

Contents

Preface	v
Contributors	xi
1 Extraction of Total RNA from Tissues and Cultured Cells Sandeep Raha, Mingfu Ling, and Frank Merante	1
2 Isolation of Total Cellular DNA from Tissues and Cultured Cells Frank Merante, Sandeep Raha, and Mingfu Ling	9
3 Gel Electrophoresis of DNA Duncan R. Smith	17
4 S1 Nuclease Analysis of RNA Louis Lefebvre and Stéphane Viville	35
5 Detecting mRNA by Use of the Ribonuclease Protection Assay (RPA) Ralf Einspanier and Annette Plath	51
6 Gene Probes Marilena Aquino de Muro	59
7 Nonradioactive Labeling of DNA Thomas P. McCreery and Terrence R. Barrette	73
8 Southern Blot Analysis Paolo A. Sabelli	77
9 Northern Blot Analysis Paolo A. Sabelli	89
10 DNA Sequencing Chris Spencer	95
11 Autoradiography and Fluorography Bronwen Harvey	109
12 Mobility Shift Assays Nigel J. Savery and Stephen J. W. Busby	121
13 cDNA Libraries Ian G. Cowell	131
14 Genomic DNA Libraries Bimal D. M. Theophilus	145
15 λ as a Cloning Vector Rupert Mutzel	153
16 Plasmid-Derived Cloning Vectors Craig Winstanley and Ralph Rapley	165
17 M13 and Phagemid-Based Cloning Vectors Ralph Rapley	181

18	Retroviral Vectors: <i>From Laboratory Tools to Molecular Medicines</i> Richard G. Vile, Anna Tuszyński, and Simon Castleden	193
19	Baculovirus Vectors Azeem Ansari and Vincent C. Emery	219
20	Gene Transfer and Expression in Tissue Culture Cells of Higher Eukaryotes M. Alexandra Aitken, Selina Raguz, and Michael Antoniou	235
21	Plant Transformation Andy Prescott, Rob Briddon, and Wendy Harwood	251
22	Restriction Fragment-Length Polymorphisms Elaine K. Green	271
23	Genome Mapping Jacqueline Boulton	281
24	Yeast Artificial Chromosomes Angela Flannery and Rakesh Anand	287
25	Polymerase Chain Reaction Ralph Rapley	305
26	In Vitro Transcription Martin J. Tymms	327
27	In Vitro Translation Martin J. Tymms	335
28	Site-Directed Mutagenesis John R. Adair and T. Paul Wallace	347
29	Transgenic Techniques Roberta M. James and Paul Dickinson	361
30	DNA Profiling: <i>Theory and Practice</i> Karen M. Sullivan	383
31	Radiolabeling of Peptides and Proteins Arvind C. Patel and Stewart R. Matthewson	401
32	Protein Electrophoresis Paul Richards	413
33	Free Zone Capillary Electrophoresis David J. Begley	425
34	Protein Blotting: <i>Principles and Applications</i> Peter R. Shewry and Roger J. Fido	435
35	Ion-Exchange Chromatography David Sheehan and Richard Fitzgerald	445
36	Size-Exclusion Chromatography Paul Cutler	451
37	Hydrophobic Interaction Chromatography Paul A. O'Farrell	461
38	Affinity Chromatography George W. Jack	469

39	Reversed-Phase HPLC Bill Neville	479
40	Glycoprotein Analysis Terry D. Butters	491
41	Protein Sequencing Bryan J. Smith and John R. Chapman	503
42	Solid-Phase Peptide Synthesis Gregg B. Fields	527
43	Protein Engineering Sudhir Paul	547
44	Monoclonal Antibodies Christopher Dean and Helmut Modjtahedi	567
45	Phage-Display Libraries Julia E. Thompson and Andrew J. Williams	581
46	Enzyme-Linked Immunosorbent Assay (ELISA) John R. Crowther	595
47	Epitope Mapping: <i>Identification of Antibody Binding Sites on Protein Antigens</i> Glenn E. Morris	619
48	Immunocytochemistry Lorette C. Javois	631
49	Flow Cytometry Robert E. Cunningham	653
50	Mass Spectrometry John R. Chapman	669
51	The Technique of <i>In Situ</i> Hybridization: <i>Principles and Applications</i> Desiré du Sart and K. H. Andy Choo	697
	Index	721
