

Preface	xv
Acknowledgments	xxiii
About the Authors	xxvi
In Memoriam	xxvii
About the Cover	xxviii

1 Genes, Genomes, and Genetic Analysis 1

1.1 DNA: The Genetic Material 2	
Experimental Proof of the Genetic Function of DNA 3	
Genetic Role of DNA in Bacteriophage 4	
1.2 DNA Structure and Replication 6	
An Overview of DNA Replication 9	
1.3 Genes and Proteins 10	
Inborn Errors of Metabolism as a Cause of Hereditary Disease 10	
1.4 Genetic Analysis 14	
Mutant Genes and Defective Proteins 15	
Complementation Test for Mutations in the Same Gene 17	
	Analysis of Complementation Data 20
	Other Applications of Genetic Analysis 20
1.5 Gene Expression: The Central Dogma 21	
Transcription 23	
Translation 24	
The Genetic Code 25	
1.6 Mutation 26	
1.7 Genes and Environment 28	
1.8 The Molecular Unity of Life 29	
Prokaryotes and Eukaryotes 30	
Evolutionary Relationships Among Eukaryotes 31	
Genomes and Proteomes 32	

2 DNA Structure and Genetic Variation 38

2.1 Genetic Differences Among Individuals 39	
DNA Markers as Landmarks in Chromosomes 39	
2.2 The Molecular Structure of DNA 40	
Polynucleotide Chains 41	
Base Pairing and Base Stacking 43	
Antiparallel Strands 45	
DNA Structure as Related to Function 46	
2.3 The Separation and Identification of Genomic DNA Fragments 47	
Restriction Enzymes and Site-Specific DNA Cleavage 48	
Gel Electrophoresis 50	
Nucleic Acid Hybridization 52	
The Southern Blot 54	
2.4 Selective Replication of Genomic DNA Fragments 55	
	Constraints on DNA Replication: Primers and 5'-to-3' Strand Elongation 56
	The Polymerase Chain Reaction 57
2.5 The Terminology of Genetic Analysis 60	
2.6 Types of DNA Markers Present in Genomic DNA 62	
Single-Nucleotide Polymorphisms (SNPs) 62	
Restriction Fragment Length Polymorphisms (RFLPs) 63	
Tandem Repeat Polymorphisms 66	
Copy-Number Polymorphisms (CNPs) 68	
2.7 Applications of DNA Markers 68	
Genetic Markers, Genetic Mapping, and "Disease Genes" 68	
Other Uses for DNA Markers 69	

3 Transmission Genetics: The Principle of Segregation 77

- 3.1 Morphological and Molecular Phenotypes 78**
- 3.2 Segregation of a Single Gene 80**
 - Phenotypic Ratios in the F_2 Generation 82
 - The Principle of Segregation 83
 - Verification of Segregation 85
 - The Testcross and the Backcross 86
- 3.3 Segregation of Two or More Genes 87**
 - The Principle of Independent Assortment 88
 - The Testcross with Unlinked Genes 88
 - Three or More Genes 89
- 3.4 Probability in Genetic Analysis 90**
 - Elementary Outcomes and Events 92
 - Probability of the Union of Events 93
 - Probability of the Intersection of Events 93
 - Conditional Probability 94
 - Bayes' Theorem 96
- 3.5 Human Pedigree Analysis 97**
 - Characteristics of Dominant and Recessive Inheritance 97
 - Most Human Genetic Variation is Not "Bad" 99
 - Molecular Markers in Human Pedigrees 100
- 3.6 Incomplete Dominance and Epistasis 101**
 - Multiple Alleles 102
 - Human ABO Blood Groups 103
 - Epistasis 105

4 Chromosomes and Sex-Chromosome Inheritance 114

- 4.1 The Stability of Chromosome Complements 115**
- 4.2 Mitosis 116**
- 4.3 Meiosis 119**
 - The First Meiotic Division: Reduction 124
 - The Second Meiotic Division: Equation 128
- 4.4 Sex-Chromosome Inheritance 128**
 - Chromosomal Determination of Sex 128
 - X-Linked Inheritance 129
 - Pedigree Characteristics of Human X-linked Inheritance 133
 - Heterogametic Females 133
 - Nondisjunction as Proof of the Chromosome Theory of Heredity 134
 - Sex Determination in *Drosophila* 135
- 4.5 Probability in the Prediction of Progeny Distributions 136**
 - Using the Binomial Distribution in Genetics 136
 - Meaning of the Binomial Coefficient 138
- 4.6 Testing Goodness of Fit to a Genetic Hypothesis 139**
 - The Chi-Square Method 139
 - Are Mendel's Data Too Good to Be True? 143

5 Genetic Linkage and Chromosome Mapping 150

- 5.1 Linkage and Recombination of Genes in a Chromosome 151**
 - Coupling Versus Repulsion of Syntenic Alleles 153
 - The Chi-Square Test for Linkage 153
 - Each Pair of Linked Genes Has a Characteristic Frequency of Recombination 154
 - Recombination in Females Versus Males 155
- 5.2 Genetic Mapping 155**
 - Map Distance and Frequency of Recombination 156
 - Crossing over 159
 - Recombination Between Genes Results from a Physical Exchange Between Chromosomes 159
 - Crossing over Takes Place at the Four-Strand Stage of Meiosis 161
 - Multiple Crossovers 164
- 5.3 Genetic Mapping in a Three-Point Testcross 166**
 - Chromosome Interference in Double Crossovers 167
 - Genetic Mapping Functions 168
 - Genetic Map Distance and Physical Distance 169

- 5.4 Genetic Mapping in Human Pedigrees 170**
Maximum Likelihood and Lod Scores 170
- 5.5 Mapping by Tetrad Analysis 173**
Analysis of Unordered Tetrads 173
Genetic Mapping with Unordered Tetrads 175
Analysis of Ordered Tetrads 177

- 5.6 Special Features of Recombination 180**
Recombination Within Genes 180
Mitotic Recombination 181

6 Molecular Biology of DNA Replication and Recombination 190

- 6.1 Problems of Initiation, Elongation, and Incorporation Error 191**
- 6.2 Semiconservative Replication of Double-Stranded DNA 192**
The Meselson-Stahl Experiment 192
Semiconservative Replication of DNA in Chromosomes 194
Theta Replication of Circular DNA Molecules 196
Rolling-Circle Replication 198
Multiple Origins and Bidirectional Replication in Eukaryotes 198
- 6.3 Unwinding, Stabilization, and Stress Relief 200**
- 6.4 Initiation by a Primosome Complex 201**
- 6.5 Chain Elongation and Proofreading 202**
- 6.6 Discontinuous Replication of the Lagging Strand 204**
Fragments in the Replication Fork 204
The Joining of Precursor Fragments 205
- 6.7 Terminator Sequencing of DNA 207**
Sanger Sequencing 208
Massively Parallel Sequencing 209
- 6.8 Molecular Mechanisms of Recombination 210**
Gene Conversion and Mismatch Repair 211
Double-Strand Break and Repair Model 212

7 Molecular Organization of Chromosomes 221

- 7.1 Genome Size and Evolutionary Complexity: The C-Value Paradox 222**
- 7.2 The Supercoiling of DNA 223**
Topoisomerase Enzymes 224
- 7.3 The Structure of Bacterial Chromosomes 226**
- 7.4 The Structure of Eukaryotic Chromosomes 226**
The Nucleosome: The Structural Unit of Chromatin 226
The Nucleosome Core Particle 226
Chromosome Territories in the Nucleus 229
Chromosome Condensation 230
- 7.5 Polytene Chromosomes 232**
- 7.6 Repetitive Nucleotide Sequences in Eukaryotic Genomes 232**
Kinetics of DNA Renaturation 233
Analysis of Genome Size and Repetitive Sequences by Renaturation Kinetics 235
- 7.7 Unique and Repetitive Sequences in Eukaryotic Genomes 237**
Unique Sequences 238
Highly Repetitive Sequences 238
Middle-Repetitive Sequences 239
- 7.8 Molecular Structure of the Centromere 239**
- 7.9 Molecular Structure of the Telomere 241**

8 Human Karyotypes and Chromosome Behavior 251

- 8.1 The Human Karyotype 252**
Standard Karyotypes 252
The Centromere and Chromosome Stability 255
Dosage Compensation of X-Linked Genes 256
The Calico Cat 259
- Pseudoautosomal Inheritance 259
Active Genes in the "Inactive" X Chromosome 260
Gene Content and Evolution of the Y Chromosome 260
Tracing Human History Through the Y Chromosome 262

8.2 Chromosome Abnormalities in Human Pregnancies 264

Down Syndrome and Other Viable

Trisomie 266

Trisomic Segregation 267

Sex-Chromosome Abnormalities 268

Environmental Effects on

Nondisjunction 269

8.3 Chromosomal Deletions and Duplications 269

Deletions 270

Deletion Mapping 271

Duplications 273

Unequal Crossing Over in Red-Green

Color Blindness 273

8.4 Genetics of Chromosomal Inversions 275

Paracentric Inversion (Not Including the

Centromere) 275

Pericentric Inversion (Including the Centromere) 277

8.5 Chromosomal Translocations 277

Reciprocal Translocations 278

Genetic Mapping of a Translocation

Breakpoint 278

Robertsonian Translocations 280

Translocations and Trisomy 21 281

Translocation Complexes in *Oenothera* 282

8.6 Genomic Position Effects on Gene Expression 282

8.7 Polyploidy in Plant Evolution 284

Sexual Versus Asexual Polyploidization 285

Autopolyploids and Allopolyploids 286

Monoploid Organisms 288

8.8 Genome Evolution in the Grass Family (Gramineae) 289

9 Genetics of Bacteria and Their Viruses 295

9.1 Mobile DNA 296

Plasmids 296

The F Plasmid: A Conjugative Plasmid 297

Insertion Sequences and Transposons 298

Mobilization of Nonconjugative Plasmids 299

Integrans and Antibiotic-Resistance

Cassettes 300

Pathogenicity Islands 301

Multiple-Antibiotic-Resistant Bacteria 302

9.2 Bacterial Genetics 302

Mutant Phenotypes 302

Mechanisms of Genetic Exchange 303

9.3 DNA-Mediated Transformation 303

9.4 Conjugation 305

Cointegrate Formation and Hfr Cells 305

Time-of-Entry Mapping 306

F' Plasmids 311

9.5 Transduction 312

The Phage Lytic Cycle 312

Generalized Transduction 313

9.6 Bacteriophage Genetics 316

Plaque Formation and Phage Mutants 317

Genetic Recombination in the

Lytic Cycle 318

Genetic and Physical Maps of Phage T4 319

Fine Structure of the *rII* Gene in

Bacteriophage T4 321

9.7 Lysogeny and Specialized Transduction 325

Site-Specific Recombination and Lysogeny 326

Specialized Transduction 332

10 Molecular Biology of Gene Expression 341

10.1 Amino Acids, Polypeptides, and Proteins 342

10.2 Colinearity Between Coding Sequences and Polypeptides 344

10.3 Transcription 344

Overview of RNA Synthesis 344

Types of RNA Polymerase 346

Promoter Recognition 347

Mechanism of Transcription 348

Genetic Evidence for Promoters and

Terminators 350

10.4 Messenger RNA 350

10.5 RNA Processing in Eukaryotes 352

5' Capping and 3' Polyadenylation 352

Splicing of Intervening Sequences 352

Characteristics of Human Transcripts 353

Coupling of Transcription and RNA

Processing 354

Mechanism of RNA Splicing 354

Effects of Intron Mutations 357

Exon Shuffle in the Origin of

New Genes 357

10.6 Translation 358

Nonsense-Mediated Decay 359

Initiation by mRNA Scanning 359
Elongation 361
Release 362
Protein Folding and Chaperones 364

10.7 Complex Translation Units 366

Polysomes 366
Polycistronic mRNA 366

10.8 The Standard Genetic Code 368

Genetic Evidence for a Triplet Code 368
How the Code Was Cracked 370
Features of the Standard Code 371
Transfer RNA and Aminoacyl-tRNA
Synthetase Enzymes 371
Redundancy and Wobble 372
Nonsense Suppression 373

11 Molecular Mechanisms of Gene Regulation 380

11.1 Transcriptional Regulation in Prokaryotes 381

Inducible and Repressible Systems of
Negative Regulation 381
Positive Regulation 382

11.2 The Operon System of Gene Regulation 383

Lac⁻ Mutants 383
Inducible and Constitutive Synthesis
and Repression 384
The Repressor 384
The Operator Region 385
The Promoter Region 385
The Operon System of Transcriptional
Regulation 386
Positive Regulation of the Lactose Operon 387
Regulation of the Tryptophan Operon 390

11.3 Regulation Through Transcription Termination 392

Attenuation 392
Riboswitches 394

11.4 Regulation in Bacteriophage Lambda 396

11.5 Transcriptional Regulation in Eukaryotes 398

Galactose Metabolism in Yeast 398
Transcriptional Activator Proteins 401

Transcriptional Enhancers and
Transcriptional Silencers 401
Deletion Scanning 402
The Eukaryotic Transcription Complex 404
Chromatin-Remodeling Complexes 407
Alternative Promoters 407

11.6 Epigenetic Mechanisms of Transcriptional Regulation 409

Cytosine Methylation 411
Methylation and Transcriptional
Inactivation 411
Genomic Imprinting in the Female and
Male Germ Lines 412

11.7 Regulation Through RNA Processing and Decay 413

Alternative Splicing 413
Messenger RNA Stability 414

11.8 RNA Interference 414

11.9 Translational Control 417

Small Regulatory RNAs Controlling
Translation 417

11.10 Programmed DNA Rearrangements 419

Gene Amplification 419
Antibody and T-Cell Receptor Variability 419
Mating-Type Interconversion 422
Transcriptional Control of Mating Type 423

12 Genomics, Proteomics, and Transgenics 431

12.1 Site-Specific DNA Cleavage and Cloning Vectors 432

Production of DNA Fragments with
Defined Ends 432
Recombinant DNA Molecules 434
Plasmid, Lambda, and Cosmid Vectors 434

12.2 Cloning Strategies 436

Joining DNA Fragments 436

Insertion of a Particular DNA Molecule
into a Vector 437

The Use of Reverse Transcriptase: cDNA
and RT-PCR 439

12.3 Detection of Recombinant Molecules 440

Gene Inactivation in the Vector Molecule 440
Cloning of Large DNA Fragments 442
Screening for Particular Recombinants 442

12.4 Genomics and Proteomics 443

- Genomic Sequencing 444
- Genome Annotation 444
- Comparative Genomics 445
- Transcriptional Profiling 447
- Two-Hybrid Analysis of Protein Interactions 452

12.5 Transgenic Organisms 454

- Germ-Line Transformation in Animals 455
- Genetic Engineering in Plants 458

Transformation Rescue 459

Site-Directed Mutagenesis and Knockout Mutations 460

12.6 Some Applications of Genetic Engineering 461

- Giant Salmon with Engineered Growth Hormone 461
- Nutritionally Engineered Rice 462
- Production of Useful Proteins 462
- Genetic Engineering with Animal Viruses 463

13 Genetic Control of Development 471

13.1 Genetic Determinants of Development 472

13.2 Early Embryonic Development in Animals 472

- Autonomous Development and Intercellular Signaling 473
- Composition and Organization of Oocytes 475
- Early Development and Activation of the Zygotic Genome 476

13.3 Genetic Analysis of Development in the Nematode 477

- Analysis of Cell Lineages 478
- Mutations Affecting Cell Lineages 478
- Programmed Cell Death 478
- Loss-of-Function and Gain-of-Function Alleles 480
- Epistasis in the Analysis of Developmental Switches 483

13.4 Genetic Control of Development in *Drosophila* 485

- Maternal-Effect Genes and Zygotic Genes 488
- Genetic Basis of Pattern Formation in Early Development 489
- Coordinate Genes 491
- Gap Genes 493
- Pair-Rule Genes 493
- Segment-Polarity Genes 494
- Interactions in the Regulatory Hierarchy 494
- Metamorphosis of the Adult Fly 496
- Homeotic Genes 498
- HOX* Genes in Evolution 498

13.5 Genetic Control of Development in Higher Plants 500

- Flower Development in *Arabidopsis* 500
- Combinatorial Determination of the Floral Organs 502

14 Molecular Mechanisms of Mutation and DNA Repair 509

14.1 Types of Mutations 510

- Germ-Line and Somatic Mutations 510
- Conditional Mutations 510
- Classification by Function 511

14.2 The Molecular Basis of Mutation 512

- Nucleotide Substitutions 512
- Missense Mutations: The Example of Sickle-Cell Anemia 513
- Insertions, Deletions, and Frameshift Mutations 515
- Dynamic Mutation of Trinucleotide Repeats 516
- Cytosine Methylation and Gene Inactivation 518

14.3 Transposable Elements 520

- Molecular Mechanisms of Transposition 520

Transposable Elements as Agents of Mutation 523

Transposable Elements in the Human Genome 524

RIP: A Defense Against Transposons 525

14.4 Spontaneous Mutation 525

- The Nonadaptive Nature of Mutation 525
- Estimation of Mutation Rates 527
- Hot Spots of Mutation 527

14.5 Mutagens 529

- Depurination 529
- Oxidation 530
- Base-Analog Mutagens 531
- Chemical Agents That Modify DNA 531
- Intercalating Agents 532
- Ultraviolet Irradiation 532
- Ionizing Radiation 533

Genetic Effects of the Chernobyl Nuclear Accident 536

14.6 Mechanisms of DNA Repair 537

Mismatch Repair 538
Base Excision Repair 540
AP Repair 541
Nucleotide Excision Repair 541
Photoreactivation 542

DNA Damage Bypass 542
The SOS Repair System 543

14.7 Reverse Mutations and Suppressor Mutations 543

Intragenic Suppression 543
Intergenic Suppression 544
The Ames Test for Mutagen/Carcinogen Detection 545

15 Molecular Genetics of the Cell Cycle and Cancer 551

15.1 The Cell Cycle 552

Key Events in the Cell Cycle 552
Transcriptional Program of the Cell Cycle 553

15.2 Genetic Analysis of the Cell Cycle 554

Mutations Affecting Progression Through the Cell Cycle 554

15.3 Progression Through the Cell Cycle 557

Cyclins and Cyclin-Dependent Protein Kinases 557
Targets of the Cyclin-CDK Complexes 559
Triggers for the G₁/S and G₂/M Transitions 559
Protein Degradation Helps Regulate the Cell Cycle 561

15.4 Checkpoints in the Cell Cycle 562

The DNA Damage Checkpoint 562
The Centrosome Duplication Checkpoint 567
The Spindle Assembly Checkpoint 567
The Spindle Position Checkpoint 568

15.5 Cancer Cells 569

Oncogenes and Proto-Oncogenes 570
Tumor-Suppressor Genes 573

15.6 Hereditary Cancer Syndromes 575

Defects in Cell-Cycle Regulation and Checkpoints 575
Defects in DNA Repair 578

15.7 Genetics of the Acute Leukemias 578

16 Mitochondrial DNA and Extranuclear Inheritance 587

16.1 Patterns of Extranuclear Inheritance 588

Mitochondrial Genetic Diseases 588
Heteroplasmy 591
Maternal Inheritance and Maternal Effects 592
Tracing Population History Through Mitochondrial DNA 592

16.2 Organelle Heredity 592

RNA Editing 593
The Genetic Codes of Organelles 593

Leaf Variegation in Four-O'Clock Plants 594
Drug Resistance in *Chlamydomonas* 595
Respiration-Defective Mitochondrial Mutants 598
Cytoplasmic Male Sterility in Plants 598

16.3 The Evolutionary Origin of Organelles 600

16.4 Cytoplasmic Transmission of Symbionts 601

16.5 Maternal Effect in Snail Shell Coiling 603

17 Molecular Evolution and Population Genetics 611

17.1 Molecular Evolution 612

Gene Trees 612
Bootstrapping 614
Gene Trees and Species Trees 615
Rates of Protein Evolution 615
Rates of DNA Evolution 616
Origins of New Genes: Orthologs and Paralogs 617

17.2 Population Genetics 618

Allele Frequencies and Genotype Frequencies 619
Random Mating and the Hardy-Weinberg Principle 620
Implications of the Hardy-Weinberg Principle 622
A Test for Random Mating 622

- Frequency of Heterozygous Genotypes 623
- Multiple Alleles 623
- DNA Typing 624
- X-Linked Genes 627
- 17.3 Inbreeding 627**
 - The Inbreeding Coefficient 628
 - Allelic Identity by Descent 629
 - Calculation of the Inbreeding Coefficient from Pedigrees 630
 - Effects of Inbreeding 632
- 17.4 Genetics and Evolution 632**
- 17.5 Mutation and Migration 633**
 - Irreversible Mutation 633
 - Reversible Mutation 634
- 17.6 Natural Selection 634**
 - Selection in a Laboratory Experiment 635
 - Selection in Diploid Organisms 636
 - Components of Fitness 637
 - Selection-Mutation Balance 637
 - Heterozygote Superiority 638
- 17.7 Random Genetic Drift 639**
- 17.8 Tracing Human History Through Mitochondrial DNA 643**

18 The Genetic Basis of Complex Traits 651

- 18.1 Complex Traits 652**
 - Continuous, Categorical, and Threshold Traits 652
 - The Normal Distribution 653
- 18.2 Causes of Variation 655**
 - Genotypic Variation 656
 - Environmental Variation 658
 - Genetics and Environment Combined 658
 - Genotype-by-Environment Interaction and Association 660
- 18.3 Genetic Analysis of Complex Traits 660**
 - The Number of Genes Affecting Complex Traits 661
 - Broad-Sense Heritability 662
 - Twin Studies 663
- 18.4 Artificial Selection 663**
 - Narrow-Sense Heritability 664
 - Phenotypic Change with Individual Selection: A Prediction Equation 665
 - Long-Term Artificial Selection 666
 - Inbreeding Depression and Heterosis 666
- 18.5 Correlation Between Relatives 667**
 - Covariance and Correlation 667
 - The Geometrical Meaning of a Correlation 667
 - Estimation of Narrow-Sense Heritability 668
- 18.6 Heritabilities of Threshold Traits 669**
- 18.7 Identification of Genes Affecting Complex Traits 670**
 - Linkage Analysis in the Genetic Mapping of Quantitative Trait Loci 670
 - The Number and Nature of QTLs 672
 - Candidate Genes for Complex Traits 674

- Answers to Even-Numbered Problems 683**
- Further Reading 701**
- Word Roots 705**
- Concise Dictionary of Genetics and Genomics 709**
- Index 735**
