Preface	ix
---------	----

Notation	xi
----------	----

1. Nothing as Practical as a Good Theory	1
1.1 What Characterizes a Good Theory?	7
1.2 How to Read This Book	8

PART I INDIVIDUALS

2. Size Spectrum Theory	15
2.1 What Is Body Size?	18
2.2 What Is a Size Spectrum?	19
2.3 Scaling of Physiology with Body Size	21
2.4 What Is the Size Spectrum Exponent?	30
2.5 What Is the Predation Mortality?	33
2.6 How Long Are Marine Food Chains?	35
2.7 What Is the Trophic Efficiency?	35
2.8 Summary	37
3. Individual Growth and Reproduction	38
3.1 The von Bertalanffy Growth Model	39
3.2 Asymptotic Size as a Master Trait	42
3.3 Bioenergetic Formulation of the Growth Equation	48
3.4 Which Other Traits Describe Fish Life Histories?	52
3.5 Summary	54

PART II POPULATIONS

4. Demography	59
4.1 What Is the Size Structure of a Population?	61
4.2 Reproduction, Recruitment, and Density Dependence	71

4.3 Why Use a Stock-Recruitment Relation?	75
4.4 What Is the Physiological Mortality?	76
4.5 Summary	80
5. Fishing	82
5.1 Fisheries Selectivity	84
5.2 Impact of Fishing on Small and Large Species	86
5.3 Fisheries Reference Points	89
5.4 Which Gear Selectivity Maximizes Yield?	95
5.5 Summary	96
6. Fisheries-Induced Evolution	100
6.1 Which Selection Responses Do We Expect?	104
6.2 Quantitative Genetics	106
6.3 Evolutionary Impact Assessment of Fishing	109
6.4 Summary: What Is an Evolutionary Enlightened Fisheries Management?	114
7. Population Dynamics	117
7.1 What Is the Population Growth Rate?	119
7.2 How Fast Does a Population Recover from Overfishing?	124
7.3 How Does a Population Respond to Environmental Fluctuations?	129
7.4 Summary	131

PART III TRAITS

8. Teleosts versus Elasmobranchs	135
8.1 How Do Teleosts and Elasmobranchs Differ?	136
8.2 How Sensitive Are Elasmobranchs to Fishing?	139
8.3 Why Do Teleosts Make Small Eggs?	141
8.4 Why Do Elasmobranchs Make Large Offspring?	142
8.5 Summary	148
9. Trait-Based Approach to Fish Ecology	150
9.1 Life-History Strategies	152
9.2 Traits and Trade-offs	154
9.3 The Sweet Spot of Complexity	158

PART IV
COMMUNITIES

10. Consumer-Resource Dynamics and Emergent Density Dependence	163
10.1 A Consumer-Resource Model	166
10.2 Emergent Density Dependence	172
10.3 When in Life Does Density Dependence Occur?	175
10.4 Fishing on a Stock with Emergent Density Dependence	178
10.5 Summary	180
11. Trait Structure of the Fish Community	183
11.1 Structure of an Unfished Community	184
11.2 Dynamic Community Model	189
11.3 Dynamic Community Model versus Analytic Theory	193
11.4 Species versus Traits	196
11.5 Summary	199
12. Community Effects of Fishing	200
12.1 Trophic Cascades	201
12.2 What Is the Impact of Forage Fishing?	204
12.3 What Is the Maximum Sustainable Yield of a Community?	206
12.4 Size- and Trait-Based Models for Ecosystem-Based Fisheries Management	209

PART V
EPILOGUE

13. The Size- and Trait-Based Approach	217
13.1 Size versus Age-Based Approaches for Fisheries Science	217
13.2 Future Directions of Size- and Trait-Based Theory	221

PART VI
APPENDIXES

A. Single Stock Size Spectrum Model	233
B. Consumer-Resource Model	235
C. Community Model	237
Bibliography	239
Index	255
