|-----------------|----------------------------------------------------------------------------------|-------------|
| <b>PART I</b>   | <b>INTRODUCTION TO THE CELL</b>                                                  | <b>1</b>    |
| Chapter 1       | Cells and Genomes                                                                | 1           |
| Chapter 2       | Cell Chemistry and Bioenergetics                                                 | 43          |
| Chapter 3       | Proteins                                                                         | 109         |
| <b>PART II</b>  | <b>BASIC GENETIC MECHANISMS</b>                                                  | <b>175</b>  |
| Chapter 4       | DNA, Chromosomes, and Genomes                                                    | 175         |
| Chapter 5       | DNA Replication, Repair, and Recombination                                       | 237         |
| Chapter 6       | How Cells Read the Genome: From DNA to Protein                                   | 299         |
| Chapter 7       | Control of Gene Expression                                                       | 369         |
| <b>PART III</b> | <b>WAYS OF WORKING WITH CELLS</b>                                                | <b>439</b>  |
| Chapter 8       | Analyzing Cells, Molecules, and Systems                                          | 439         |
| Chapter 9       | Visualizing Cells                                                                | 529         |
| <b>PART IV</b>  | <b>INTERNAL ORGANIZATION OF THE CELL</b>                                         | <b>565</b>  |
| Chapter 10      | Membrane Structure                                                               | 565         |
| Chapter 11      | Membrane Transport of Small Molecules and the Electrical Properties of Membranes | 597         |
| Chapter 12      | Intracellular Compartments and Protein Sorting                                   | 641         |
| Chapter 13      | Intracellular Membrane Traffic                                                   | 695         |
| Chapter 14      | Energy Conversion: Mitochondria and Chloroplasts                                 | 753         |
| Chapter 15      | Cell Signaling                                                                   | 813         |
| Chapter 16      | The Cytoskeleton                                                                 | 889         |
| Chapter 17      | The Cell Cycle                                                                   | 963         |
| Chapter 18      | Cell Death                                                                       | 1021        |
| Chapter 19      | Cell Junctions and the Extracellular Matrix                                      | 1035        |
| <b>PART V</b>   | <b>CELLS IN THEIR SOCIAL CONTEXT</b>                                             | <b>1035</b> |
| Chapter 20      | Cancer                                                                           | 1091        |
| Chapter 21      | Development of Multicellular Organisms                                           | 1145        |
| Chapter 22      | Stem Cells and Tissue Renewal                                                    | 1217        |
| Chapter 23      | Pathogens and Infection                                                          | 1263        |
| Chapter 24      | The Innate and Adaptive Immune Systems                                           | 1297        |
| Glossary        |                                                                                  | G: 1        |
| Index           |                                                                                  | I: 1        |
| Tables          | The Genetic Code, Amino Acids                                                    | T: 1        |
