<i>About the author</i>	vi
<i>Foreword</i>	vii
<i>Preface</i>	ix
1 Introduction	1
Introduction	1
Neuroethology: the synthesis of neurobiology and ethology	2
Choosing the right level of simplicity	3
Quantifying behavior: a prerequisite for neuroethological research	5
Finding the right model system	6
Summary	8
Recommended reading	9
Questions	9
Advanced topic	9
2 Fundamentals of neurobiology	11
Introduction	11
Cellular and subcellular composition of nervous systems	11
Cell theory versus reticular theory	11
Neurons and nervous systems	14
Axon ensheathment by myelin	15
Physiology and ionic basis of the electrical properties of neurons	17
Recording techniques	17
Resting potential	19
Generation of action potentials	21
Recording of propagating action potentials	22
Propagation of action potentials: myelinated versus unmyelinated axons	24
Voltage-gated sodium channels	27
Synapses	29
Chemical synapse: structure and function	29
Neurotransmitters	32

	Ionotropic versus metabotropic receptors	33
	Nicotinic acetylcholine receptor: molecular structure and function	35
	Synaptic potentials	37
	Electrical synapse	39
	Sensory systems	41
	Function of sensory organs	41
	Receptor potentials and frequency coding	42
	Neurobiological approaches in neuroethology	42
	Elucidation of neuronal connections	43
	Localization of tissue constituents	45
	Immunohistochemistry	46
	<i>In situ</i> hybridization	48
	Selective elimination of cells	50
	Summary	51
	Recommended reading	53
	Questions	53
	Advanced topic	54
3	Fundamentals of ethology	55
	Introduction	55
	Sign stimuli and releasing mechanisms	55
	Supernormal stimuli	57
	Law of heterogeneous summation	59
	Gestalt principle	60
	Importance of condition of recipient	62
	Motivational effect of releaser	63
	Communication	64
	Summary	71
	Recommended reading	72
	Questions	72
	Advanced topic	73
4	The study of animal behavior: a brief history	75
	Introduction	75
	The roots of the study of animal behavior	76
	Aristotle and the Middle Ages	76
	Mind-body dualism	77
	The new era in the study of animal behavior	78
	Evolutionary theory and comparative approaches	78
	Experimental and objective approaches	78

	The rise of ethology	79
	Mechanistic schools	83
	Relating neuronal activity to behavior: the establishment of neuroethology	87
	The beginnings	87
	The breakthroughs	92
	The future	93
	Summary	94
	Recommended reading	95
	Questions	95
	Advanced topic	96
5	Spatial orientation and sensory guidance	97
	Introduction	97
	Classification of orienting movements	98
	Orienting behavior without a nervous system	99
	Cellular mechanisms of taxis behavior in paramecia	101
	Phototaxis	101
	Galvanotaxis	103
	Geotaxis in vertebrates	106
	Effective physiological stimulus	107
	Physiological properties of hair cells	109
	Transduction mechanism	110
	Echolocation in bats	111
	The beginnings of echolocation research	112
	Classification of bat ultrasound	114
	FM signals: distance estimation	115
	CF signals: Doppler shift analysis	118
	Adaptations of the auditory system	120
	Counter-sonics: the prey's adaptations	122
	Summary	124
	Recommended reading	126
	Questions	126
	Advanced topic	127
6	Neuronal control of motor output	128
	Introduction	128
	Escape swimming in toad tadpoles	129
	The behavior	129
	A physiological approach to the study of swimming behavior	130
	The spinal circuitry controlling swimming	132
	Operation of the swimming circuitry	134
	Coordination of oscillator activity along the spinal cord	135

Decision-making	136
Reflexive decision-making versus dynamic decision-making	136
The neuronal decision-making circuit in the leech	138
Summary	140
Recommended reading	142
Questions	142
Advanced topic	142
7 Neuronal processing of sensory information	144
Introduction	144
Recognition of prey and predators in the toad	145
The model system	145
The natural behavior	146
Dummy experiments	146
In search of feature detectors	150
The visual system	151
Recording experiments	152
Stimulation experiments	153
Connections with other brain regions	154
Directional localization of sound in the barn owl	155
The behavior	155
Experimental approach	157
Accuracy of orientation response	159
Physical parameters of sound involved in head orientation	160
The cochlear nucleus: parallel processing of time and intensity information	163
The laminar nucleus: computation of interaural time differences	167
The posterior lateral nucleus: computation of interaural intensity differences	169
The lateral shell: convergence of timing and intensity information	171
External nucleus: formation of a map of auditory space	171
The final step in sensory processing: formation of an auditory-visual map	172
Summary	173
Recommended reading	175
Questions	176
Advanced topic	176
8 Sensorimotor integration: the jamming avoidance response of the weakly electric fish <i>Eigenmannia</i>	177
Introduction	177
The system and its components	179
Electric organs and electroreceptors	179
Electrolocation	181
The jamming avoidance response	182

Behavioral experiments	183
Determination of the sign of the frequency difference without internal reference	183
Behavioral rules governing the jamming avoidance response	185
Neuronal implementation	191
Electrosensory processing I: electroreceptors	191
Electrosensory processing II: electrosensory lateral line lobe	192
Electrosensory processing III: torus semicircularis	194
Electrosensory processing IV: nucleus electrosensorius	195
Motor control	196
Reflections on the evolution of the jamming avoidance response	198
Summary	199
Recommended reading	200
Questions	201
Advanced topic	201
9 Neuromodulation: the accommodation of motivational changes in behavior	203
Introduction	203
Neural plasticity as the basis of motivational changes in behavior	205
Structural reorganization	205
Dendritic plasticity: seasonal changes in chirping behavior of weakly electric knifefish	206
Seasonal variation in dendritic morphology of motoneurons in white-footed mice	211
Structural reorganization mediated by glial cells	213
When to use 'structural reorganization'?	215
Biochemical switching	215
Modulation of the stomatogastric ganglion	215
Modulation of crayfish aggressive behavior	217
Modulation of the modulators	217
What makes modulators suitable for neuromodulation?	218
When to use 'biochemical switching'?	219
Summary	219
Recommended reading	220
Questions	220
Advanced topic	221
10 Circadian rhythms and biological clocks	222
Introduction	222
Demonstration of circadian rhythms	223
Temperature compensation of free-running periods	225
Entrainment of biological clocks by environmental cues	225
Molecular nature of the clock	229
Anatomical localization of biological clocks	234

Summary	238
Recommended reading	239
Questions	239
Advanced topic	240
11 Large-scale navigation: migration and homing	241
Introduction	241
Modes of migration	242
Genetic control of migratory behavior	246
Homing	248
Approaches used to study animal migration and homing	249
Mechanisms of long-distance orientation in birds	250
Sun compass	250
Star compass	254
Magnetic compasses and maps	256
Olfactory navigation in homing pigeons	263
Homing in salmon	264
Life cycle of salmon	265
Precision of homing	267
Transplantation experiments	267
The olfactory imprinting hypothesis	268
Laboratory experiments	270
Imprinting to artificial substances	271
Ultrasonic tracking	272
Hormonal regulation of olfactory imprints	273
The model	275
Possible neuronal mechanism of olfactory imprinting	276
Open-sea navigation: sun-compass orientation	276
Open-sea navigation: magnetoreception	276
Orientation in sea turtles	278
Life cycle of sea turtles	278
Orientation on the beach	280
Magnetic orientation	280
Orientation on land	280
Waves as an orientation cue	281
Summary	283
Recommended reading	285
Questions	286
Advanced topic	287
12 Communication: the neuroethology of cricket song	289
Introduction	289
Biophysics of cricket songs	291

Mechanism of sound production	292
Neural control of sound production	293
Behavioral analysis of auditory communication	294
Perception of auditory signals	297
Song recognition by auditory interneurons	299
Temperature coupling	302
The problem	302
The songs	303
Effect of temperature on calling song	304
Effect of temperature on calling song recognition	305
Summary	307
Recommended reading	308
Questions	309
Advanced topic	309
13 Cellular mechanisms of learning and memory	311
Introduction	311
Explicit and implicit memory systems	312
The cell biology of an implicit memory system: sensitization in <i>Aplysia</i>	314
Why <i>Aplysia</i> ?	315
The gill-withdrawal reflex	316
Neural circuit of the gill-withdrawal reflex	318
Molecular biology of short-term sensitization	318
Molecular biology of long-term sensitization	321
The cell biology of an explicit memory system: the hippocampus of mammals	323
Non-human models to study explicit memory	323
The structure of the hippocampus	324
Place cells in the hippocampus	325
Long-term potentiation	327
Molecular biology of long-term potentiation in the mammalian hippocampus	328
New neurons for new memories	330
Adult neurogenesis and memory formation in the hippocampus of rodents	330
Adult neurogenesis and spatial learning in the avian hippocampus	333
Summary	335
Recommended reading	336
Questions	337
Advanced topic	337
