Contents

	Preface	vii
1	Simple discrete-time models of single populations	1
2	Density dependence I: Equilibria and stability	15
3	Density dependence II: Cycles and chaos	27
4	Continuous-time models	39
5	Stage-structured models	57
6	Age-structured models	77
7	Metapopulation models	89
8	Spatial models	103
9	Multispecies discrete-time models	125
10	Multispecies continuous-time models	143
11	Introduction to community ecology	161
12	Competitive interactions	173
13	Predator–prey interactions	199
14	Island biogeography theory	223
15	Metacommunity theory	237
16	Neutral ecological theory	251
17	Towards unified models of community ecology	275
18	Dynamic vegetation models	287
19	Carbon- and nutrient-flux models	301
20	Biomass–diversity models	317
	Index	333
