Introduction FAQs About Biological Anthropology 1

How Old Is the Planet and What Organisms Have Lived on It Over That Time? 1

If Life on Our Planet Has Changed So Much Over Time, What About
the Planet Itself? 3

Have Humans Changed? 3

Where Did Modern Science Come From? 4

Where Is Uzbekistan? 6

Chapter 1 Introduction to Evolutionary Fact and Theory 10

Anthropology Is the Study of Human and Nonhuman Primates 13

Anthropology Is a Scientific Discipline 14

Critical Thinking Is the Systematic Assessment of Information 15

The Scientific Method Is a Way of Testing Ideas About the World Around Us 16

Scientific Investigation Is a Collaborative Process 19

Evolutionary Theory Is the Cornerstone of Anthropology 20

Evolution Is Both Fact and Theory 20

Early Explanations of Life Were Both Philosophical and Religious 21

The Scientific Revolution Opened the Door to Systematic Study of the World 23

Evolutionary Thought Emerged From Scientific Collaboration 24

Charles Darwin Proposed Natural Selection as the Mechanism of Evolution 30

Summary 39

What We Know/Questions That Remain 40

Critical Thinking 41

Resources 42

Chapter 2 Introduction to Genetics and Genomics 44

Heredity Is the Passing of Genetic Information From Generation to Generation 47

DNA Is the Molecule of Heredity 48

DNA Has a Specific Structure 48

DNA Has Three Main Functions 50

Mendel's Basic Model of Inheritance	58
<i>Traits Are Passed From Generation to Generation</i>	58
<i>Mendel's Work Continues to Inform Current Knowledge</i>	60
The Relationship Between Genes and Traits Is Complex	61
<i>Four Ways Genes Produce Traits</i>	62
<i>Are There Specific Genes for Certain Diseases?</i>	63
<i>Most DNA Doesn't Appear to Do Anything!</i>	63
Does DNA Cause Certain Behaviors?	64
Population Genetics Helps Us Understand Evolution	66
Summary	67
What We Know/Questions That Remain	68
Critical Thinking	69
Resources	69

Chapter 3 Basics of Human Biology 72

The Place of Human Beings in Nature	75
<i>Where Do Humans Fit In?</i>	75
<i>How Are Relationships Among Organisms Determined?</i>	75
Human Morphology: The Body's Form and Structure	77
<i>Cells Are the Basic Building Blocks of Organisms</i>	77
<i>Tissues Bind Us Together</i>	77
<i>The Skeleton: Our Basic Form</i>	79
<i>The Musculature Interacts With the Skeleton</i>	83
<i>All Mammals Share Common Skeletal Structures</i>	84
Human Physiology: The Systems of the Body	84
<i>The Circulatory and Respiratory Systems Transport Nutrients and More</i>	85
<i>The Nervous System and Brain Control the Actions of the Body and Assess the Organism's Surroundings</i>	87
<i>The Endocrine System Regulates and Communicates Hormonal Information Throughout the Body</i>	88
<i>The Digestive System Processes Nutrients</i>	90
<i>The Reproductive System Enables Us to Produce Offspring</i>	91
<i>All of These Systems (and More) Are Interconnected</i>	93
Summary	94
What We Know/Questions That Remain	94

Critical Thinking 95

Resources 96

Chapter 4 Modern Evolutionary Theory 98

Evolutionary Change Occurs In Populations In Four Ways 100

Mutations Are Changes in the DNA 102

Gene Flow Is the Movement of Alleles Within and Between Populations 102

Genetic Drift Is a Change in Allele Frequency Across Generations Due to Random Factors 104

Current Concepts of Natural Selection Involve an Understanding of Genetics 106

The Four Processes Do Not Explain All Change 109

Speciation Is the Process by Which New Species Arise 110

Species Can Be Defined in Many Ways 110

Subspecies Are Divisions Within a Species 112

Allopatric Speciation Results From Separation and Isolation 112

Phyletic Gradualism and Punctuated Equilibrium: Different Paces of Change 112

Similarities Can Result From Either Parallel or Convergent Evolution 113

Biodiversity in Evolution: Why We Should Care About Biological Variation 116

Summary 117

What We Know/Questions That Remain 118

Critical Thinking 119

Resources 120

Chapter 5 Primate Behavioral Ecology 122

Comparative Primatology Provides Insights Into Modern Human Behavior 124

The Living Primates Are Widespread and Diverse 124

Comparing the Primates Helps Us Understand Behavior 133

To Study Behavior, We Have to Measure It 133

Specific Methodologies Are Used to Measure Primate Behavior 133

A Behavior Can Be Viewed From Five Perspectives 134

Behavior and Genetics Are Interconnected 135

Behavioral Ecology Provides the Basis for Evolutionary Investigations of Behavior 136

Socioecological Pressures Affect Organisms in Five Areas 137

Success of a Behavioral Adaptation Is Measured in Terms of Energy Costs and Benefits 138

Reality Is More Complex Than Suggested by Cost-Benefit Analyses 139

General Behavior Patterns in the Living Primates	141
<i>Mother-Infant Bonds Are the Core of Primate Societies</i>	141
<i>There Are a Few Primary Grouping Patterns in Primates</i>	142
<i>Affiliation and Grooming Are Important in Primate Societies</i>	143
<i>Hierarchies and Dominance Help Structure Primate Societies</i>	144
<i>Dispersal and Life History Patterns Are Important to Social Behavior</i>	145
<i>Cooperation and Conflict Are Integral to Primate Societies</i>	145
Social Organization in Two Nonhuman Primate Societies: Macaques and Chimpanzees	146
<i>Macaques: A Widespread Primate Genus</i>	146
<i>Chimpanzees: Our Closest Relatives</i>	151
Humans Are Also Primates, and Human Behavior Has an Evolutionary History	157
<i>Social Organization and Behavior in Humans</i>	157
<i>Comparisons With Macaques</i>	158
<i>Comparisons With Chimpanzees</i>	159
<i>What Is Uniquely Human?</i>	160
<i>Conserving the Nonhuman Primates Is a Critical Challenge</i>	161
Summary	162
What We Know/Questions That Remain	162
Critical Thinking	164
Resources	165
 Chapter 6 Early Primate Evolution	168
Fossils Provide Direct Evidence of an Organism's Existence	170
Humans Are Members of the Order of Mammals Called Primates	172
<i>A Very Brief History of the Mammals</i>	172
<i>Primates Are Mammals With Specific Characteristics</i>	173
The Fossil Primates	174
<i>The Earliest Possible Primates Are Found in the Paleocene</i>	174
<i>Why Did Primates Evolve Out of Early Mammalian Groups?</i>	177
<i>True Primates Appear in the Eocene</i>	178
<i>Anthropoids (Simiiformes) Radiate in the Oligocene</i>	180
<i>Hominoid Primates Radiate During the Miocene</i>	183
<i>Nonhominoid Anthropoid Primates Radiate During the Pliocene and Pleistocene</i>	188

Evolutionary Relationships Among These Fossil Primates Are a Matter of Debate 189

Summary 189

Critical Thinking 191

What We Know/Questions That Remain 192

Resources 192

Chapter 7 Early Hominin Evolution 194

Classification of Hominids/Hominins Is a Subject of Debate 197

Early Hominins Evolved Primarily in East Africa 200

Early Possible Hominins Are Found in Kenya 201

Hominins of the Middle and Late Pliocene Were Bipedal and Sexually Dimorphic 207

Were There Early Hominins in Southern Africa? 212

Evolutionary Relationships Are Unclear 212

Fossils Give Us Clues About Early Hominin Behavior 213

Habitat: Where They Lived 214

Diet: What Did They Eat, and How Did They Get It? 214

Tools: Did They Use Bone, Wood, or Stone Tools? 215

Social Life: How Did They Live Together? 215

The Evolution of Bipedality Has Several Possible Explanations 216

Summary 218

What We Know/Questions That Remain 218

Critical Thinking 220

Resources 221

Chapter 8 Plio-Pleistocene Hominins and the Genus Homo 224

Changes at the Late Pliocene-Pleistocene Boundary 227

The Robust Hominins Had Unique Cranial and Dental Anatomy 228

The Genus Paranthropus: Hominins With Massive Chewing Adaptations 229

Robust Hominin Behavior 233

The Gracile Hominins Shared Characteristics With Both Earlier and Later Groups 235

Genus Australopithecus: Two Plio-Pleistocene Forms 235

Are These Australopithecines Ancestral to Humans? 238

Early Homo: A New Genus Emerges 240

Gracile Hominin Behavior and the Advent of Biocultural Evolution 243

Genus <i>Homo</i> Diversifies: The First Humans	246
A Classification Debate: One Genus but How Many Species?	247
Physical Characteristics of <i>H. erectus</i>	249
Geographic Distribution of <i>H. erectus</i>	250
When Did Hominins Expand Beyond Africa?	254
Why Did Hominins Expand Beyond Africa?	255
<i>H. erectus</i> Material Culture and the Expansion of the Biocultural Evolution	256
Summary	260
Critical Thinking	261
What We Know/Questions That Remain	262
Resources	262

Chapter 9 The Rise of Modern Humans 266

Archaic <i>Homo sapiens</i> and the Changing Speed of Innovation	269
The Oldest Archaic Human Fossils Are Found in Africa	270
Archaic Human Fossils Are Found Across Eurasia	271
Archaic Humans Are Found in China but Not in Southeast Asia	272
Is <i>Homo heidelbergensis</i> a True Species?	274
The Neanderthals Were Not as Different as First Thought, but They Were Different	275
Material Culture of the Archaic Humans	277
Increased Complexity in Tool Use and Hunting	277
Dietary and Behavior Changes Associated With New Tool Kits	278
Social Patterns: High Levels of Communal Cooperation	280
Postmortem Modification of Bodies	281
The Appearance of "Anatomically Modern" <i>Homo sapiens</i>	282
Anatomically Modern Humans Are Defined Morphologically, Not Behaviorally	282
The Earliest Anatomically Modern Fossils Are Found in Africa	283
The Eurasian Record Demonstrates the Spread of Modern Humans	284
Material Culture Becomes Very Complex With the Appearance of Modern Humans	286
Blades and Associated Industries Revolutionized the Human Tool Kit	287
Changing Technologies and Behavioral Patterns Affected Diet	289
Modern Humans Used Art and Symbols	289

Burial of the Dead Was Ubiquitous and Postmortem Modification Common	290
Current Human Patterns Began to Emerge 20,000 Years Ago	292
The Origin of Modern Humans Is a Matter of Debate	292
The Case for a Recent African Origin	293
The Case for Multiregional Evolution	296
The Case for Multiple Dispersals	298
As Usual, Reality Is Not This Clear	299
These Models Influence the Way We Think About Human Differences	300
Summary	300
What We Know/Questions That Remain	302
Critical Thinking	302
Resources	303

Chapter 10 Human Biological Diversity in Context 306

Humans Have Long Exhibited Biological Diversity	309
A Visible but Misunderstood Variation: Skin "Color"	309
Another Visible Difference: Body Shape and Size	313
A Cornerstone of Variation Research: Skull Morphology	315
Sex Differences Are Seen in the Skeletal and Soft Tissue of Humans	316
The Impact of Disease Environments: Variation in the Human Immune System	319
Blood Groups Vary Within and Across Populations	320
Most Genetic Variation Is Found Within Populations	322
Human Biological Diversity Is Best Explained Using a Biocultural Approach	323
Natural Selection and Human Cultural Behavior	323
Examples of Selection and Adaptation in Human Variation	325
There Are No Races in <i>Homo sapiens sapiens</i>	329
What Is the Evidence Regarding Biological Races in Humans?	330
There Is a Scientific Study of Human Biological Variation	333
Why Does the Notion of Biological Race Persist?	333
A Very Brief History of Racism	334
Modern Notions Are Also Due to a Lack of Context	336
Summary	337
What We Know/Questions That Remain	340
Critical Thinking	341
Resources	341

Chapter 11 Modernity and Human Biology 344

Humans Are Still Evolving 346

*Diseases and Modern Humans 347**Cultural Patterns Influence Morphology 351*

Culture, Evolution, and the Future: Where Are We Headed? 356

*Human Densities and Global Population Are Dramatically Different Today 356**Genetic Manipulation Can Influence Our Evolution 360**Some of Our Behavior Reflects Adaptations 360*

Understanding Biological Anthropology and Understanding Ourselves 362

Summary 363

What We Know/Questions That Remain 364

Critical Thinking 364
