<i>Preface</i>	<i>xxi</i>
Part I Technology for DNA and RNA analysis of pathogens	1
1 Nucleic acid sequencing for characterizing infectious and/or novel agents in complex samples	3
J. C. DETTER and S. L. JOHNSON, Los Alamos National Laboratory, USA, K. A. BISHOP-LILLY, Navy Medical Research Center-Frederick, USA, P. S. CHAIN, Los Alamos National Laboratory, USA, H. S. GIBBONS, US Army Edgewood Chemical Biological Center, USA, T. D. MINOGUE, US Army Medical Research of Infectious Disease, USA, S. SOZHAMANNAN, Critical Reagents Program, USA, E. J. VAN GIESON, Defense Threat Reduction Agency, USA and I. G. RESNICK, IGR Consulting, USA	
1.1 Pathogen sequencing and applications in public health and biosecurity	3
1.2 Next-generation sequencing (NGS) technologies and the sequencing landscape	15
1.3 Characterization of known pathogens	24
1.4 Discovery of novel agents	30
1.5 Future trends	38
1.6 Acknowledgments	43
1.7 References	43
2 Multiplexed, lateral flow, polymerase chain reaction (PCR) techniques for biological identification	54
W. M. NELSON, G. W. LONG and L. M. COCKRELL, Tetracore, Inc., USA	
2.1 Introduction	54

vi Contents

2.2	Real-time PCR: development and description	57
2.3	Considerations when developing a real-time PCR assay	63
2.4	Real-time PCR instrument platforms	64
2.5	References	67
3	Isothermal amplification of specific sequences Y. TONG, New England Biolabs, USA	69
3.1	Introduction	69
3.2	Melting temperature (T_m) estimation and categories of isothermal amplification technologies	70
3.3	Isothermal amplification based on DNA polymerases	74
3.4	Isothermal amplification based on RNA polymerases	84
3.5	Future prospects	85
3.6	References	87
4	Bead array technologies for genetic disease screening and microbial detection S. A. DUNBAR and S. V. ANGELONI, Luminex Corporation, USA	93
4.1	Introduction	93
4.2	Luminex® xMAP® Technology	94
4.3	Illumina VeraCode	108
4.4	NanoString nCounter	111
4.5	Applications	115
4.6	Conclusion	121
4.7	References	122
Part II	Lab-on-chip and portable systems for biodetection and analysis	129
5	Electrochemical detection for biological identification P. SKLÁDAL, Masaryk University, Czech Republic	131
5.1	Introduction	131
5.2	Electrochemical techniques for bioanalysis	132
5.3	Electrochemical biosensors for pathogens	141
5.4	Conclusions	146
5.5	References	147
6	Conductometric biosensors S. DZYADEVYCH, National Academy of Sciences of Ukraine, Ukraine and N. JAFFREZIC-RENAULT, University of Lyon, France	153
6.1	Introduction	153
6.2	Conductometry in enzyme catalysis	154
6.3	Conductometric enzyme biosensors based on direct analysis – I: Biosensors for biomedical applications	155

6.4	Conductometric enzyme biosensors based on direct analysis – II: Biosensors for environmental applications	163
6.5	Conductometric enzyme biosensors based on direct analysis – III: Biosensors for agribusiness applications	171
6.6	Conductometric enzyme biosensors based on inhibition analysis	176
6.7	Whole cell conductometric biosensors	183
6.8	DNA-based conductometric biosensors	186
6.9	Conductometric biosensors for detection of microorganisms	187
6.10	Conclusions	188
6.11	References	188
7	Bio-chem-FETs: field effect transistors for biological sensing N. CHANIOTAKIS and M. FOUSKAKI, University of Crete, Greece	194
7.1	Introduction	194
7.2	The field effect transistor (FET)	198
7.3	Chemical compounds and biological units as sensing elements in Bio-chem-FETs	205
7.4	Nanomaterials and nanoengineering in the design of Bio-chem-FETs	212
7.5	Future trends	215
7.6	References	215
8	Microfluidic devices for rapid identification and characterization of pathogens H. BECKER, T. HANSEN-HAGGE and C. GÄRTNER, microfluidic ChipShop GmbH, Germany	220
8.1	Introduction	220
8.2	Challenges and technical as well as commercial solutions	221
8.3	Pathogens and analytes	224
8.4	Chip-based analysis of protein-based analytes in microfluidic devices	226
8.5	Chip-based analysis of nucleic acid-based analytes in microfluidic devices	235
8.6	Future trends	240
8.7	Acknowledgements	245
8.8	References	245
	Part III Optical systems for biological identification	251
9	Optical biodetection using receptors and enzymes (porphyrin-incorporated) H. J. HARMON and A. OLIVER, Oklahoma State University, USA	253
9.1	Introduction	253

9.2	Prior research/literature	257
9.3	Binding of cells	259
9.4	Binding of a receptor to a simulated 'toxin'	261
9.5	Binding of the simulated 'toxin' to the receptor	262
9.6	Binding of a specific antigen diagnostic of cancer to a receptor	263
9.7	Binding of cholera toxin	264
9.8	Binding of influenza	266
9.9	Conclusion	274
9.10	References	275
10	Overview of terahertz spectral characterization for biological identification T. GLOBUS, B. GELMONT and I. SIZOV, University of Virginia, USA	281
10.1	Introduction	281
10.2	Fundamentals of terahertz vibrational spectroscopy for biological identification of large biological molecules and species	282
10.3	Overview	284
10.4	Recent and future trends	286
10.5	Approach for computational modeling of vibrational frequencies and absorption spectra of biomolecules	287
10.6	The problem with a poor convergence of simulation	289
10.7	Other problems: dissipation time scales	291
10.8	Statistical model for <i>Escherichia coli</i> DNA sequence	293
10.9	Component-based model for <i>Escherichia coli</i> cells	294
10.10	Experimental sub-terahertz spectroscopy of biological molecules and species	295
10.11	Conclusions and future trends	306
10.12	Acknowledgments	307
10.13	References	307
11	Raman spectroscopy for biological identification T. J. RONNINGEN, J. M. SCHUETTER, J. L. WIGHTMAN, A. MURDOCK and A. P. BARTKO, Battelle Memorial Institute, USA	313
11.1	Introduction	313
11.2	Experimental methods used to capture intensive variability	315
11.3	Multivariate spectral analysis methods	317
11.4	Species-level biological identification results	324
11.5	Conclusions	331
11.6	Acknowledgments	332
11.7	References	332

12	Lidar (Light Detection And Ranging) for biodetection H. S. LEE, C. R. PRASAD and R. M. SERINO, Science & Engineering Services, Inc. (SESI), USA	334
12.1	Introduction	334
12.2	The value of early warning	335
12.3	The essentials of Bio-Lidar	336
12.4	How Bio-Lidar is used	338
12.5	Bio-Lidar value-added	341
12.6	Areas for improvement	342
12.7	The value of integration	349
12.8	Conclusions and future trends	350
12.9	References	350
Part IV	Sample preparation and mass spectrometry-based biological analysis	353
13	Electrophoretic approaches to sample collection and preparation for nucleic acids analysis C. BRADBURN, Johns Hopkins University, USA	355
13.1	Introduction	355
13.2	Separation parameters for nucleic acids for use in sample preparation	356
13.3	Electrophoresis using uniform electric fields for sample preparation and analysis	357
13.4	Electrophoresis using non-uniform electric field gradients for sample preparation and analysis	360
13.5	Comparison of electrophoretic techniques for sample preparation and contaminant rejection	364
13.6	Future trends	366
13.7	Sources of further information and advice	367
13.8	Acknowledgments	368
13.9	References	369
14	Mass spectrometry-based proteomics techniques for biological identification R. E. JABBOUR and A. P. SNYDER, US Army Edgewood Chemical Biological Center, USA	370
14.1	Introduction	370
14.2	Bacterial proteome handling, processing and separation methods	372
14.3	Sample ionization and introduction for mass spectrometry (MS) analysis	377
14.4	Mass spectral proteomic methods	386
14.5	Computational and bioinformatics approaches for data mining and discrimination of microbes	389
