

CONTENTS

<i>Preface</i>	<i>page v</i>
--------------------------	---------------

LECTURE I

The Development of Behaviour and its Anatomical Explanation in a Typical Vertebrate

The adaptability of <i>Amblystoma</i> to the problem	<i>page 2</i>
The development of aquatic locomotion	5
Five physiological stages	9
Anatomical explanation of the coil	10
The swimming mechanism	14
Two further goals of behaviour	17
Movement of the arms	18
Local reflexes of the fore limb	18
The relation of posture to local reflex	21
Anatomical explanation of dominance of the trunk over the arm	22
Hind limb movement	23
The development of terrestrial locomotion	23
The mechanism of co-ordination in walking	29
Movements of the gills	30
The anatomical explanation of dominance of the trunk over the gills	30
The feeding reaction	33
Anatomical explanation of the feeding reaction	34
Summary	36

LECTURE II

Dynamic Antecedents of Neural Mechanisms

Forces of integration in lower organisms	40
Preneural gradients in <i>Amblystoma</i>	42
Anatomical relations of the preneural gradients	45
Histological features of the parts concerned	49

Physical and physiological processes involved . . .	page 50
Differentiation of neuroepithelial cells . . .	52
Axial gradients and polarity of longitudinal neurones . . .	54
Differentiation in localized centres . . .	60
Localized centres of differentiation and the development of conduction paths . . .	68
Localized centres of differentiation and secondary gradients . . .	74
Statement of the problem . . .	76
Overlap of preneural upon neural processes . . .	77

LECTURE III

Growth of the Nerve Cell and the Interpretation of Behaviour

Learning as development of behaviour . . .	79
Inadequacy of the neurone concept . . .	81
The form of the behaviour pattern vs. the conditioning of performance . . .	86
"Gestalt" in determining the form of behaviour . . .	87
Growth of functional neurones and the integrity of the individual . . .	90
The mechanism of individuation . . .	91
"Forward reference" in the conditioning mechanism . . .	92
Differentiation in the cerebral cortex . . .	94
Progressive consolidation of the associational into the motor mechanisms . . .	95
Growth and specificity of function in nervous mechanisms . . .	97
Differential sensitivity in the cerebral cortex . . .	101
Structural counterparts of behaviour . . .	104
"Gestalt" in the conditioning mechanism . . .	105
Growth as the creative function of the nervous system . . .	108
The measure of the individual . . .	109
<i>Literature cited</i> . . .	111
