

CONTENTS IN BRIEF

Contents	ix
Preface	xiii
1 Introduction	1
2 The Diversity of Membrane Lipids	14
3 Tools for Studying Membrane Components: Detergents and Model Systems	42
4 Proteins in or at the Bilayer	69
5 Bundles and Barrels	105
6 Functions and Families	130
7 Protein Folding and Biogenesis	168
8 Diffraction and Simulation	203
9 Membrane Enzymes	226
10 Membrane Receptors	257
11 Transporters	284
12 Channels	328
13 Electron Transport and Energy Transduction	358
14 In Pursuit of Complexity	385
Appendix I: Abbreviations	393
Appendix II: Single-Letter Codes for Amino Acids	397
Index	399

CONTENTS

<i>List of boxes</i>	xiii	Membrane solubilization	49
<i>Preface</i>	xiv	Lipid removal	51
1 INTRODUCTION	1	Model membranes	51
General features of membranes	1	Monolayers	52
Paradigm 1: the amphiphilic molecules in membranes assemble spontaneously due to the hydrophobic effect	4	Planar bilayers	54
Paradigm 2: the Fluid Mosaic Model describes the membrane structure	5	Patch clamps	57
A shift in the paradigm: biomembranes have lateral domains that form "rafts"	9	Supported bilayers	57
A view for the future: dynamic protein complexes crowd the membrane interior and extend its borders	9	Liposomes from SUVs to GUVs	60
For further reading	13	Multilamellar vesicles	60
		Small unilamellar vesicles	61
2 THE DIVERSITY OF MEMBRANE LIPIDS	14	Large unilamellar vesicles	61
The acyl chains	14	Short-chain/long-chain unilamellar vesicles	62
Complex lipids	17	Giant unilamellar vesicles	62
Phospholipids	19	Mixed micelles and bicelles	63
Sphingolipids	20	Blebs and blisters	64
Sterols and linear isoprenoids	21	Nanodiscs	66
The lipid bilayer matrix	22	Conclusion	67
Structure of bilayer lipids	22	For further reading	67
Diffusion of bilayer lipids	24		
Lipid asymmetry and membrane thickness	27	4 PROTEINS IN OR AT THE BILAYER	69
Lipid polymorphism	28	Classes of proteins that interact with the membrane	69
Lamellar phase	28	Proteins at the bilayer surface	70
Hexagonal phase and the amphiphile shape hypothesis	29	Extrinsic/peripheral membrane proteins	70
Cubic phase	30	Amphitropic proteins	74
Miscibility of bilayer lipids	31	Lipid-anchored proteins	74
Lateral domains and lipid rafts	34	Reversible interactions of peripheral proteins with the lipid bilayer	77
Detergent-resistant membranes	35	Effects of peripheral protein binding on membrane lipids	77
Diversity of lipids	37	Interactions between peripheral proteins and lipids	78
Conclusion	39	Domains involved in binding the membrane	81
For further reading	41	Curvature	83
		Modulation of binding	84
3 TOOLS FOR STUDYING MEMBRANE COMPONENTS: DETERGENTS AND MODEL SYSTEMS	42	Proteins and peptides that insert into the membrane	85
Detergents	43	Toxins	86
Types of detergents	43	Colicins	88
Mechanism of detergent action	46	Peptides	88
		SecA: protein acrobatics	90
		Proteins embedded in the membrane	91
		Monotopic proteins	91
		Integral membrane proteins	91
		Protein-lipid interactions	97
		Hydrophobic mismatch	101
		For further reading	103

5 BUNDLES AND BARRELS**105****Helical bundles****105**

Bacteriorhodopsin

105

Photosynthetic reaction center

109

The proteins

110

Lipids

112

The cofactors

112

Antennae

113

The reaction cycle

114

 β -barrels**115**

Porins

117

OmpF and OmpC

118

VDAC, a mitochondrial porin

122

Specific porins

123

PhoE, the phosphoporin

123

LamB, the maltoporin

124

Other β -barrel transporters

124

Iron receptors

125

Outer membrane secretory proteins:

126

not β -barrels

126

Conclusion**127****For further reading****127****6 FUNCTIONS AND FAMILIES****130****Membrane enzymes****130**

Diacylglycerol kinase

132

Presenilin, an intra-membrane protease

134

P450 cytochromes

136

Transport proteins**137**

Transport classification system

138

Superfamilies of ATPases

139

ABC transporter superfamily

140

Group translocation

140

Symporters

142

Antiporters

142

Ion channels

143

Membrane receptors**144**

Nicotinic acetylcholine receptor

144

G protein-coupled receptors

145

Bioinformatics tools for membrane**146**

protein families

146

Predicting TM segments

148

Hydrophobicity plots

149

Orientation of membrane proteins

149

The positive-inside rule

150

Inverted repeats

151

Genomic analysis of membrane proteins

153

Helix-helix interactions**162****Proteomics of membrane proteins****163****Predicting β -barrels****164****For further reading****165****7 PROTEIN FOLDING AND BIOGENESIS****168****Protein folding****169**Folding α -helical membrane proteins

170

bR folding studies

173

Folding studies of β -barrel membrane

175

proteins

177

Other folding studies

178

Whole protein hydrophobicity scale

178

Biogenesis of membrane proteins**178**

Export from the cytoplasm

180

The translocon

187

The translocon structure

187

TM insertion

189

Biological hydrophobicity scale

191

Topogenesis in membrane proteins

195

Misfolding diseases**198****For further reading****201****8 DIFFRACTION AND SIMULATION****203****Back to the bilayer****203****Liquid crystallography****204**

Liquid crystal theory

206

Joint refinement of x-ray and neutron
diffraction data

207

Modeling the bilayer**209**

Simulations of lipid bilayers

209

Molecular dynamics

209

Monte Carlo

213

Lipids observed in x-ray structures**215**

of membrane proteins

215

Crystallography of membrane proteins**219****A multidisciplinary approach****223****For further reading****225****9 MEMBRANE ENZYMES****226****Prostaglandin H₂ synthase****227****OMPLA****230****Membrane proteases****234**

OmpTins

234

Intramembrane proteases

235

Rhomboid protease

236

Structure of the bacterial rhomboid GlpG

237

Formate dehydrogenase	239	The vitamin B₁₂ uptake system	310
P-type ATPases	243	BtuCD-BtuF, an ABC transport system	311
Ca ²⁺ ATPases	243	BtuB, an outer membrane transporter energized by TonB	313
Na ⁺ , K ⁺ ATPase	250	Drug efflux systems	316
Other P-type ATPases	254	Sav1866 and P-glycoprotein, ABC exporters	316
Conclusion	255	EmrE, an example of dual topology	318
For further reading	255	Tripartite drug efflux via a membrane vacuum cleaner	320
 		AcrB, a peristaltic pump	321
10 MEMBRANE RECEPTORS	257	Alternating site mechanism of AcrB	322
 		AcrA, a periplasmic adaptor protein	323
G protein-coupled receptors	258	TolC, the channel-tunnel	323
Rhodopsin, a light-sensitive GPCR	259	Partners of TolC	325
Ground state rhodopsin	260	Conclusion	325
Activated rhodopsin	261	For further reading	326
Rhodopsin as prototype	263		
Adrenergic receptors	267	 	
β ₂ AR structure	268	12 CHANNELS	328
β ₁ AR structure	270	 	
Activated β ₂ AR in complex with G _s	270	Aquaporins and glycerol aquaporins	329
Neurotransmitter receptors	274	Structure of aquaporins	330
Glutamate receptors: GluA2	274	Glycerol aquaporins: GlpF	331
Cys-loop receptors and GluCl	278	Human aquaporins: AQP4	333
Conclusion	282	Potassium channels	335
For further reading	282	KcsA structure and selectivity	336
 		Gating and activation	337
11 TRANSPORTERS	284	Voltage gating	339
 		Gating in human potassium channels	341
Secondary transporters	284	Chloride channels and the CLC family	343
MFS transporters	285	ClC-ec1	344
LacY, a scrutinized symporter	285	CLC channels as "broken transporters"	346
GlpT, an MFS antiporter	288	Mechanosensitive ion channels	347
EmrD, an MFS exporter in an occluded conformation	289	MscL	349
FucP, an MFS symporter in co conformation	290	MscS	350
A paradigm for MFS transporters	291	MS channel gating	351
Mitochondrial ADP/ATP carrier	291	Gap junction channels	354
AAC structure	291	Conclusion	356
Neurotransmitter transporters	294	For further reading	356
Glutamate transporters and GltPh	294		
Neurotransmitter sodium symporters and LeuT	296	 	
LeuT structure	298	13 ELECTRON TRANSPORT AND ENERGY TRANSDUCTION	358
Transport mechanism of LeuT	300	 	
The NSS family and the LeuT (APC-fold) superfamily	300	Complexes of the respiratory chain	359
BetP and osmoregulated transport	303	Complex I	359
ABC transporters and beyond	306	Conformational coupling mechanism	363
Maltose transporter	306	Cytochrome bc₁	365
		The Q cycle	366
		High-resolution structures	366

Cytochrome c oxidase	371	14 IN PURSUIT OF COMPLEXITY	385
High-resolution structures	371		
Oxygen reduction	373	Complex formation	386
Proton pathways	374	Conformational changes and dynamics	390
F₁F₀-ATP synthase	375	For further reading	392
Subunit structure and function	377		
F ₁ Domain	377	<i>Appendix I: Abbreviations</i>	393
F ₀ Domain	379	<i>Appendix II: Single-Letter Codes for Amino Acids</i>	397
Regulation of the F ₁ F ₀ -ATPase	379	<i>Index</i>	399
Catalytic mechanism of a rotary motor	380		
Rotational catalysis	380		
Conclusions	383		
For further reading	383
