PART 1. MECHANISMS

Chapter 1. Mate Choice and Mating Preferences: An Overview

1.1 Introduction	3
1.2. What is mate choice?	10
1.3. Choosers and courters, not females and males	11
1.4. Mate choice is distinct from sexual selection	12
1.5. Preference and antipathy underlie realized mate choices	13
1.6. Preference functions	15
1.7. Stages of mate choice	23
1.8. Mate choice as a problem in animal communication	26
1.9. Prospectus	29
1.10. Additional reading	30

Chapter 2. Measuring Preferences and Choices

2.1. Introduction	31
2.2. Measuring mate choice using mating outcomes	33
2.3. Empirical assays of preference: where to begin	35
2.4. Measures of preference	35
2.5. Stimuli used in preference assays	41
2.6. Repeatability of preferences	47
2.7. Sequential versus simultaneous assays	48
2.8. Other concerns with study design and interpretation	51
2.9. Synthesis: measuring mate choice and mating preferences in the twenty-first century	53
2.10. Additional reading	56

Chapter 3. The First Steps in Mate Choice: Preference Functions and Sensory Transduction

3.1. Introduction	57
3.2. Common features of sensory systems	63

3.3. Chemoreception	75
3.4. Vision	78
3.5. Hearing	80
3.6. Other modalities	83
3.7. Sensory constraints on mating preferences	85
3.8. Synthesis	89
3.9. Additional reading	89
 Chapter 4. Beyond the Periphery: Perception, Cognition, and Multivariate Preferences	
4.1. Introduction	91
4.2. Mechanisms of perceptual integration	101
4.3. Categorical perception	107
4.4. Integration rules for complex preferences	110
4.5. Synthesis: complex preferences as integrated phenotypes	116
4.6. Additional reading	120
 Chapter 5. Aesthetics and Evaluation in Mate Choice	
5.1. Introduction: "A taste for the beautiful"	121
5.2. Universals of beauty?	123
5.3. Detection and evaluation as distinct components of mate choice	126
5.4. Mechanisms of evaluation	130
5.5. Evaluative mechanisms and perception are related: "beauty in the processing experience"	137
5.6. Plasticity and evolvability of evaluative mechanisms	137
5.7. Additional reading	138
 Chapter 6. From Preferences to Choices: Mate Sampling and Mating Decisions	
6.1. Introduction	139
6.2. The biological context of mate choice	142
6.3. Mate sampling algorithms in theory and practice	148
6.4. Sequential and static: fixed-threshold rules	148
6.5. Sequential and dynamic: adjustable thresholds	149
6.6. Simultaneous and static: comparative evaluation and (in)transitivity	158
6.7. Simultaneous and dynamic: best-of- <i>n</i> , comparative Bayes, and random walk	163

6.8. Sampling multiple traits	165
6.9. Recognition	166
6.10. Executing choices	167
6.11. The marginal cost of sampling and choice	169
6.12. Synthesis	171
6.13. Additional reading	173
Chapter 7. Mate Choice During and After Mating	
7.1. Introduction	174
7.2. Remating and choice of multiple mates	177
7.3. Biasing fertilization	179
7.4. Resource allocation to offspring	191
7.5. Mate choice across stages: premating decisions and cryptic choice	194
7.6. Synthesis: what is different about cryptic choice?	196
7.7. Additional reading	200
Chapter 8. Mutual Mate Choice	
8.1. Introduction	201
8.2. Reciprocal preferences	202
8.3. Social promiscuity and mutual mate choice	205
8.4. Pairing decisions: finding a social mate	213
8.5. Pair bonding	220
8.6. Mate choice in hermaphrodites	225
8.7. Synthesis	225
8.8. Additional reading	227
Chapter 9. Variation in Preferences and Choices: General Considerations	
9.1. Overview	228
9.2. Scales of variation	231
9.3. Repeatability	232
9.4. Covariates of preference variation	251
9.5. Same-sex sexual behavior	260
9.6. Synthesis	261
9.7. Additional reading	262
Chapter 10. Variation I: Genetics	
10.1. Overview	263

10.2. Interspecific genetic differences	265
10.3. Genetic mapping	268
10.4. Genetic variation in natural populations	270
10.5. The genetic architecture of mating preferences	279
10.6. Functional characterization of preference genes	284
10.7. Synthesis	286
10.8. Additional reading	287

Chapter 11. Variation II: Biotic and Abiotic Environment

11.1. Introduction	288
11.2. Context-sensitive effects	288
11.3. State-dependent preferences	290
11.4. Genotype-by-environment interactions	299
11.5. Synthesis	304
11.6. Additional reading	305

Chapter 12. Variation III: Social Environment and Epigenetics

12.1. Introduction	306
12.2. Social effects before birth: epigenetic and parental effects	307
12.3. Social status before and after maturity	312
12.4. Early learning: impacts on preferences	313
12.5. Mechanisms of early learning	318
12.6. Variation in early learning	324
12.7. Social experience after sexual maturity	327
12.8. Nonindependent mate choice and copying	328
12.9. Genotype by environment revisited: the instinct to learn	332
12.10. Synthesis	335
12.11. Additional reading	338

PART 2. ORIGINS, EVOLUTION, AND CONSEQUENCES

Chapter 13. Origins and Histories of Mating Preferences: Chooser Biases

13.1. Introduction	341
13.2. Preferences have histories	346
13.3. Perceptual biases	348

13.4. Biases from non-choice functions	350
13.5. Novel responses of preference mechanisms	352
13.6. Byproduct biases: novel biases shaped by current signals	353
13.7. Synthesis	354
13.8. Additional reading	357

Chapter 14. Selection on Mate Choice and Mating Preferences

14.1. Introduction	358
14.2. Selection on preferences for courter traits	359
14.3. Evolution of choosiness and mate-sampling strategies	372
14.4. When to choose: pre- versus postmating	378
14.5. Evolution of plastic preferences	381
14.6. Constraints on preference evolution	383
14.7. Coercion and choice	384
14.8. Synthesis	385
14.9. Additional reading	387

Chapter 15. Dynamic Evolution of Preferences, Strategies, and Traits

15.1. Introduction	388
15.2. Genetic covariance drives preference evolution: the Fisher-Lande-Kirkpatrick null model	389
15.3. Constraints on genetic covariance: (mis)alignment of preferences and traits	396
15.4. Adaptive coevolution	402
15.5. Mode of transmission and preference-trait coevolution	410
15.6. The limits of indirect selection	412
15.7. Mate choice in context: social and life history evolution	419
15.8. Compatibility and epistasis	424
15.9. Mate choice as an agent of trait evolution	426
15.10. Population-level consequences of mate choice	428
15.11. Coevolution of multiple traits and preferences	431
15.12. Synthesis: a unified view of preference evolution	434
15.13. Additional reading	437

Chapter 16. Mate Choice, Speciation, and Hybridization

16.1. Introduction	439
16.2. Divergence of preferences among isolated populations	440

16.3. Divergence of preferences with secondary contact	444
16.4. Reinforcement and speciation with gene flow	450
16.5. Conspecific mate preference and intraspecific mate choice	461
16.6. Mate choice and genetic exchange	462
16.7. Synthesis	471
16.8. Additional reading	472

Chapter 17. Mate Choice and Human Exceptionalism

17.1. Introduction	473
17.2. Social influences on human mating decisions	476
17.3. Variation in human mating preferences	478
17.4. Synthesis: integrating evolutionary and social-science approaches to human sexuality	480
17.5. Additional reading	481

Chapter 18. Conclusions: A Mate-Choice View of the World

18.1. The sweep of mate choice	482
18.2. From sexual selection to preference evolution	483
18.3. How we talk about mate choice	484
18.4. How we study mate choice	485
18.5. Four open questions about mate-choice mechanisms	486
18.6. Mate choice and total selection	488
18.7. Synthesis: mate choice and its consequences	492
