

BRIEF CONTENTS

1 An Introduction 1

PART 1

MENDELIAN GENETICS 17

- 2 Fundamentals of Mendelian Genetics 18
- 3 Extensions and Applications of Mendelian Genetics 42
- 4 Chromosomes and Heredity 73
- 5 Genetic Linkage 104

PART 2

MOLECULAR GENETICS 129

- 6 Chemistry of the Gene 130
- 7 Replication and Recombination of Genes 154
- 8 Transcription and Its Control in Prokaryotes 185
- 9 Eukaryotic Gene Structure and Expression 219
- 10 Translation 255
- 11 Gene Mutation 295
- 12 Transposable Elements 322
- 13 Genetics of Bacteria and Phages 340
- 14 Developmental Genetics 369
- 15 Gene Cloning and Manipulation 415
- 16 Applications of Gene Cloning and Advanced Genetic Mapping 448
- 17 Genes and Cancer 482
- 18 Extranuclear Inheritance 504

PART 3

POPULATION GENETICS 531

- 19 An Introduction to Population Genetics 532
- 20 Extensions and Applications of Population Genetics 557

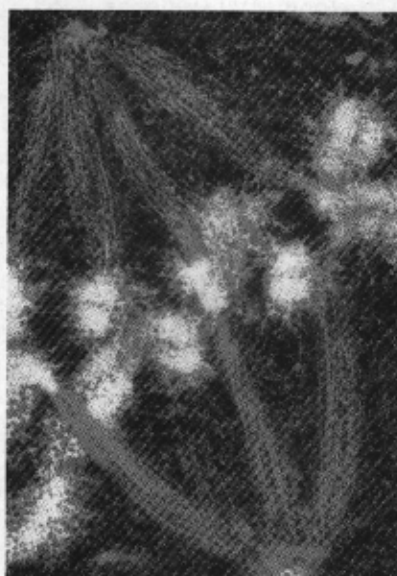

CONTENTS

Preface xi

CHAPTER 1

An Introduction 1

- The Three Branches of Genetics 2
- Transmission Genetics 3
 - Mendel's Laws of Inheritance 3
 - The Chromosome Theory of Inheritance 4
 - Genetic Recombination and Mapping 8
 - Physical Evidence for Recombination 9
- Molecular Genetics 9
 - The Discovery of DNA 9
 - What Genes Are Made Of 12
 - The Relationship Between Genes and Proteins 12
 - What Genes Do 13
- Why Study Genetics? 14
- Summary 15

PART 1

1 MENDELIAN GENETICS 17

CHAPTER 2

Fundamentals of Mendelian Genetics 18

- Principle of Segregation 19
 - Mendel's Experimental Results 19
 - Mendel's Explanation 22
- Principle of Independent Assortment 26
- Probability 28
 - Sum Rule 28
 - Product Rule 28
 - Conditional Probability 29
 - Binomial Probability 29
 - Forked-Line Approach 31
- Goodness of Fit 33
- Mendelian Inheritance in Humans 35
 - Recessive Traits 36
 - Dominant Traits 37
- Worked-Out Problems 38
- Summary 39
- Problems and Questions 39

CHAPTER 3

Extensions and Applications of Mendelian Genetics 42

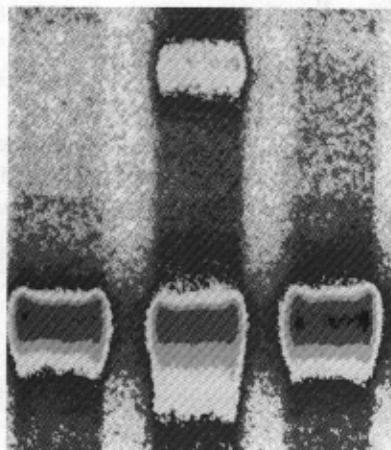

- Dominance 43
 - Complete Dominance 43
 - Incomplete Dominance 43
 - Codominance 44
- Lethals 44

Pleiotropy	45
Penetrance and Expressivity	46
Multiple Alleles	48
Sex-Linked Genes	50
Multiple Genes and Epistasis	54
Genotype-Phenotype Relationships	56
Quantitative Traits	58
Mean and Variance	59
Model of Quantitative Traits	62
Estimating Genetic Variance and Heritability	63
Race and Intelligence	65
Genetic Counseling	66
Paternity Exclusion	67
Worked-Out Problems	69
Summary	70
Problems and Questions	70

CHAPTER 4

Chromosomes and Heredity 73

Sexual Reproduction	74
Chromosomal Morphology	75
Mitosis	78
Prophase	80
Metaphase	80
Anaphase	81
Telophase	81
Meiosis	81
Meiosis I	82
Meiosis II	83
Spermatogenesis and Oogenesis	83
Genes and Chromosomes	85
Chromosomal Changes	88
Changes in Chromosomal Structure	88
Changes in Chromosomal Number	93
Chromosomes in Different Species	99

Chromosomes and Sex Determination	100
Worked-Out Problems	101
Summary	102
Problems and Questions	102

CHAPTER 5

Genetic Linkage 104

Linkage	105
A Physical Explanation	105
Rate of Recombination	108
The Linkage Map	108
Three-Point Crosses	110
Interference	111
Linkage in Humans	113
Somatic Cell Hybridization	115
Four-Stranded Crossing Over	116
Tetrad Analysis	117
Inversions and Recombination	117
Unequal Crossing Over	120
Map Distance and Physical Distance	123
Worked-Out Problems	125
Summary	126
Problems and Questions	126

PART 2 MOLECULAR GENETICS 129

CHAPTER 6

Chemistry of the Gene 130

The Nature of Genetic Material	131
Transformation in Bacteria	131
The Chemical Nature of Polynucleotides	134
DNA Structure	137
Experimental Background	137
The Double Helix	138
Genes Made of RNA	140
Physical Chemistry of Nucleic Acids	141
A Variety of DNA Structures	141
DNAs of Various Sizes and Shapes	145
Activities of Genes	149
Overview of Gene Expression	150
Worked-Out Problems	150

Summary	152
Problems and Questions	152

CHAPTER

7

Replication and Recombination of Genes 154

The Basic Mechanism of DNA Synthesis	155
Semiconservative Replication	156
Semidiscontinuous Replication	156
Priming of DNA Synthesis	157
Bidirectional Replication	157
"Stitching Together" Nascent DNA Fragments	157
Putting It All Together	158
Evidence for the Mechanism of DNA Replication	159
Semiconservative Replication	159
Semidiscontinuous Replication	161
RNA Priming	163
Bidirectional Replication	163
Unidirectional Replication	166
Enzymology of DNA Replication	167
Strand Separation	167
Initiation of Replication	170
Elongation	171
Termination	173
Fidelity of Replication	176
Replication of RNA Genomes	177
The Mechanism of Recombination	177
Forms of Recombination	178
A Model for Homologous Recombination	178
Gene Conversion	182
Worked-Out Problems	183
Summary	183
Problems and Questions	184

CHAPTER

8

Transcription and Its Control in Prokaryotes 185

The Fundamentals of Transcription	186
Discovery of Messenger RNA	186
The Basic Mechanism of Transcription	186
The Detailed Mechanism of Transcription	189
Binding RNA Polymerase to Promoters	190
Common Base Sequences in <i>E. coli</i> Promoters	190
Operons: Units of Gene Expression	191
The <i>lac</i> Operon	191
The <i>trp</i> Operon	197

Termination of Transcription	200
Inverted Repeats and Hairpins	202
A Model for Termination	203
The Termination Factor σ	203
Temporal Control of Transcription	204
Modification of the Host RNA Polymerase	204
The RNA Polymerase Encoded in Phage T7	205
Control of Transcription During Sporulation	206
Infection of <i>E. coli</i> by Phage λ	207
Specific DNA-Protein Interactions	213
Helix-Turn-Helix Motifs in λ -Like Phage	
Repressors	214
The Helix-Turn-Helix Motif of Cro and λ Repressor	214
The DNA Binding Motif of the <i>trp</i> Repressor	215
Worked-Out Problems	215
Summary	217
Problems and Questions	217

CHAPTER

9

Eukaryotic Gene Structure and Expression 219

Chromatin Structure	220
Nucleosomes: The First Order of Chromatin Folding	220
Further Folding of the Nucleosome String	222
Chromatin Structure and Gene Expression	223
RNA Polymerases and Their Roles	224
Promoters	225
Promoters Recognized by Polymerase II	225
Promoters Recognized by Polymerase I	227
Promoters Recognized by Polymerase III	228
Regulation of Transcription	229
Enhancers and Silencers	229
RNA Polymerase II Transcription Factors	230
RNA Polymerase I Transcription Factors	231
Gene-Specific Factors for Polymerase II	232
Transcription Factors that Interact with Promoter Elements	232
Transcription Factors that Interact with Enhancers	232
Structure of Gene-Specific Transcription Factors	234
The Relationship Between Gene Structure and Expression	239
Interrupted Genes	239
Participation of Small Nuclear RNAs in Splicing	243
A Lariat-Shaped Intermediate in Splicing	243
Alternative Splicing	244
Other RNA Processing Events	247
Trimming Ribosomal RNA Precursors	248
Poly(A) Tails	249

- Polyadenylation 250
- Eukaryotic mRNA Cap Structures 251

Worked-Out Problems 252

Summary 253

Problems and Questions 254

CHAPTER 10

Translation 255

- Protein Structure 256
- Protein Function 256
 - The Relationship Between Genes and Proteins 256
- Ribosomes: Protein Synthesizing Machines 260
 - Self-Assembly of Ribosomes 261
- Functions of Ribosomal Proteins 264
 - Polysomes 265
- Transfer RNA: The Adapter Molecule 266
 - The Adapter Function of tRNA 266
 - Secondary Structure of tRNA 267
 - Three-Dimensional Structure of tRNA 267
 - Amino Acid Binding to tRNA 268
 - Specificity of Aminoacyl-tRNA Synthetases 269
- The Genetic Code 271
 - Nonoverlapping Codons 271
 - No Gaps in the Code 271
 - The Triplet Code 272
 - Breaking the Code 273
 - Unusual Base Pairs Between Codon and Anticodon 274
 - The (Almost) Universal Code 275
- Mechanism of Translation 277
 - Initiation 277
 - Elongation: Adding Amino Acids to the Growing Chain 280
 - Termination: Release of the Finished Polypeptide 286
- Translational Control 288
 - Prokaryotic Translational Control 288
 - Eukaryotic Translational Control 290
- Worked-Out Problems** 292
- Summary** 293
- Problems and Questions** 293

CHAPTER 11

Gene Mutation 295

- Types of Gene Mutations 296
 - Somatic versus Germ-Line Mutations 296
 - Morphological Mutations 297
 - Nutritional Mutations 297

- Lethal Mutations 298
- Conditional Mutations 298
- How Mutations Affect the Genetic Material 299
 - Missense and Nonsense Mutations 299
 - Spontaneous Mutations 301
 - Chemical Mutagenesis 306
 - Radiation-Induced Mutations 308
 - Silent Mutations 309
 - Reversion 309
- DNA Repair 311
 - Directly Undoing DNA Damage 311
 - Excision Repair 312
 - Mismatch Repair 312
 - Coping with DNA Damage Without Repairing It 313
 - Severe Consequences of Defects in DNA Repair Mechanisms 315
- Detecting Mutagens 316
- Worked-Out Problems** 318
- Summary** 320
- Problems and Questions** 320

CHAPTER 12

Transposable Elements 322

- Bacterial Transposons 323
 - Insertion Sequences: The Simplest Transposons 324
 - More Complex Transposons 325
 - Mechanisms of Transposition 326
 - Transposons as Mutagenic Agents 328
 - Bacterial Use of Site-Specific Recombination 329
- Eukaryotic Transposable Elements 332
 - The First Examples of Transposable Elements 332
 - Yeast and *Drosophila* Transposons 333
 - Retroviruses 334
 - Transposons and the Mutability of Chromosomes 337
- Worked-Out Problem** 338
- Summary** 338
- Problems and Questions** 338

CHAPTER 13

Genetics of Bacteria and Phages 340

- Working with Bacteria 341
- Bacterial Conjugation 343
 - Bacterial Transfer of DNA 343
- Hfr Strains 345
- F Plasmid Insertion into the Host Chromosome 346

Mapping by Interrupted Conjugation	346
Completion of Conjugation	350
Genetic Mapping with <i>E. coli</i>	350
F' Plasmids	351
The <i>Cis-Trans</i> Complementation Test	352
Transduction	354
Genetics of T-Even Phages	358
Structure and Growth of T-Even Phages	358
Phage Phenotypes and Phage Genetics	360
Fine Structure Mapping	362
Applying the <i>Cis-Trans</i> Test to the <i>rII</i> Region	363
Worked-Out Problems	365
Summary	366
Problems and Questions	367

CHAPTER 14

Developmental Genetics 369

The Genetic Basis of Cell Differentiation	370
Mosaic Development and Regulative Development	371
Determinants	372
Inducers	374
Morphogens	374
Levels of Gene Expression Control	375
Transcriptional Control	376
Posttranscriptional Control	378
Translational Control	378
Posttranslational Control	379
Mechanisms of Transcription Control	379
Activation of Genes by Hormones	379
Light-Induction of Plant Genes	381
The Nature of Determination	382
Developmental Activation of Genes and DNase Hypersensitivity	382
Control of the 5S rRNA Genes in <i>Xenopus laevis</i>	384
The Role of DNA Methylation	385
Developmental Genetics of the Fruit Fly <i>Drosophila</i>	386
Embryogenesis	386
A Sequential Hierarchy of Gene Activity	389
Signal Transduction Pathways	400
Epistasis and Development	404
Determination in the Roundworm	407
Gene Rearrangement during Development	407
Rearrangement of Immunoglobulin Genes	408
Rearrangement of Trypanosome Coat Genes	409
Genomic Imprinting	410
Worked-Out Problems	412
Summary	413
Problems and Questions	414

CHAPTER 15

Gene Cloning and Manipulation 415

Gene Cloning	416
The Role of Restriction Endonucleases	416
Vectors	417
Identifying a Specific Clone with a Specific Probe	425
cDNA Cloning	425
Methods of Expressing Cloned Genes	426
Expression Vectors	427
Manipulating Cloned Genes	431
Protein Engineering with Cloned Genes	431
Using Cloned Genes as Probes	433
Analyzing the Base Sequence of a Gene	436
DNA Sequencing: The Ultimate in Genetic Mapping	440
Physical Mapping	441
Worked-Out Problems	441, 444
Summary	445
Problems and Questions	445

CHAPTER 16

Applications of Gene Cloning and Advanced Genetic Mapping 448

Uses for the Products of Cloned Genes	449
Proteins: The New Pharmaceutical Frontier	449
Improved Vaccines and AIDS	449
Using Cloned Genes in Medicine and Agriculture	450
Intervening in Human Genetic Disease	450
Problems with Human Gene Therapy	451
Using Cloned Genes in Agriculture	452
Protein Products from Transgenic Organisms	454
Genetically Engineered Crops	455
Mapping the Human Genome	457
Tools for Mapping Large Genomes	458
Knockouts	465
Mapping Human Disease Genes	468
Huntington's Disease	468
Cystic Fibrosis	472
Duchenne Muscular Dystrophy	475
DNA Fingerprinting and DNA Typing	475
Forensic Uses of DNA Fingerprinting and DNA Typing	477
Worked-Out Problems	478
Summary	480
Problems and Questions	480

CHAPTER 17

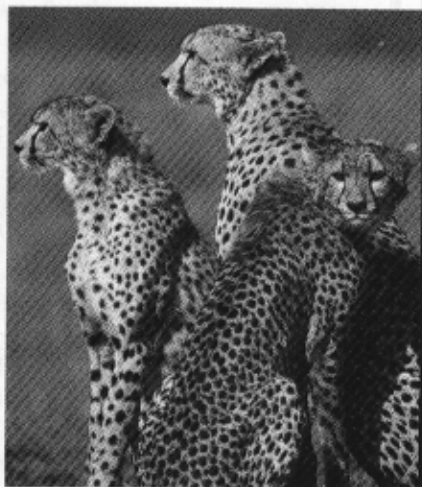

Genes and Cancer 482

- Characteristics of Cancer Cells 483
- The Causes of Cancer 483
 - Carcinogens as Mutagens 483
- Viruses and Cancer 485
 - Tumor Virus Molecular Genetics 486
 - Conversion of Cellular Proto-Oncogenes to Oncogenes 489
- The Functions of Proto-Oncogenes 493
 - Oncogene Products and Growth Factors 494
 - The *c-src* Product: Tyrosine Protein Kinase 494
 - The *c-Ha-ras* Gene Product: A G Protein 495
 - Oncogene Products as Transcription Factors 497
 - Oncogenes and Growth Control 498
- Tumor Suppressor Genes 498
 - Somatic Cell Genetics 498
 - The Malignant Phenotype as a Recessive Trait 498
 - The Retinoblastoma Gene 499
 - The p53 Gene 501
 - Other Tumor Suppressor Genes 501
- Summary 502
- Problems and Questions 502

CHAPTER 18

Extranuclear Inheritance 504

- Cytoplasmic Inheritance 505
 - Inheritance of Chloroplast Genes 505
 - Non-Mendelian Inheritance of Leaf Color in *Mirabilis* 506

- Inheritance of Mitochondrial Genes 508
- "Maternal Effect" versus Maternal Inheritance 512
- Mapping in Mitochondria and Chloroplasts 514
 - Recombination Mapping in Yeast Mitochondria 514
 - Petite Mapping in Yeast Mitochondria 514
- Worked-Out Problems 517
 - Mapping Chloroplast Genes 517
- Molecular Genetics of Organelles 518
 - Circular Chloroplast Genomes 518
 - Molecular Mapping of Chloroplast Genomes 519
 - Molecular Mapping of Mitochondrial Genomes 522
- The Origin of Mitochondria and Chloroplasts 526
 - The Endosymbiont Hypothesis 527
 - Promiscuous DNA 528
- Summary 528
- Problems and Questions 529

PART

3

POPULATION GENETICS 531

CHAPTER 19

An Introduction to Population Genetics 532

- Types of Genetic Variation 533
- Measuring Genetic Variation 535
- The Hardy-Weinberg Principle 537
 - The Chi-Square Test 540
 - More than Two Alleles 540
 - X-Linked Genes 541
- Inbreeding 542
 - Self-Fertilization 542
 - The Inbreeding Coefficient 543
 - Calculating the Inbreeding Coefficient 543
- Mutation 545
- Genetic Drift 545
- Gene Flow 547
- Natural Selection 549
 - Selection Against a Homozygote 550
 - Heterozygous Advantage 552
- Worked-Out Problems 554
- Summary 554
- Problems and Questions 555

CHAPTER 20**Extensions and Applications
of Population Genetics 557**

- Frequency of Human Genetic Disease 558
 - Mutation-Selection Balance 558
 - Other Factors Affecting Disease Frequency 559
- Molecular Evolution 561
 - Neutrality 561
 - Molecular Clock 562
 - Phylogenetic Trees 563
 - Use of mtDNA in Studying Genetic Relationships 565
 - Multigene Families 566
- Conservation Genetics 566
 - Crop Species 566
 - Inbreeding Depression 568
 - Loss of Genetic Variation 569

- Animal and Plant Breeding 570
 - Artificial Selection 570
 - Inbred Lines 572
 - Heterosis 573
- Pesticide Resistance 575
 - Factors Important in Pesticide Resistance 575
 - Examples of Pesticide Resistance 576
 - Control of Pesticide Resistance 577
- Worked-Out Problems 577**
- Summary 578**
- Problems and Questions 578**

- Appendix A: Answers to End-of-Chapter Problems and Questions 581
- Appendix B: Selected Readings 602
- Appendix C: Explorations in Cell Biology and Genetics CD-ROM 607
- Glossary 611
- Credits 627
- Index 629
