

Contents

Preface ix

Part I

Levels of Organization

Chapter 1 Size and complexity

1.1 Atomic organization 2 Ions Isotopes ■ **1.2 Molecular organization 5** Ionic bonding Hydrogen bonds ■ **1.3 Cellular organization 7** ■ **1.4 Colonial organization 8** ■ **1.5 Tissue organization 8** ■ **1.6 Organ level of organization 9** ■ **1.7 Social level of organization 9**

Chapter 2 Molecular organization

2.1 Inorganic ions 10 ■ **2.2 Carbohydrates 12** ■
2.3 Monosaccharides 12 Structure of monosaccharides ■
2.4 Disaccharides 16 ■ **2.5 Polysaccharides 17** Starch Glycogen
Cellulose Other polysaccharides Reducing and non-reducing sugars
■ **2.6 Lipids 20** Fatty acids Phospholipids Waxes Functions of
lipids Steroids ■ **2.7 Proteins 24** Amino acids Formation of
polypeptides Structure of polypeptides Fibrous proteins Globular
proteins Conjugated proteins Denaturation of proteins ■
2.8 Nucleic acids 32 ■ **2.9 Questions 33**

Chapter 3 Enzymes

3.1 Enzyme structure and function 35 Enzymes and activation energy
Mechanism of enzyme action ■ **3.2 Properties of enzymes 37**
Specificity Reversibility Enzyme concentration
Substrate concentration Temperature pH Inhibition ■
3.3 Enzyme cofactors 41 Activators Coenzymes Prosthetic groups
■ **3.4 Classification of enzymes 42** ■ **3.5 Control of metabolic
pathways 43** ■ **3.6 Questions 44**

Chapter 4 Cellular organization

4.1 Cytology – the study of cells 47 The structure of prokaryotic cells
Structure of the eukaryotic cell Differences between plant and animal
cells ■ **4.2 Cell ultrastructure 51** Cytoplasmic matrix Cell membrane
The nucleus The chloroplast The mitochondrion Endoplasmic
reticulum Golgi apparatus (dictyosome) Lysosomes Microbodies
(peroxisomes) Vacuoles Ribosomes Storage granules
Microtubules Cilia and flagella Centrioles Microfilaments
Microvilli Cellulose cell wall ■ **4.3 Movement in and out of cells 66**
Diffusion Facilitated diffusion Osmosis Active transport
Phagocytosis Pinocytosis ■ **4.4 Questions 71**

Chapter 5 Classification of organisms

5.1 Principles of classification 74 Taxonomic ranks ■ **5.2 Viruses 75**
Transmission of viruses Retroviruses Economic importance of viruses
■ **5.3 Prokaryotae 79** Bacteria Economic importance of viruses ■

5.4 Fungi 81 Economic importance of fungi ■ 5.5 Protocista 83 Algae
Economic importance of algae ■ 5.6 Plantae 85 Bryophyta
Filicinophyta (ferns) Angiospermophyta ■ 5.7 Animalia (animals) 87
Phylum Cnidaria Phylum Platyhelminthes Phylum Annelida
Phylum Arthropoda Phylum Mollusca Phylum Chordata
■ 5.8 Questions 96

Part II

The Continuity of Life

Chapter 6 Inheritance in context

Chapter 7 DNA and the genetic code

7.1 Evidence that the nucleus contains the hereditary material 103 ■
7.2 Evidence that DNA is the hereditary material 103 Chromosome
analysis Metabolic stability of DNA Constancy of DNA within a cell
Correlation between mutagens and their effects on DNA Experiments
on bacterial transformation Experiments to identify the transforming
principle Transduction experiments ■ 7.3 Nucleic acids 107
Structure of nucleotides Ribonucleic acid (RNA) Deoxyribonucleic
acid (DNA) Differences between RNA and DNA ■
7.4 DNA replication 111 ■ 7.5 The genetic code 113 ■ 7.6 Protein
synthesis 114 Synthesis of amino acids Transcription (formation of
messenger RNA) Amino acid activation Translation ■ 7.7 Gene
expression and control 117 ■ 7.8 Genetic engineering 119
Recombinant DNA technology Techniques used to manipulate DNA
Gene cloning Applications of genetic engineering Implications of
genetic engineering ■ 7.9 Genetic fingerprinting 127 ■
7.10 Questions 129

Chapter 8 Cell division

8.1 Chromosomes 133 Chromosome structure Chromosome number
■ 8.2 Mitosis 134 Differences between mitosis in plant and animal
cells ■ 8.3 Meiosis (reduction division) 138 ■ 8.4 Comparison of
mitosis and meiosis 142 ■ 8.5 The significance of cell division 142
Significance of mitosis Significance of meiosis ■ 8.6 Questions 146

Chapter 9 Heredity and genetics

9.1 Mendel and the laws of inheritance 149 Monohybrid inheritance
(Mendel's Law of Segregation) Representing genetic crosses Genetic
representation of the monohybrid cross Genes and alleles Dihybrid
inheritance (Mendel's Law of Independent Assortment) Genetic
representation of the dihybrid cross ■ 9.2 The test cross 156 ■
9.3 Sex determination 157 ■ 9.4 Linkage 158 Crossing over and
recombination Sex linkage ■ 9.5 Allelic interaction 166
Codominance Partial dominance Multiple alleles Pleiotropy and
lethal alleles ■ 9.6 Gene interaction 169 Simple interaction Epistasis
Polygenes ■ 9.7 Questions 172

Chapter 10 Genetic change and variation

10.1 Methods of recording variation 177 Table of data Line graph
Histogram Bar graph Kite graph Pie chart ■ 10.2 Types of
variation 179 Continuous variation The normal distribution
(Gaussian) curve Discontinuous (discrete) variation ■
10.3 The chi-squared test 181 ■ 10.4 Origins of variation 184
Environmental effects Reshuffling of genes Changes in gene
structure (point mutations) Changes in whole sets of chromosomes
Changes in chromosome number Changes in chromosome structure
■ 10.5 Causes of mutations 190 ■ 10.6 Genetic screening and
counselling 190 Gene tracking ■ 10.7 Questions 193

Chapter 11 Evolution

11.1 Population genetics 196 Heterozygotes as reservoirs of genetic variation (the Hardy-Weinberg principle) Genetic drift ■
11.2 Evolution through natural selection (Darwin/Wallace) 198 ■
11.3 Natural selection 200 Types of selection Polymorphism
 Drug and pesticide resistance Heavy metal tolerance in plants ■
11.4 Artificial selection 204 ■ **11.5 Isolation mechanisms 205**
 Allopatric speciation Sympatric speciation ■ **11.6 Questions 208**

Chapter 12 Reproduction, development and growth

12.1 Comparison of asexual and sexual reproduction 211 ■
12.2 Asexual reproduction 213 Binary or multiple fission Budding
 Fragmentation Sporulation Vegetative propagation Cloning
 Parthenogenesis ■ **12.3 Reproduction in flowering plants 216** Floral
 structure Pollination ■ **12.4 Fertilization and development in
 flowering plants 222** Methods of preventing inbreeding Development
 of fruits and seeds Dormancy Germination and early growth in
 flowering plants ■ **12.5 Reproduction in mammals 225** Gametogenesis
 Human male reproductive system Human female reproductive
 system ■ **12.6 Sexual cycles 229** The menstrual cycle Hormonal
 control of the menstrual cycle Artificial control of the menstrual cycle
 Male sex hormones Factors affecting breeding cycles ■ **12.7
 Fertilization and development in mammals 235** Courtship Mating
 Semen Fertilization Causes of infertility and its cures Implantation
 The placenta Functions of the placenta Birth (parturition) Lactation
 Parental care ■ **12.8 Growth 244** Measurement of growth Growth
 patterns Rate of growth Meristems Growth and metamorphosis in
 insects ■ **12.9 Questions 251**

Part III

Energetics

Chapter 13 Energy and organisms

13.1 First law of thermodynamics 258 ■ **13.2 Second law of
 thermodynamics 258** ■ **13.3 Energy and life 259**

Chapter 14 Autotrophic nutrition (photosynthesis)

14.1 Leaf structure 261 Adaptations for obtaining energy (sunlight)
 Adaptations for obtaining and removing gases Adaptations for
 obtaining and removing liquids ■ **14.2 Mechanism of light
 absorption 265** The nature of light The photosynthetic pigments
 Absorption and action spectra ■ **14.3 Mechanism of photosynthesis
 267** Light harvesting Light dependent stage (photolysis) The light
 independent stage Fate of photosynthetic products ■ **14.4 Factors
 affecting photosynthesis 272** Concept of limiting factors Effect of
 light intensity on the rate of photosynthesis Effect of carbon dioxide
 concentration on the rate of photosynthesis Effect of temperature on
 the rate of photosynthesis Effect of inorganic ions on the rate of
 photosynthesis Other factors affecting the rate of photosynthesis ■
14.5 Chemosynthesis 276 ■ **14.6 Questions 277**

Chapter 15 Heterotrophic nutrition

15.1 Holozoic nutrition 283 ■ **15.2 Diet 283** Carbohydrates and fats
 (energy requirements) Proteins Vitamins Minerals Water
 Dietary fibre (roughage) Milk ■ **15.3 Principles of digestion 287** ■
15.4 Digestion in humans 290 Digestion in the mouth Swallowing
 and peristalsis Digestion in the stomach Digestion in the small
 intestine Absorption and assimilation Water reabsorption in the
 large intestine Elimination (egestion) ■ **15.5 Nervous and hormonal**

Chapter 16

Cellular respiration

control of secretions 296 ■ 15.6 Parasitism 299 *Plasmodium* (malarial parasite) Parasitic flatworms ■ 15.7 Saprobiontism 303 Extracellular digestion by saprobionts Economic importance of saprobionts ■ 15.8 Mutualism 304 Digestion of cellulose by microorganisms Mutualism and the nitrogen cycle ■ 15.9 Questions 306

16.1 Adenosine triphosphate (ATP) 308 Structure of ATP Importance of ATP Uses of ATP ■ 16.2 Glycolysis 310 ■ 16.3 Krebs (tricarboxylic acid) cycle 311 Importance of Krebs cycle ■ 16.4 Electron transport system 313 Mitochondria and oxidative phosphorylation ■ 16.5 Anaerobic respiration (anaerobiosis) 317 Alcoholic fermentation Lactate fermentation ■ 16.6 Comparison of energy yields 318 ■ 16.7 Alternative respiratory substrates 319 Respiration of fat Respiration of protein ■ 16.8 Respiratory quotients 321 ■ 16.9 Questions 322

Chapter 17

Energy and the ecosystem

17.1 Energy flow through the ecosystem 326 Food chains Food webs Primary producers Consumers Decomposers and detritivores Ecological pyramids ■ 17.2 The cycling of nutrients 331 The carbon cycle The nitrogen cycle ■ 17.3 Ecological factors and their effects on distribution 335 Edaphic factors Climatic factors Biotic factors Species diversity index ■ 17.4 Ecological techniques 340 Measurement of environmental parameters Sampling methods Collecting methods ■ 17.5 Estimating population size 345 Using quadrats Capture-recapture techniques Abundance scales ■ 17.6 Populations and communities 346 Population growth Density-dependent growth Density-independent growth Regulation of population size Control of human populations Competition Predation Competitive exclusion principle Biological control Communities and succession ■ 17.7 Questions 354

Chapter 18

Human activities and the ecosystem

18.1 The impact of pre-industrial humans on the environment 358 Humans as hunters Humans as shepherds Humans as farmers ■ 18.2 Exploitation of natural resources 360 Renewable resources Non-renewable resources ■ 18.3 Pollution 363 ■ 18.4 Air pollution 363 Smoke Sulphur dioxide Carbon dioxide Carbon monoxide Nitrogen oxides Lead Control of air pollution Ozone depletion ■ 18.5 Water pollution 367 Sewage and its disposal Toxic chemicals Eutrophication by sewage and fertilizer Oil Thermal pollution ■ 18.6 Terrestrial pollution 374 The dumping of wastes and deposits Pesticides ■ 18.7 The impact of agriculture on the environment 377 ■ 18.8 Conservation 379 Endangered species Conservation methods ■ 18.9 Questions 382

Part IV

Transport and Exchange Mechanisms

Chapter 19

Why organisms need transport and exchange mechanisms

Chapter 20

Gaseous exchange

20.1 Respiratory surfaces 391 ■ 20.2 Mechanisms of gaseous exchange 391 Small organisms Flowering plants Insects Bony fish Mammals ■ 20.3 Control of ventilation in humans 400 ■ 20.4 Measurements of lung capacity 401 ■ 20.5 Questions 403

Chapter 21**Blood and circulation
(transport in animals)****21.1 Structure of blood 405 ■ 21.2 Functions of blood 406**

Respiratory pigment – haemoglobin Transport of oxygen Transport of carbon dioxide Clotting of the blood Defence against infection – phagocytosis ■ **21.3 The immune system 412** Self and non-self antigens Monoclonal antibodies and their applications Types of immunity and immunization Acquired Immune Deficiency Syndrome (AIDS) Blood groups Chemotherapy and immunity ■ **21.4 The circulatory system 422** Blood vessels Mammalian circulatory system ■ **21.5 Heart structure and action 424** Structure of the mammalian heart Control of heart beat (cardiac cycle) Factors modifying heart beat Maintenance and control of blood pressure Heart disease ■ **21.6 Lymphatic system 430** Tissue fluid and its formation ■ **21.7 Questions 432**

Chapter 22**Uptake and transport in plants**

22.1 The water molecule 435 Structure of the water molecule Polarity and hydrogen bonding Thermal properties Dissociation, pH and buffers Colloids Cohesion and surface tension Adhesion and capillarity The importance of water to living organisms ■ **22.2 Simple plant tissues 439** Parenchyma Collenchyma Sclerenchyma ■ **22.3 Water relations of a plant cell 441** ■ **22.4 Transpiration 443** Stomatal mechanism Movement of water across the leaf Structure of xylem Movement of water up the stem Xylem structure related to its role of water transport Measurement of transpiration ■ **22.5 Factors affecting transpiration 450** External factors affecting transpiration Internal factors affecting transpiration Xerophytic adaptations ■ **22.6 Uptake of water by roots 452** Root structure Mechanisms of uptake Root pressure ■ **22.7 Uptake and translocation of minerals 457** Mechanisms of mineral uptake Transport of minerals in the xylem ■ **22.8 Translocation of organic molecules 458** Evidence for transport of organic material in the phloem Structure of phloem sieve tubes Mechanisms of translocation in phloem ■ **22.9 Questions 463**

Chapter 23**Osmoregulation and excretion**

23.1 Introduction 468 ■ **23.2 Excretory products 468** Ammonia Urea Uric acid ■ **23.3 Osmoregulation and excretion in animals 469** Protozoa Insects Fish ■ **23.4 The mammalian kidney 472** Gross structure of the kidney Structure of the nephron Functions of the nephron ■ **23.5 Hormonal control of osmoregulation and excretion 479** Antidiuretic hormone (ADH) Aldosterone ■ **23.6 Questions 482**

Part V**Coordination, Response and Control****Chapter 24****How control systems developed****Chapter 25****Homeostasis**

25.1 Principles of homeostasis 491 Control mechanisms and feedback ■ **25.2 Temperature control 493** Ectothermy and endothermy Structure of the skin Maintenance of a constant body temperature in warm environments Maintenance of a constant body temperature in cold environments Role of the hypothalamus in the control of body temperature ■ **25.3 Control of blood sugar 499** ■ **25.4 Control of respiratory gases 501** ■ **25.5 Control of blood pressure 501** ■ **25.6 Cellular homeostasis 501** ■ **25.7 The liver 502** Structure of the liver Functions of the liver ■ **25.8 Questions 507**

Chapter 26**The endocrine system**

26.1 Principles of endocrine control 509 Chemistry of hormones
 Nature of hormone action ■ 26.2 The pituitary gland 511 The anterior
 pituitary The posterior pituitary Release of pituitary hormones ■
 26.3 The hypothalamus 512 ■ 26.4 The thyroid gland 513 ■
 26.5 The adrenal glands 515 The adrenal cortex The adrenal medulla
 ■ 26.6 The pancreas 517 ■ 26.7 Other hormone-like substances 519
 Pheromones Prostaglandins Endorphins (natural opiates) ■
 26.8 Questions 521

Chapter 27**The nervous system**

27.1 Nervous tissue and the nerve impulse 523 Resting potential
 Action potential Ion movement Refractory period Transmission of
 the nerve impulse ■ 27.2 The synapse 531 Structure of the synapse
 Synaptic transmission Functions of synapses ■ 27.3 The reflex arc
 535 ■ 27.4 The autonomic nervous system 537 ■ 27.5 The central
 nervous system 538 The spinal cord Structure of the brain Functions
 of the brain Comparison of endocrine and nervous systems ■
 27.6 Sensory perception 543 The mammalian eye Role of the brain in
 vision ■ 27.7 Behaviour 548 Reflexes, kineses and taxes Innate
 behaviour Learned behaviour Reproductive behaviour Social
 behaviour ■ 27.8 Questions 553

Chapter 28**Muscular movement and support**

28.1 Structure of skeletal muscle 557 The neuromuscular junction ■
 28.2 Muscular contraction 559 Mechanism of muscular contraction –
 the sliding filament theory Summary of muscle contraction ■
 28.3 Skeletons and support 562 Types of skeleton Structure of bone
 Joints ■ 28.4 Questions 567

Chapter 29**Control systems in plants**

29.1 Plant responses 569 Tropisms Taxes ■ 29.2 Plant hormones
 570 Auxins Gibberellins Cytokinins Absciscic acid Ethene ■
 29.3 Control of flowering 575 The phytochrome system
 Photoperiodism ■ 29.4 Questions 581

Chapter 30**Biotechnology**

30.1 Growth of microorganisms 584 Factors affecting growth Growth
 patterns Culture media Aseptic conditions ■ 30.2 Industrial
 fermenters and fermentation 588 Batch versus continuous cultivation
 Fermenter design The operation and control of fermenters
 Sterilization during and after fermentation Immobilization of cells and
 enzymes ■ 30.3 Biotechnology and food production 594 Baking
 Beer and wine production Dairy products Single cell protein (SCP)
 Other foods produced with the aid of biotechnology Enzymes
 associated with the food industry ■ 30.4 Biotechnology and
 pharmaceuticals 599 Antibiotics Hormones ■ 30.5 Biotechnology
 and fuel production 601 Gasohol production Biogas production ■
 30.6 Biotechnology and waste disposal 603 Sewage disposal
 Biodegradable plastics Disposal of oil Disposal of industrial wastes
 Recovery of valuable material from low-level sources including wastes
 ■ 30.7 Other products of the biotechnology industry 606 ■
 30.8 Cell, tissue and organ culture 608 Plant cell, tissue and organ
 culture Applications of plant cell, tissue and organ culture
 Animal cell culture Applications of animal cell cultures ■
 30.9 Questions 611

Further questions 614**Index 621**
