

Contents

<i>Preface</i>	ix
<i>Acknowledgments</i>	xi
1. Introduction	1
1.1 Why Forecast?	1
1.2 The Informatics Challenge in Forecasting	3
1.3 The Model-Data Loop	4
1.4 Why Bayes?	6
1.5 Models as Scaffolds	7
1.6 Case Studies and Decision Support	8
1.7 Key Concepts	10
1.8 Hands-on Activities	10
2. From Models to Forecasts	11
2.1 The Traditional Modeler's Toolbox	11
2.2 Example: The Logistic Growth Model	12
2.3 Adding Sources of Uncertainty	14
2.4 Thinking Probabilistically	23
2.5 Predictability	25
2.6 Key Concepts	33
2.7 Hands-on Activities	33
3. Data, Large and Small	34
3.1 The Data Cycle and Best Practices	34
3.2 Data Standards and Metadata	38
3.3 Handling Big Data	40
3.4 Key Concepts	43
3.5 Hands-on Activities	43
4. Scientific Workflows and the Informatics of Model-Data Fusion	44
4.1 Transparency, Accountability, and Repeatability	44
4.2 Workflows and Automation	45
4.3 Best Practices for Scientific Computing	48
4.4 Key Concepts	51
4.5 Hands-on Activities	52

5. Introduction to Bayes	53
5.1 Confronting Models with Data	53
5.2 Probability 101	54
5.3 The Likelihood	56
5.4 Bayes' Theorem	61
5.5 Prior Information	65
5.6 Numerical Methods for Bayes	68
5.7 Evaluating MCMC Output	71
5.8 Key Concepts	74
5.9 Hands-on Activities	75
6. Characterizing Uncertainty	76
6.1 Non-Gaussian Error	76
6.2 Heteroskedasticity	82
6.3 Observation Error	83
6.4 Missing Data and Inverse Modeling	87
6.5 Hierarchical Models and Process Error	90
6.6 Autocorrelation	94
6.7 Key Concepts	96
6.8 Hands-on Activities	97
7. Case Study: Biodiversity, Populations, and Endangered Species	98
7.1 Endangered Species	98
7.2 Biodiversity	104
7.3 Key Concepts	106
7.4 Hands-on Activities	107
8. Latent Variables and State-Space Models	108
8.1 Latent Variables	108
8.2 State Space	110
8.3 Hidden Markov Time-Series Model	111
8.4 Beyond Time	114
8.5 Key Concepts	116
8.6 Hands-on Activities	117
9. Fusing Data Sources	118
9.1 Meta-analysis	120
9.2 Combining Data: Practice, Pitfalls, and Opportunities	123
9.3 Combining Data and Models across Space and Time	127
9.4 Key Concepts	130
9.5 Hands-on Activities	130
10. Case Study: Natural Resources	131
10.1 Fisheries	131
10.2 Case Study: Baltic Salmon	133
10.3 Key Concepts	137

II. Propagating, Analyzing, and Reducing Uncertainty	138
11.1 Sensitivity Analysis	138
11.2 Uncertainty Propagation	145
11.3 Uncertainty Analysis	155
11.4 Tools for Model-Data Feedbacks	158
11.5 Key Concepts	162
11.6 Hands-on Activities	163
Appendix A Properties of Means and Variances	163
Appendix B Common Variance Approximations	164
12. Case Study: Carbon Cycle	165
12.1 Carbon Cycle Uncertainties	165
12.2 State of the Science	166
12.3 Case Study: Model-Data Feedbacks	171
12.4 Key Concepts	174
12.5 Hands-on Activities	174
13. Data Assimilation 1: Analytical Methods	175
13.1 The Forecast Cycle	175
13.2 Kalman Filter	178
13.3 Extended Kalman Filter	183
13.4 Key Concepts	185
13.5 Hands-on Activities	186
14. Data Assimilation 2: Monte Carlo Methods	187
14.1 Ensemble Filters	187
14.2 Particle Filter	190
14.3 Model Averaging and Reversible Jump MCMC	194
14.4 Generalizing the Forecast Cycle	195
14.5 Key Concepts	197
14.6 Hands-on Activities	198
15. Epidemiology	199
15.1 Theory	200
15.2 Ecological Forecasting	201
15.3 Examples of Epidemiological Forecasting	202
15.4 Case Study: Influenza	205
15.5 Key Concepts	207
16. Assessing Model Performance	208
16.1 Visualization	208
16.2 Basic Model Diagnostics	211
16.3 Model Benchmarks	215
16.4 Data Mining the Residuals	217
16.5 Comparing Model Performance to Simple Statistics	217
16.6 Key Concepts	219
16.7 Hands-on Activities	219

17. Projection and Decision Support	221
17.1 Projections, Predictions, and Forecasting	222
17.2 Decision Support	223
17.3 Key Concepts	235
17.4 Hands-on Activities	236
18. Final Thoughts	237
18.1 Lessons Learned	237
18.2 Future Directions	240
