1	An introduction to systems genetics	1
	Florian Markowetz and Michael Boutros	
1.1	Definition of systems genetics	1
1.2	History of systems genetics	3
1.3	Future challenges	7
1.4	What is covered in the book	8
2	Computational paradigms for analyzing genetic interaction networks	12
	Carles Pons, Michael Costanzo, Charles Boone, and Chad L. Myers	
2.1	Definition of genetic interaction	12
2.2	Toward the first reference global genetic interaction network: Synthetic Genetic Array analysis in yeast	15
2.3	Computational paradigms for genetic interaction networks	17
2.4	Perspectives	29
3	Mapping genetic interactions across many phenotypes in metazoan cells	36
	Christina Laufer, Maximilian Billmann, and Michael Boutros	
3.1	A short history of genetic interaction analysis	36
3.2	Perturbation-based genetic interaction studies in yeast	37
3.3	Genetic interaction analysis in <i>Drosophila</i>	39
3.4	Expanding genetic interaction mapping towards the genomic scale	42
3.5	Towards genetic interaction mapping in human cells	45
3.6	Conclusions	48
4	Genetic interactions and network reliability	51
	Edgar Delgado-Eckert and Niko Beerenwinkel	
4.1	Biological networks	51
4.2	Epistasis	52

4.3	Network reliability	54
4.4	Epistasis on networks	57
4.5	Inferring function from observed genetic interactions	59
4.6	Conclusions	61
5	Synthetic lethality and chemoresistance in cancer	65
	Kimberly Maxfield and Angelique Whitehurst	
5.1	Cancer chemotherapy	65
5.2	Employing small interfering RNA (siRNA) to identify modifiers of chemotherapeutic responsiveness	68
5.3	Mobilizing new therapeutic opportunities with large-scale RNAi screens	74
5.4	Conclusions	77
6	Joining the dots: network analysis of gene perturbation data	83
	Xin Wang, Ke Yuan, and Florian Markowetz	
6.1	Scenario 1: Genome-wide screens with single reporters	83
6.2	Scenario 2: Single gene silenced, multi-level dynamic phenotype	86
6.3	Scenario 3a: Pathway components perturbed with global transcriptional phenotypes	86
6.4	Scenario 3b: Capturing rewiring events during network evolution	92
6.5	Scenario 4: Multi-parametric screen, up to genome-wide	96
6.6	Conclusions	102
7	High-content screening in infectious diseases: new drugs against bugs	108
	André P. Mäurer, Peter R. Braun, Kate Holden-Dye, and Thomas F. Meyer	
7.1	The challenge of fighting infectious diseases	108
7.2	Classic strategies for antimicrobial drug development and their limitations	109
7.3	Post-genomic approaches for investigating host-pathogen interactions	115
7.4	Advanced high-content screening in pathogen research	121
7.5	Single-cell population analyses in high-content screening	129
7.6	Future directions	131
8	Inferring genetic architecture from systems genetics studies	139
	Xiaoyun Sun, Stephanie Mohr, Arunachalam Vinayagam, Pengyu Hong, and Norbert Perrimon	
8.1	Introduction	139
8.2	Identification of network components by RNAi	141
8.3	Identification of network components using proteomics	145
8.4	Integration of RNAi and proteomic data sets	148
8.5	Network modeling: the next step	149
8.6	Applications of network reconstruction	155

9	Bayesian inference for model selection: an application to aberrant signalling pathways in chronic myeloid leukaemia	161
	Lisa E. M. Hopcroft, Ben Calderhead, Paolo Gallipoli, Tessa L. Holyoake, and Mark A. Girolami	
9.1	The oncology of chronic myeloid leukaemia	161
9.2	Introduction to model comparison	170
9.3	Modelling the JAK/STAT pathway in response to TKI and/or JakI	171
9.4	The statistical methodology: Riemannian manifold population MCMC	174
9.5	A proof-of-concept study with synthetic data	178
9.6	Beyond a proof of concept: considering a more biologically realistic dataset	181
9.7	Discussion	187
10	Dynamic network models of protein complexes	191
	Yongjin Park and Joel S. Bader	
10.1	Dynamic network data	191
10.2	Block models of a network	195
10.3	Learning algorithms	197
10.4	Results	203
10.5	Discussion	209
11	Phenotype state spaces and strategies for exploring them	214
	Andreas Hadjiprocopis and Rune Linding	
11.1	Introduction	214
11.2	Phenotype: a constructive generality	215
11.3	Cellular noise	216
11.4	Genome evolution, protein families, and phenotype	217
11.5	Complex networks	222
11.6	Random Boolean networks	223
11.7	Genomic state spaces	229
12	Automated behavioural fingerprinting of <i>Caenorhabditis elegans</i> mutants	234
	André E. X. Brown and William R. Schafer	
12.1	The worm as a model organism	234
12.2	High-throughput data collection and information extraction	238
12.3	Linking behaviours and genes	243
12.4	Outlook	246
12.5	Conclusions	251
	<i>Index</i>	257

The colour plate section can be found between pages 148 and 149.
