differential equation models for predator-prey interactions	236
9.3 Partial differential equation models for adaptive diversification in spatially structured populations	242
9.4 A general theory of diversification in partial differential equation models	258
10. Experimental Evolution of Adaptive Diversification in Microbes	262
Appendix: Basic Concepts in Adaptive Dynamics	279
