Note on names of plants xiv

List of abbreviations xv

1 Investigating plant variation and evolution 1

2 From Ray to Darwin 4

Ray and the definition of species 4

The Great Chain of Being 5

Linnaeus 6

Buffon and Lamarck 10

Darwin 11

Tests of specific difference 21

3 Early work on biometry 23

Biometrics and eugenics 23

Biometrical studies of plants 24

Commonest occurring variation in an array 25

Estimates of dispersion of the data 26

Histograms, frequency diagrams and the normal distribution curve 27

Other types of distribution 28

Comparison of different arrays of data 28

Complex distributions 29

Local races 32

Correlated variation 33

Problems of biometry 35

4 Early work on the basis of individual variation 37

Phenotype and genotype 38

Transplant experiments 39

Mendel's experiments 41

Pangenesis 46

Mendelian ratios in plants 47

Mendelism and continuous variation 48

Physical basis of Mendelian inheritance 51

The development of plant cytology 55

Chromosome number 56

Chromosome changes 59

Non-Mendelian inheritance 59

Patterns of variation 60

Phenotypic variation 60

The extent of phenotypic variability in plants 61

Developmental variation 62

Phenotypic plasticity 64

Some early experiments 64

Individual variation in plants 66

5 Post-Darwinian ideas about evolution 67

Experimental investigation of evolution 67

The mutation theory of evolution 70

The Evolutionary Synthesis 71

Elements of the New Synthesis 71

Coda 73

6 DNA: towards an understanding of heredity and molecular evolution 74

DNA: its structure and properties 74

Replication of DNA 75

Transcription and translation of genetic information 76

Mutation of DNA 78

Exchanges of DNA segments 79

Gene silencing: epigenetic modification of DNA 79

The plant cell: adaptive, neutral and junk DNA 81

DNA in the nucleus 82

Centromeres 83

Telomeres 83

B chromosomes 83

The concept of junk DNA revisited 84

DNA in plant cells: mitochondria and chloroplasts 85
 Evolutionary changes in the chloroplast structure 86
 Genetics of chloroplasts and mitochondria 86
Arabidopsis thaliana: its role as a model species 86
 Studying developmental processes: the role of model plants 88
 Phylogenetic studies 89
 Common origin to life on Earth 89
 Advances in comparative genomics 90
 Palaeopolyploidy and chromosomal changes 92
 Duplicated genes 92
 Techniques for studying genetic variation 93
 Selecting marker systems to test hypotheses 95
 Concluding remarks 96

7 Breeding systems 98

- A. The different breeding systems found in flowering plants 98
 Outbreeding 98
 Molecular studies of self-incompatibility systems 102
 Homomorphic and heteromorphic incompatibility systems 103
 Late-acting self-incompatibility systems 104
 Self-fertilisation 105
 Apomixis 106
 Agamospermy 107
 Apomictic phenomena 108
 Embryology of apomixis 109
 Apomictic behaviour 111
 Diplospory 111
 Apospory 111
 The role of pollen in the evolution of apomictic plants 112
 Genetics of apomixis 113
 Molecular nature and origin of apomixis 113
 Some dogmas about seed apomixis 114
 B. Breeding behaviour discovered in studies of wild populations 114
 Consequences of different reproductive modes 114
 Advantages and disadvantages of different breeding systems 116

Reproductive assurance and the genetic 'quality' of progeny 118
 Breeding systems in wild populations 119
 Outbreeding combined with vegetative reproduction 119
 Outbreeding in association with vivipary 119
 Outbreeding combined with occasional self-fertilisation 120
 Outbreeding combined with regular self-fertilisation 121
 Mixed reproduction: selfing and outcrossing in different proportions 122
 Facultative and obligatory apomixis 124
 Environmental control of facultative apomixis 125
 C. Evolution of breeding systems 126
 Some concluding remarks 132

8 Intraspecific variation and the ecotype concept 135

Turesson's pioneer studies and other experiments 135
 Experiments by American botanists 139
 The widespread occurrence of ecotypes 144
 Clines 144
 Factors influencing the variation pattern 147
 The refining of genecological experiments 147
 Sampling populations 148
 Cultivation experiments 151
 The designed experiment 154
 The interpretation of experiments 159

9 Pattern and process in plant populations 160

Variation within and between populations 161
 Selection in populations 161
 Selection in changing populations: r- and K-selection 164
 Fitness 165
 Developments in the investigation of populations 165
 Selection: the study of single factors 166
 Studies of several interacting factors: *Lotus* and *Trifolium* 166

Distribution of cyanogenic variants	168
The role of herbivory	168
Small-scale influences on patterns and process in cyanogenic species	172
Reciprocal transplant experiments	173
Experimental evidence for disruptive selection	173
Comparing 'young' and 'adult' generations	176
Co-selection in swards	177
The speed of microevolutionary change: agricultural experiments	177
Rapid change in polluted sites	178
Origin of metal-tolerant populations	181
Hyperaccumulation	182
Serpentine ecotypes	183
Sulphur dioxide tolerance	184
Ozone tolerance	184
Evolution in arable areas	185
Herbicide resistance	186
Weed evolution	188
Ecotypic variation in response to seasonal or irregular extreme habitat factors	188
Phenotypic modification and genetic differentiation	189
The use of model plants in the study of microevolution	190
Detecting the signature of selection from genomic studies	190
Studies of local adaptation involving cultivation experiments	191
Combined studies of crucial life cycle traits	192
<i>Arabidopsis</i> : experiments on phenotypic plasticity	193
Adaptive and non-adaptive characters	196
Concluding remarks	199

10 Pattern and process: factors

interacting with natural selection	201
Chance has profound effects	201
Gene flow: population variability and structure	201
Gene flow: early ideas	202
Gene flow: agricultural experiments	203
Gene flow: historic insights from the movement of pollen	203
Gene flow: historic studies of seed dispersal	205
'Neighbourhoods' in wild populations	206

Gene flow: studies using molecular tools	207
Gene flow: insights from the use of microsatellite markers	208
Gene flow by pollen movement	210
Animal-pollinated trees and shrubs	211
Seed/fruit dispersal	212
Recent insights into gene flow from the study of transgenic crop plants	212
Knowledge of gene flow is critical in plant conservation	214
Gene flow: future directions of research	215

11 Populations: origins and extinctions

Metapopulations	216
Founding events and bottleneck effects	217
Designing experiments	218
Case histories of founder events	218
Founder effects in weedy and ornamental species	219
Tracing the origin and spread of new populations	220
Identification of sources of introduced taxa	220
Once introduced, some species fail to establish	222
Development of populations: the lag phase	222
Changes in populations following introduction	223
Phenotypic plasticity and developmental adaptability	223
What factors contribute to the success of new populations?	226
Population persistence and stability: clonal growth	228
Size and longevity of clones: new insights using molecular markers	229
Implications of clonal growth in populations	229
Another major factor influencing population persistence: seed banks	232
Processes involved in the extinction of populations	233
Demographic stochasticity	233
Pollen limitation causes an Allee Effect	235
Effects of fragmentation	236
Genetics of small populations	237
Minimum viable populations	239
Concluding comments	240

12 Species and speciation: concepts and models 242

- The morphological species concept 242
- Species definitions: taking into account pattern and process 243
- The Evolutionary Species Concept 243
- Phylogenetic (cladistic) species concept 243
- Ecological species concept 243
- The Biological Species Concept 243
- Origins of species 245
- Gradual (Geographic) Speciation 246
- Abrupt speciation 246
- Polyploidy 246

13 Allopatric speciation and hybridisation 250

- Evidence for gradual speciation 251
- Crossing experiment with species of *Layia* 252
- The interpretation of crossing experiments 252
- Studies of *Layia* using molecular methods 254
- Phylogenetic studies of the Californian Tarweeds 255
- Speciation genes 255
- Pre-pollination mechanisms 256
- Post-pollination barriers 256
- Cytoplasmic male sterility: its possible role in speciation in plants 257
- Genomic changes involved in speciation 258
- Future prospects for the study of speciation genes and genomic architecture 258
- Allopatric speciation and the taxonomist 259
- Natural hybridisation 260
- Natural hybridisation in the wild: classic studies 260
- The consequences of hybridisation: some theoretical considerations 264
- Empirical studies of reinforcement 266
- The emergence of the concept of introgressive hybridisation 270
- Introgression: classic approaches championed by Anderson 271
- Genetic investigations of hybridisation 274
- Chemotaxonomy: historic investigations of hybridisation 275
- Critical tests of the hypothesis of introgression 276
- Studies of introgression using molecular tools 276

- Introgression in Louisiana Irises 278
- Asymmetric introgression 279
- Cytoplasmic capture 282
- Chloroplast capture: another route 283
- Transgressive hybridisation 283
- Can it be confirmed that adaptive traits are transferred from one species to another by introgression? 283
- Speciation: where future advances might come 284
- The role of hitchhiking in speciation 284
- Next generation sequencing technologies 285
- Zones of introgression: are they ephemeral or long-standing? 285
- Introgression: a key concept in microevolution 285
- Taxonomic considerations 286
- Introgression: its role in evolution 286

14 Abrupt speciation 287

- A. The emergence and testing of key concepts in the study of polyploidy 287
 - The concept of polyploidy: early cytogenetic studies 287
 - Resynthesis of wild polyploids 288
 - The concepts of auto- and allopolyploidy 289
 - The concept of genome analysis 291
 - Genome analysis: uncertainties about ancestry 292
 - Genetic control of chromosome pairing: the implications for genome analysis 294
 - Studies of karyotypes 295
 - Chemical studies 296
 - In situ* hybridisation (ISH) 297
 - Polytopic multiple origin of polyploids 297
- B. Recent insights into polyploidy from molecular studies 302
 - Key questions about polyploidy and its significance 302
 - How many species are polyploid? 302
 - The delimitation of taxa within polyploid groups 302
 - Chromosome counts provide insights into the incidence of polyploidy 303
 - Historic estimates of the incidence of polyploidy 303
 - Evidence from fossil plants 304
 - Genetic evidence 304

- Polyploidy in other plant groups 305
- The origin of new polyploids: the role of somatic events and unreduced gametes 305
- Unreduced gametes: major insights from the studies of molecular genetics 306
- Relative frequency of auto- and allopolyploidy 307
- Unreduced gametes: is polyhaploidy important in plant evolution? 307
- Polyploids: their potential for evolutionary change 307
- Meiosis in polyploids 308
- Evidence for structural changes in polyploids 309
- Gene silencing: epigenetic alterations in gene expression 310
- Transposable elements 311
- Polyploids: the implications of their recurrent formation 311
- Polyploids: cytogenetic changes in the longer term 311
- Becoming established: what 'hurdles' do polyploids face? 312
- Characteristics of polyploids as a group 313
- Polyploids: ecological considerations 313
- Polyploidy is often associated with a change in the breeding system 313
- Evidence for hybridisation between diploid and polyploid plants in the wild 316
- Reticulate patterns of variation in some groups 318
- Are polyploids more frequent in particular geographical areas? 318
- Current views on the present-day distribution of polyploids 321
- The implications of ancient polyploidy for studies of geographical distributions 321
- C. Other modes of abrupt speciation 322
- Changes in chromosome number 322
- Nested chromosome insertion 326
- Plants with diffuse centromeres 326
- Speciation following hybridisation: homoploid speciation 327
- Minority disadvantage 328
- Concluding remarks 329
- 15 The species concept 331**
- Species as part of natural classifications 331
- Mental reality of species 332
- Do species have evolutionary reality? 333
- The Biological Species Concept 333
- The views of botanical taxonomists 334
- Different definitions of species 335
- 16 Flowering plant evolution: advances, challenges and prospects 336**
- The devising of phylogenetic trees 336
- Classifications 336
- Weighting characters 338
- Numerical taxonomy 340
- The influence of numerical taxonomy 341
- Cladistics 342
- Molecular phylogenetic analysis 344
- Generation and analysis of molecular sequence data 346
- Cladograms 346
- The findings of molecular systematics 349
- Layout of trees 350
- Angiosperm phylogeny 351
- Mapping additional information onto phylogenetic trees 353
- Insights into evolutionary relationships provided by molecular phylogenetic studies 355
- Timescales and timetrees: the role of fossils and molecular clocks 359
- Universal or local clocks? 359
- Origin and age of the Angiosperms 360
- Floral evolution 362
- Molecular genetics of floral evolution 363
- The metaphor of the Tree of Life: its strengths and weaknesses 366
- How far do phylogenetic trees reveal the course of evolution? 366
- Plant evolution: limitations of the Tree of Life metaphor 370
- Angiosperm evolution: what role for saltational change? 371
- Constraints in evolution 375
- Genome sequencing: prospects for further insights into phylogeny 375

Classification and the Tree of Life 376
 Traditional taxonomy, cladism and molecular systematics 378

17 Historical biogeography 382

The Deluge and Noah's Ark 382
 The Deluge and plant distribution 382
 Eighteenth- and nineteenth-century investigations of plant geography 383
 Long-range dispersal: early investigations 383
 Land bridges: historic ideas 384
 Continental drift 384
 Pangaea and the geographical origin of the angiosperms 385
 Ancient extinctions 386
 The K-T extinction 387
 The Pleistocene 391
 Advances in plate tectonics on the interpretation of plant distributions 392
 Modern phylogeographical investigations of plant distributions 393
 Factors considered in modelling 394
 Long-range dispersal: new insights 395
 Single and recurrent long-range dispersal 396
 Evidence for back colonisation 397
 From which source(s) did long-distance migrants originate? 397
 Disjunctions: long-distance dispersal or vicariance? 398
 The investigation of 'divergence times' for taxa 399
 Mediterranean island endemics: dating and ancestral area reconstruction 400
 Phylogenetic studies of the opening of a land bridge 400
 Migration: implications of specialisation 400
 Quaternary Ice Ages: plant survival, migration and extinction 401
 Refugia in different parts of the world 404
 Implications of refuges 404
 Migration from refuges 405
 The refugial hypothesis of Amazonian speciation 407
 Palaeoecology: insights from the study of ancient DNA 407

Multidisciplinary approaches in biogeography: two case histories 408
 Concluding remarks 409

18 The evolutionary impact of human activities 411

Humans: as animals practising extreme niche construction 411
 Human impact on the environment 411
 The evolutionary effects of human activities 412
 Assessing human impacts on ecosystems: sources of evidence 412
 From natural ecosystems to cultural landscapes 413
 The extent of human-modified ecosystems 414
 Plants: their different roles on the cultural landscape stage 416
 Interactions between plants 418
 Do human activities present threats to biodiversity? 419
 Human influences: habitat loss and fragmentation 419
 Human influences: introduced organisms 420
 The ecological consequences of introduced species 422
 Human influences: the effects of pollution 422
 Eutrophication 423
 Acid Rain 423
 Human influences: global climate change 424
 The Greenhouse Effect 424
 Direct observation of climate change 425
 Predictions of future climate change 425
 Climate change: human influences 426
 Climate change sceptics and deniers 426
 Biological effects of climate change: species adapt, move or die 427
 Climate change presents new selection pressures 427
 The footprint of climate change 428
 Forecasting future changes in distribution 430
 Adaptive responses to climate change 431
 Ecosystem changes under climate change 432
 How many species are threatened with extinction? 434
 Assessment of extinction risk by experts using IUCN and other categories 435

Endangered species: an overview 437
 Concluding remarks 438

19 The taxonomic challenge ahead 439

What are the prospects of the completion of a catalogue of life? 439
 The renewal of taxonomy 440
 Barcoding: its history and potential in taxonomic investigations 442
 Barcoding: a route to the reinvigoration of taxonomy? 445
 The status of taxonomy in an era dominated by molecular biology 446
 Will Earth's species all be named before they become extinct? 447

20 Conservation: from protection to restoration and beyond 449

Ex situ conservation 449
 Seed banks 452
Ex situ conservation: the future 453
 The role of protected areas in countering the threat of extinction 454
 Managing reserves to prevent extinction of species 457
 Restoration ecology 458
 Creative conservation: community translocations 459
 Creative conservation: wildflower mixtures 459
 Plants/seed of native provenance 459

Manipulating and creating populations in an attempt to prevent extinction 460
 Restocking (augmentation, reinforcement) of existing population(s) 460
 Restorations using clonal plants from various sources 461
 Re-establishment (reinstatement) of an extinct population 461
 Founding population(s) in new areas 462
 Mix or match: inbreeding and outbreeding depression 462
 Founding new populations: seed v. plants 463
 Restoration projects: issues and prospects 463
 Species restoration projects: what counts as success? 463
 Recommendations for better restorations 463
 Aims and objectives of conservation: looking back and considering the future 465
 Assisted migration 466
 Major dilemmas with past-orientated conservation models 469
 Setting priorities in conservation 470
 Creative conservation: economic and political considerations 471
 Concluding remarks 472

Glossary 478
