<i>Foreword</i>	page xiv
<i>Preface</i>	xvii
<i>Acknowledgments</i>	xx
1 Conceptual introduction	1
1.1 The concept of spatio-temporal heterogeneity: views and perspectives	1
1.2 The Space-Time Response Cube	5
1.3 Overview	13
2 Spatio-temporal stochastic processes: definitions and properties	15
2.1 Observed patterns, indices, and stochastic processes	15
2.2 The fundamental equation	19
2.3 Properties of spatio-temporal stochastic processes	23
2.4 Illustrations by simulation	32
2.5 Extensions of the fundamental equation	50
2.6 Recommended readings	53
A2 Appendix: Population parameters and the expectation operator	53
A2.1 The univariate case	54
A2.2 The multivariate case	56
3 Heterogeneity analysis of spatial point patterns	58
3.1 Preamble	58
3.2 Univariate spatial point patterns	61
3.2.1 Simulated examples in 2-D space	62
3.2.2 Scale effects	63
3.2.3 The count-based approach	65
3.2.4 The distance-based approach	71
3.2.5 Examples with real data	83

3.3	Marked spatial point patterns	91
3.3.1	The distance-based approach	92
3.3.2	Other examples with real data	92
3.4	The beta-binomial distribution	98
3.5	The multivariate case	102
A3	Appendix: Intensity functions and simulation procedures	107
A3.1	Calculation of population parameters for quadrat counts	107
A3.2	Simulation of partial realizations of point processes	111
4	Heterogeneity analysis of temporal and spatio-temporal point patterns	116
4.1	Temporal point patterns	116
4.1.1	The univariate case	117
4.1.2	Applications to real data	121
4.1.3	Time-dependent transition probabilities	124
4.2	Spatio-temporal point patterns	134
4.2.1	Distances and counts	134
4.2.2	Point processes and movement	142
5	Heterogeneity analysis of point patterns: process modeling and summary	146
5.1	Elements of point process modeling	146
5.1.1	Modeling of first-order intensity function	147
5.1.2	Modeling of second-order moment functions	150
5.1.3	Modeling of nearest-neighbor distance distributions	154
5.1.4	Ripley's functions and their conditions of application: a review	157
5.2	General summary	161
5.3	Recommended readings	163
6	Heterogeneity analysis of time series	165
6.1	Preamble	165
6.2	Temporal autocorrelation analysis	168
6.2.1	Estimation in the time domain	174
6.2.2	Estimation in the frequency domain	183
6.3	Analysis of temporal heterogeneity of the mean	187

6.3.1	Polynomial models without, vs. with, autocorrelated errors	188
6.3.2	Purely trigonometric models and extensions	193
6.4	Analysis of temporal heterogeneity of the variance	202
6.5	Relationships between analytical methods	208
6.6	Temporal cross-correlation analysis	209
6.6.1	Estimation in the time domain	209
6.6.2	Estimation in the frequency domain	211
6.7	Recommended readings	217
A6	Appendix: Simulation procedures and mathematical developments	218
A6.1	Simulation of partial realizations of discrete-time processes	218
A6.2	Construction of orthogonal polynomials with Gram-Schmidt procedure	219
A6.3	Least-squares fitting procedures for linear models and nonlinear models whose parameters separate	221
7	Heterogeneity analysis of spatial surface patterns	224
7.1	Spatial autocorrelation analysis	225
7.1.1	Spatial correlograms	232
7.1.2	Direct experimental variograms	237
7.2	Joint analysis of spatial heterogeneity of the mean and spatial autocorrelation	239
7.2.1	The univariate case	240
7.2.2	The multivariate case	249
7.3	Analysis of spatial heterogeneity of the variance	265
7.4	The Mantel test: use and misuse	268
7.5	Recommended readings	274
A7	Appendix: Simulation procedures and geostatistical complements	275
A7.1	Simulation of partial realizations of spatial stochastic processes	275
A7.2	The linear model of coregionalization	277
8	Heterogeneity analysis of spatio-temporal surface patterns	280
8.1	How to approach the heterogeneity analysis of a spatio-temporal surface pattern?	281

8.2	Coregionalization analysis with a drift	284
8.2.1	MSH air temperature example (CRAD)	285
8.2.2	MSH soil temperature example (CRAD)	291
8.3	State-space models	297
8.3.1	MSH air-soil temperature example (state-space model analysis)	301
8.3.2	MSH air-soil temperature example (cross-correlogram analysis)	302
8.4	Mantel analysis with spatial and temporal distances	306
8.4.1	MSH air-soil temperature example (first Mantel analysis)	307
8.4.2	MSH air temperature example (second Mantel analysis)	311
8.5	Recommended readings	313
9	Sampling and study design aspects in heterogeneity analysis of surface patterns	314
9.1	Sampling aspects	315
9.1.1	Basic sampling designs	315
9.1.2	Comparison of sampling designs when heterogeneity of the mean is of interest	318
9.1.3	Comparison of designs when heterogeneity due to autocorrelation is of interest	319
9.2	Study design: fundamental theoretical aspects	325
9.2.1	Experimental designs and analysis of variance: an overview	325
9.2.2	The key: the expected mean squares	331
9.2.3	Effective df and Box's "epsilon": measures of spatial and temporal heterogeneity	340
9.3	Study design: more applied aspects	346
9.3.1	Assessment of between-subject and within-subject effects in the ANOVAR	347
9.3.2	Examples in time, space and space-time	350
9.4	Recommended readings	361
A9	Appendix: Matrix algebra complements	364
A9.1	How to write ANOVA sums of squares as quadratic forms	364
A9.2	Properties of quadratic forms in normal random vectors	366

10 Conclusions**369**

10.1 Concluding remarks

369

10.2 Final thoughts and closing word
