PART 1

THE PROBLEM AND THE APPROACH

1. The Balance of Nature: What Is It and Why Care?	3
1.1 Balancing a Noisy System	3
1.2 Ecosystem Stability and Sustainability	6
1.3 Of Food Webs, Stability, and Function	9
1.4 Ecological Instability and Collapse	10
1.5 A Theory for Food Webs	17
2. A Primer for Dynamical Systems	20
2.1 Qualitative Approaches to Complex Problems	20
2.2 Dynamical Systems	22
2.3 Case Study: Hopf Bifurcation in an Aquatic Microcosm	42
2.4 Summary of Key Points	45
3. Of Modules, Motifs, and Whole Webs	47

PART 2

FOOD WEB MODULES: FROM POPULATIONS TO SMALL FOOD WEBS

4. Excitable and Nonexcitable Population Dynamics	53
4.1 Continuous Resource Dynamics	53
4.2 From Nonexcitable to Excitable Population Dynamics	56
4.3 Stage-Structured Resource Dynamics	61
4.4 Empirical Evidence for Excitable Dynamics	63
4.5 Summary: The Dual Nature of Population Growth Rates	65
5. Consumer-Resource Dynamics: Building Consumptive Food Webs	67
5.1 Interaction Strength	67
5.2 Consumer-Resource Interactions: Two Qualitative Responses to Changes in a Parameter	71

5.3 Summary	79
5.4 Further Assumptions about the C-R Model	80
5.5 Some Nonequilibrium Thoughts	83
5.6 C-R Dynamics in Nature	84
5.7 Summary	88
6. Lagged Consumer-Resource Dynamics	89
6.1 Discrete Consumer-Resource Interactions	90
6.2 Stage-Structured Consumer-Resource Dynamics	94
6.3 Stage-Structured Interactions and Alternative States	97
6.4 Empirical Results	100
6.5 Summary	101
7. Food Chains and Omnivory	103
7.1 A Familiar Modular Example: Food Chains	105
7.2 Omnivory	110
7.3 Stage Structure and Food Chain Stability	116
7.4 Empirical Results	118
7.5 Summary	121
8. More Modules	123
8.1 Generalists and Food Web Dynamics	123
8.2 The Diamond and the Intraguild Predator	132
8.3 Empirical Results	137
8.4 Summary	140

PART 3 TOWARD WHOLE SYSTEMS

9. Coupling Modules in Space: A Landscape Theory	145
9.1 Variability, Space, and Food Webs	145
9.2 Individual Traits and a Landscape-Scale Module	147
9.3 Mobile Adaptive Consumers	151
9.4 Food Webs in Space	155
9.5 Asymmetric Flux Rates through Food Webs	160
9.6 Dynamical Implications on the Landscape	162
9.7 Empirical Evidence	164
9.8 Summary	169
10. Classic Food Web Theory	170
10.1 The Classic Approach	170
10.2 Matrices and Local Stability	172

10.3	Gershgorin Discs for Community Matrices: An Intuitive Approach to Eigenvalues	172
10.4	A Controlled Approach to Food Web Matrices	175
10.5	Some Classic Whole-Matrix Results	178
10.6	Recent Whole Community Approaches	184
10.7	Summary	188
11.	Adding the Ecosystem	189
11.1	Grazing Food Webs and Whole Ecosystems	189
11.2	The N-R-D Module	192
11.3	Detritus and C-R Interactions	194
11.4	Nonequilibrium Dynamics and Detritus as a Distributor	197
11.5	Discussion	199
11.6	Summary	199
12.	Food Webs as Complex Adaptive Systems	201
12.1	Searching for Empirical Signatures	201
12.2	Adaptive Behavior, Changing Food Web Topology, and Ecosystem Size	202
12.3	Empirical Results for Canadian Shield Lake Ecosystems	206
12.4	Subsidies, Opportunists, and Homogenization	213
12.5	Humans in the Food Web	215
	Bibliography	219
	Index	235
