1. MEASUREMENT OF STEROID HORMONE CONCENTRATIONS IN BLOOD, URINE AND TISSUES

1

Brian Cook and Graham H. Beastall

Steroids and Their Inter-relationships	1
Steroid metabolism and excretion	2
Normal ranges and their expression	4
Techniques for Steroid Assay	5
Preparation of Samples for Assay	8
Blood	8
Urine	8
Tissues	9
Saliva	9
Principle of Radioimmunoassay	10
Production of antisera	11
Radioactive labels	16
Separation of antibody-bound and free radioactive label	19
Comparison of typical assays by major methods	28
Individual steroid assays	28
Development and maintenance of assays	34
Future trends	46
Summary and conclusions	50
Gas-Liquid Chromatography	53
Instrumentation for the use of capillary columns	54
Generation of steroid profiles	54
Typical applications	61
Summary and conclusions	62
Acknowledgements	65
References	65

2. STEROID HORMONE RECEPTORS: ASSAY AND CHARACTERIZATION

67

Robin E. Leake and Fouad Habib

General Introduction	67
Basis of steroid receptor analyses	67
An Assay for Estrogen Receptors	68
Tissue collection and storage	68
Preparation of soluble and nuclear fractions	69
Estrogen receptor assay - procedure	69
Preparation of nuclear salt extracts	73
Additional precautions and alternative methods	74

Assay of Progesterone Receptors	75
Tissue collection and storage	75
Preparation of soluble and nuclear fractions	75
Progesterone receptor assay (details)	75
Androgen Receptor Assay	76
Tissue collection and storage	77
Preparation of soluble and nuclear fractions	77
Preparation of nuclear salt extracts	77
Androgen receptor assay of human prostate tissue	77
Salt-resistant nuclear binding — nuclear matrix	81
Clinical Applications of Sex Steroid Receptor Measurement	82
The cytoplasmic receptors	82
Nuclear receptors	82
Assay for Glucocorticoid Receptors	83
Receptor stability and ligand selection	83
Receptor assays in cell-free subcellular fractions	83
Receptor measurements in intact cells	85
Other Steroid Hormones	86
Purification of Receptors	86
Selection and storage of starting material	86
Initial extraction of crude receptor	87
Preparation of affinity column	87
Application of cytosol to the affinity column	87
Covalent Labelling of Steroid Receptors	87
Covalent labelling of estrogen receptor with tamoxifen—aziridine	88
Photoaffinity labelling of progesterone receptor with R5020 (Promegestone)	89
Expression of Results	90
Determination of DNA content of tissues	91
Conclusions	91
Acknowledgements	91
References	91
Appendix	93
3. CLONING OF STEROID-RESPONSIVE GENES	99
Stephen J.Higgins and Malcolm G.Parker	
Introduction	99
General Considerations for Cloning Steroid-responsive Genes	99
Complexity of eukaryotic genomes	99
General cloning strategy	100
Genomic and cDNA libraries	100
Host-vector systems	101
Isolation of Nucleic Acids for Cloning	105
Problems and precautions	105

75	Choice of tissue and extraction method	106
75	Isolation of high molecular weight DNA	106
75	Isolation of RNA	108
75	Fractionation of RNA	109
76	Integrity of RNA and DNA preparations	111
77	Construction of cDNA Libraries	112
77	General considerations	112
77	Synthesis of single-stranded cDNA	113
77	Synthesis of double-stranded cDNA	115
81	Construction of cDNA libraries in plasmid vectors using	
82	homopolymer tailing	117
82	Construction of cDNA libraries in phage λ gt11 expression vector	122
82	Construction of Genomic Libraries	125
83	Strategies in constructing genomic libraries	125
83	Preparation of phage λ DNA for cloning	126
83	Preparation of genomic DNA for cloning	130
85	Ligation and packaging of recombinant DNA	130
86	Amplification and storage of genomic libraries	131
86	Screening of Gene Libraries	132
86	General considerations	132
87	Probes for hybridization	133
87	Screening of cDNA libraries by colony hybridization	139
87	Screening of genomic libraries by plaque hybridization	140
87	Screening with oligonucleotide probes	141
87	Screening expression libraries	143
88	Storage of recombinant plasmids and phage	144
9	Characterization of Steroid-responsive Genes	144
0	Introduction	144
1	Hybrid selection	144
	Restriction mapping	147
	Physical arrangement of cloned genes	147
	Nucleotide sequencing	152
	Identification of the transcriptional start point of the gene	152
	Concluding Remarks	153
	References	153

4. ANALYSIS OF STEROID-RESPONSIVE GENES BY GENE TRANSFER

	Malcolm G. Parker and Stephen J. Higgins	157
	Introduction	157
	Basic Approaches	157
	Requirements for gene transfer	157
	Stable and transient expression of cloned DNA in recipient cells	158
	Methods for Introducing DNA into Cells	159
	Calcium phosphate transfection method	159

Modifications to the basic transfection method	161
The DEAE-dextran procedure	162
Recipient Cells for Studying Expression of Steroid-responsive Genes	162
Availability of suitable steroid-responsive cell lines	162
Cell culture conditions	163
Vectors for Introducing Genes into Cells	163
Introduction	163
Selectable marker genes	164
Marker genes for analysing promoter activity	167
Methods of Analysis	168
General considerations	168
Detection and structural analysis of transfected genes	170
Analysis of RNA transcripts by primer extension	172
Assay of CAT in transient expression studies	175
Examples of Steroid-responsive Transfected Genes	177
References	177
5. STEROID RECEPTOR BINDING TO DNA SEQUENCES	179
Claus Scheidereit and Miguel Beato	
Introduction	179
Binding Methods with Crude Receptor Preparations	179
DNA-cellulose competition assay	180
Immunodetection of DNA-receptor complexes	181
Binding Methods with Purified Receptors	183
Purification of the hormone receptors	183
Nitrocellulose filter binding assay	185
Footprinting experiments	191
Interference Techniques	200
Concluding Remarks	202
Acknowledgements	203
References	203
6. STEROID RESPONSE IN VIVO AND IN VITRO	205
Robin E. Leake, R. Ian Freshney and Idrees Munir	
General Introduction	205
Primary Culture of Breast Epithelial Cells	205
Preparation of confluent feeder layers	206
Growth experiments using primary cultures of breast cells	207
Growth of Uterine Endometrial Epithelial Cells in Primary Culture	211
Standard culture conditions for endometrial epithelial cells	212
Substrate coating	212
Culture of rat uterine cells	212
Preparation of charcoal-stripped and heat-inactivated fetal calf serum	213

161	Culture of cells in serum-free media	214
162	Estrogenic activity of phenol red	214
162	Growth of Glioma Cells in Cell Culture	214
162	Primary Culture of Prostatic Epithelial Cells	214
163	Steroid-responsive Cell Lines	215
163	Autoradiography of Cultured Cells	216
163	Quantitation of [^3H]Thymidine Incorporation	216
164	Conclusions	216
167	References	218
168	7. ANTI-HORMONES AND OTHER STEROID ANALOGUES	219
170	Alan E. Wakeling	
172	Introduction	219
175	Estrogens and Anti-estrogens	220
177	Principles	220
177	Methods	221
	Effects of methodology on apparent RBA values	224
179	Receptor binding and biological response	227
	Other Steroidal Analogues	228
79	Glucocorticoid analogues	229
80	Mineralocorticoid analogues	232
81	Progesterone analogues	233
83	Androgen analogues	233
83	Conclusions	234
85	Acknowledgements	235
85	References	235
85	APPENDIX	
	Suppliers of Specialist Items	237
	INDEX	241
	Index of Steroid Hormones and Synthetic Analogues	261
