

Contents

Preface		vii
Acknowledgments		ix
Section 1	An Introduction to Evolution	1
Chapter 1	Approaching Evolution	3
	A systems biology perspective	4
	Further reading	6
Chapter 2	A Potted History of Evolutionary Science	7
	The pre-Darwinian era	7
	The Darwinian era	8
	The era of evolutionary genetics	9
	The molecular era	10
Chapter 3	Life Today: Species, Diversity, and Classification	13
	The numbers of species today	14
	Scale: from microns to meters	15
	Variation within a species	16
	The anatomical differences between species	16
	Taxonomy and the grouping of species	18
	Classifying life today	20
	The mechanisms of speciation – a summary	23
	Key points	25
	Further reading	25
Section 2	The Evidence for Evolution and the History of Life	27
Chapter 4	The Fossil Record	29
	The beginnings	30
	The Cambrian explosion	32
	Extinctions	34
	Invertebrate evolution	34
	Chordate and vertebrate evolution	37
	Plant evolution	43
	Key points	45
	Further reading	45
Chapter 5	Darwinian Descent with Modifications: Evolutionary Taxonomy and Cladistics	47
	Cladistics	50
	Convergent evolution and homoplasies	53
	Plant cladistics	54
	An example of a hidden plesiomorphy	57
	Key points	58
	Further reading	59
Chapter 6	The Anatomical Evidence for Vertebrate Evolution: from Fish to Birds	61
	Fish	62
	From sea to land	66

	Amphibians	71
	The transition to reptiles and the evolution of the amniote egg	72
	Reptiles	74
	The origin of birds	81
	Key points	82
	Further reading	82
Chapter 7	The Anatomical Evidence for Vertebrate Evolution: Mammals	83
	Prototheria (monotremes)	83
	Metatheria (marsupials)	85
	Eutheria (placental mammals)	85
	The transition from synapsid reptile to early mammal	86
	The early evolution of mammals	87
	The evolution of some key mammalian features	91
	Back to the sea and the evolution of whales	99
	Key points	101
	Further reading	102
Chapter 8	The Genomic Evidence for Evolution	103
	Phylograms and cladograms are subtly different	104
	Choosing sequences for phylogenetic analysis	106
	Constructing sequence-based phylogenetic trees	108
	How accurate are phylogenies?	113
	Gene trees and species trees	115
	Adding timings – the ticking of the molecular clock	116
	Historical population analysis using coalescent theory	117
	Key points	119
	Further reading	120
Chapter 9	The First Three Billion Years of Life: from the First Universal Common Ancestor to the Last Eukaryote Common Ancestor and Beyond	121
	Prokaryotes	123
	The origin of life	124
	FUCA, the first universal common ancestor	125
	LUCA, the last universal common ancestor	127
	FECA, the first eukaryote common ancestor	128
	LECA, the last eukaryote common ancestor	130
	Early eukaryote evolution and the roots of the major groups	134
	The acquisition of multicellularity from the social behavior of eukaryote protists	136
	The origins of multicellularity	137
	Key points	138
	Further reading	139
Chapter 10	Evo-devo 1: Embryos	141
	Diploblast and triploblast embryos	142
	Early development and the protostome/deuterostome divide	143
	Model systems	145
	The processes that drive development	151
	How tissues form	154
	Tissue modules	158
	The origins of anatomical differences	159

	The genome	160
	Key points	161
	Further reading	162
Chapter 11	Evo-devo 2: The Evidence from Functional Homologies	163
	Functional homologies	165
	Urbilateria	176
	Key points	179
	Further reading	179
Section 3	The Mechanisms of Evolution	181
Chapter 12	Variation 1: Populations and Genes	183
	Phenotypic variation	185
	Genotype variation	189
	The role of the environment in generating variation-epigenetic inheritance	193
	The dynamics of variation across a population: the broader view	194
	Key points	196
	Further reading	196
Chapter 13	Variation 2: Clades and Networks	197
	The effect of mutation on protein systems and networks	198
	Examples of anatomical change due to variation in network outputs	201
	Developmental constraints on variation	209
	The mutational basis of trait change – the broader view	211
	Key points	212
	Further reading	212
Chapter 14	Adaptation, Fitness, and Selection	213
	Adaptation	214
	Increasing fitness	215
	Selection	217
	The speed of change under natural selection	225
	The modern evolutionary synthesis	228
	Population genetics	229
	The strengths of the modern evolutionary synthesis	231
	The limitations of the modern evolutionary synthesis	232
	The multilevel view of how phenotypic change happens	234
	Key points	235
	Further reading	235
Chapter 15	Speciation	237
	Defining a species	238
	The population genetics of small groups	240
	Speciation is due to the accumulation of small genetic differences	241
	Process of speciation	243
	Species flocks	245
	Artificial speciation	246
	The genetics of speciation	247
	The rate of speciation	248
	The broader perspective	250
	Key points	250
	Further reading	251

Chapter 16	Human Evolution	253
	The context of human evolution	254
	The fossil evidence	255
	The genetic evidence	261
	<i>Homo</i> migrations out of Africa	263
	Genetic origin of the various human groups and their differences	265
	Artefacts, art, and behavior	267
	Selection and speciation	271
	Key points	273
	Further reading	274
Chapter 17	Conclusions	275
	Contemporary challenges	277
	Is anything missing?	279
Appendix 1	Systems Biology	283
	The narrow view	284
	The broader view	284
	A note on systems terminology	287
	Further reading	289
Appendix 2	A History of Evolutionary Thought	291
	The early days	292
	The move to evolutionary thinking	294
	The early nineteenth century	295
	The era of Darwin	298
	The nineteenth century after Darwin	301
	The early twentieth century	302
	The molecular era	306
	Further reading	307
Appendix 3	Rocks, Dates, and Fossils	309
	Rock types	309
	Aging rocks (geochronology)	310
	How fossils form	313
	Further reading	316
Appendix 4	Evolution Versus Creationism	317
	Evolution	318
	Creationism	324
	Conclusions	327
	Glossary	329
	References	337
	Figure Acknowledgments	361
	Index	365
