Preface	v	3.8 Are lethal alleles recessive or dominant?	32
Chapter 1		3.9 Human pedigrees	33
Introduction	1	3.10 The multiplication rule	36
1.1 Key concepts in genetics	3	Summary	37
		Problems	38
Chapter 2		Chapter 4	
Monohybrid Inheritance	7	Dihybrid Inheritance	41
2.1 Key principles of genetic inheritance	8	4.1 Two genes – two characters	42
2.2 A genetic explanation of the monohybrid cross	10	4.2 Test cross	45
2.3 Representing genetic crosses	12	4.3 Two genes – one trait	46
2.4 A Punnett square	13	4.4 Complementary genes	48
2.5 Mendel's First Law of Segregation	13	4.5 Epistasis	51
2.6 Predicting the outcome of crosses	15	4.6 The chi-squared (χ^2) test	54
2.7 Chance and probability in genetics	15	Summary	56
2.8 The importance of large numbers	16	Problems	57
2.9 The test cross	17	Chapter 5	
Summary	18	The Chromosomal Basis of Inheritance	60
Problems	19	5.1 The structure of chromosomes	61
Chapter 3		5.2 The number of chromosomes	62
Extensions to Monohybrid Inheritance	21	5.3 Homologous pairs of chromosomes	63
3.1 Multiple allelism	21	5.4 Diploid and haploid cells	64
3.2 Incomplete dominance	25	5.5 Two types of nuclear division	65
3.3 Representing crosses involving incomplete dominance	26	5.6 Mitosis	66
3.4 Explaining incomplete dominance	27	5.7 The biological significance of mitosis	68
3.5 Redefining dominance relationships	28	5.8 Meiosis	70
3.6 Co-dominance	29	5.9 The biological significance of meiosis	71
3.7 Lethal alleles	31	5.10 Revisiting Mendel's laws	73
		Summary	75
		Problems	76

Chapter 6**Sex Determination and Sex Linkage** 78

6.1 Sex-determining chromosomes	78
6.2 Other sex-determining mechanisms	80
6.3 The Y chromosome and sex determination in humans	82
6.4 The expression of X-linked genes	83
6.5 Representing crosses involving X-linked genes	84
6.6 Sex-linked inheritance patterns	84
6.7 Pedigree analysis of human X-linked recessive inheritance	86
6.8 Human X-linked dominant inheritance	88
6.9 Inactivation of the X chromosome	88
6.10 Y-linked inheritance	90
Summary	90
Problems	91

Chapter 7**Linkage and Chromosome Mapping** 93

7.1 Linkage and recombination	94
7.2 Representing dihybrid crosses involving linked genes	95
7.3 Explaining Morgan's results	97
7.4 The use of the test cross in linkage studies	98
7.5 Producing chromosomal maps	100
7.6 Using a trihybrid test cross to map genes	103
7.7 Interference and coefficient of coincidence	104
7.8 A few comments on physical mapping	105
7.9 Mapping human genes	106
Summary	109
Problems	109

Chapter 8**Variation in Chromosomal Number and Structure** 112

8.1 Changes in chromosome number: terminology	113
8.2 Aneuploidy	113
8.3 Monosomy	114
8.4 Trisomy	115
8.5 Polyploidy	118
8.6 Origins of polyploidy	120
8.7 Producing an autopolyploid	120
8.8 Producing an allopolyploid	121
8.9 Changes in chromosome structure	122
8.10 Changes in the arrangement of genes	123
8.11 Changes in the number of genes on a chromosome	126
8.12 Fluorescent <i>in situ</i> hybridization	128
Summary	130
Problems	130

Chapter 9**The Principles of Quantitative Genetics** 133

9.1 Multifactorial traits: some definitions	134
9.2 Representing multifactorial traits	135
9.3 Calculating the mean	136
9.4 Calculating the variance	137
9.5 Calculating the standard deviation	138
9.6 Genes or environment	140
9.7 Partitioning phenotypic variance	141
9.8 Heritability index	143
9.9 Partitioning genetic variance $V_p = V_g + V_e$	144
9.10 Narrow-sense heritability	146
9.11 Investigating multifactorial traits in humans	147
Summary	151
Problems	152

Chapter 10

An Introduction to Population Genetics 155

10.1 Population genetics: some definitions	156
10.2 Calculating allele frequencies	157
10.3 The Hardy-Weinberg law	157
10.4 Calculating genotype frequencies	160
10.5 Testing for equilibrium	162
10.6 Disturbances of the Hardy-Weinberg equilibrium	163
10.7 Mutation	163
10.8 Migration	165
10.9 Genetic drift: random changes in small populations	166
10.10 Selection	168
Summary	170
Problems	171

Chapter 11

Heredity at the Molecular Level 174

11.1 The structure of DNA – a summary	175
11.2 The biochemical nature of nucleotides	175
11.3 The double helix	176
11.4 DNA packaging	178
11.5 Replicating DNA	180
11.6 Details of DNA replication	182
Summary	184
Problems	185

Chapter 12

From Genes to Proteins 187

12.1 Information flow from gene to protein – a summary	189
--	-----

12.2 The biochemical nature of RNA	190
12.3 Producing RNA: transcription	191
12.4 The different forms of RNA	192
12.5 Exons and introns	193
12.6 The genetic code	194
12.7 Producing the protein: translation	197
12.8 The causes and consequences of mutation	200
Summary	205
Problems	206

Chapter 13

Manipulating DNA 208

13.1 An overview of recombinant DNA technology	209
13.2 Restriction enzymes	209
13.3 Vectors	211
13.4 Creating a recombinant DNA molecule	213
13.5 Introducing the recombinant DNA molecule into a host cell	213
13.6 The production of human recombinant proteins	216
13.7 The production of transgenic crops	219
13.8 The polymerase chain reaction	222
13.9 DNA sequencing	226
Summary	228
Problems	228

Solutions to Problems 230

Appendix 249

Glossary 250
