

Contents

Acknowledgments	ix
1. Introduction	1
1.1. Integrating Land and Sea	2
1.2. A Brief History of Biodiversity Research	5
1.3. Goals and Structure of This Book	8
2. Observed Patterns of Global Biodiversity	10
2.1. Marine Coastal Biodiversity	12
2.2. Marine Pelagic Biodiversity	24
2.3. Deep-Sea Biodiversity	31
2.4. Terrestrial Biodiversity	35
2.5. Changes in Biodiversity Patterns through Time	41
2.6. Robustness of Documented Biodiversity Patterns	44
2.7. Synthesis	50
3. Drivers and Predictors of Global Biodiversity	56
3.1. Hypothesized Drivers of Diversity	57
3.2. Spatial and Temporal Scale	73
3.3. Empirical Predictors of Diversity	76
3.4. Synthesis	90
4. Developing a Theory of Global Biodiversity	93
4.1. Basic Neutral Theory	94
4.2. Implementation in Forward and Coalescence Mode	101
4.3. Including Metabolic Theory	104
4.4. Including Habitat Area and Productivity	109
4.5. Including Temperature Niches	113
4.6. Discussion and Comparison with Other Theory	122
5. Predicting Global Biodiversity Patterns from Theory	124
5.1. Fitting Theoretical Predictions to Empirical Data	125
5.2. Ectotherms versus Endotherms	137
5.3. Including Niches	142
5.4. Synthesis	143

6. Conservation Applications	149
6.1. Global Biodiversity Hotspots and Conservation Priorities	150
6.2. Observed Biodiversity Change and Its Drivers	155
6.3. Projecting Biodiversity Change from Theory	162
6.4. The Future of Biodiversity	169
7. Conclusions	171
7.1. Summary of Major Findings	171
7.2. Ecological Theory	174
7.3. A Niche for Neutrality?	176
7.4. Spatial Scale	177
7.5. Ecological versus Evolutionary Time	178
7.6. Applications	179
7.7. Limitations	180
7.8. Final Outlook	182
References	185
Index	207
