1 Introduction	1
1.1 Structure of this book	3
1.1.1 Introductory sections	4
1.1.2 Approaches to consider when setting up a new animal model	4
1.1.3 Approaches to consider when generating hypotheses	5
1.1.4 Approaches to consider when testing hypotheses	5
1.2 Statistical problems faced by animal researchers	5
1.3 Pitfalls encountered when applying statistics in practice	6
1.3.1 Pitfalls with experimental design	6
1.3.2 Pitfalls with randomisation	9
1.3.3 Pitfalls with statistical analysis	10
1.3.4 Pitfalls when reporting animal experiments	13
1.4 So where does statistics fit in?	15
1.5 The ARRIVE guidelines	15
2 Statistical concepts	18
2.1 Decision-making: the signal-to-noise ratio	18
2.2 Probability distributions	19
2.2.1 The frequency distribution	20
2.2.2 The density distribution	20
2.2.3 The probability distribution	21
2.2.4 The normal distribution	21
2.2.5 The chi-squared distribution	22
2.2.6 The <i>t</i> -distribution	22
2.2.7 The <i>F</i> -distribution	23

2.3	The hypothesis testing procedure	23	3.2.8	Repeatedly measuring the animal	45
2.3.1	The null and alternative hypotheses	23	3.3	Summary of design types	46
2.3.2	The p -value	25	3.3.1	Block designs	46
2.3.3	The significance level	25	3.3.2	Factorial designs	47
2.3.4	Significant stars	26	3.3.3	Dose-response designs	47
2.3.5	Type I and Type II errors	26	3.3.4	Nested designs	47
2.4	Exploratory vs. confirmatory experiments	28	3.3.5	Split-plot designs	48
2.5	The estimation process	29	3.3.6	Repeated measures and dose-escalation designs	48
3	Experimental design	30	3.3.7	Designs applied in practice	48
3.1	Why design experiments?	30	3.4	Block designs	49
3.1.1	Practical reasons	30	3.4.1	Practical reasons to block	49
3.1.2	Statistical reasons: variability, the signal and bias	31	3.4.2	Statistical reasons to block	49
3.2	What does an experimental design involve?	32	3.4.2.1	Variance reduction	49
3.2.1	Variables to be recorded	32	3.4.2.2	Bias reduction	51
3.2.1.1	Types of response	32	3.4.3	How to block	51
3.2.1.2	Reporting responses	34	3.4.4	Complete block designs	53
3.2.1.3	Baseline responses	34	3.4.4.1	Efficiency	53
3.2.1.4	Recording conditions during the experiment	35	3.4.4.2	Randomisation	53
3.2.2	Set of treatments	35	3.4.4.3	Statistical analysis of block designs	54
3.2.3	The experimental unit and the observational unit	36	3.4.5	Incomplete block designs	54
3.2.4	Effects and factors	37	3.4.6	Balanced incomplete block design	55
3.2.4.1	Defining factor level labels	39	3.4.6.1	Efficiency	55
3.2.4.2	Defining the factors in an experimental design	39	3.4.6.2	Randomisation	55
3.2.5	Fixed and random factors	39	3.4.6.3	Statistical analysis	55
3.2.5.1	Fixed factors	40	3.4.7	More than one block: the row-column block design	56
3.2.5.2	Random factors	40	3.4.7.1	Efficiency	56
3.2.5.3	Random or fixed?	41	3.4.7.2	Randomisation	56
3.2.6	Categorical factors and continuous factors	42	3.4.7.3	Statistical analysis	56
3.2.7	Crossed factors and nested factors	42	3.4.8	Row-column block designs based on Latin squares	57
3.2.7.1	Nested factors	42	3.4.8.1	Efficiency	58
3.2.7.2	Crossed factors	43	3.4.8.2	Randomisation	58
3.2.7.3	Partially crossed factors	45	3.4.8.3	Statistical analysis	58
3.2.7.4	Designs containing nested and crossed factors	45	3.4.9	Crossover designs	59
			3.4.9.1	Complete crossover designs	59
			3.4.9.2	Incomplete crossover designs	60
			3.4.9.3	The benefits of crossover designs	61

3.4.9.4	The issues with crossover designs	62	3.6.3.3	Adding an offset to the dose	88
3.4.9.5	Treatment carry-over effects	62	3.7	Nested designs	90
3.5	Factorial design	63	3.7.1	Types of nested design	91
3.5.1	Randomisation	64	3.7.1.1	Single-order nested design	91
3.5.2	Categorical factors and interactions	64	3.7.1.2	Higher-order nested design	91
3.5.3	Small factorial designs	66	3.7.2	Sample size and power	93
3.5.4	Large factorial designs	68	3.7.2.1	Factors that influence sample size	93
3.5.4.1	Strategies when setting up a new animal model	68	3.7.2.2	Calculating sample sizes	95
3.5.4.2	Graphical representation of large factorial designs	70	3.7.2.3	When not to calculate the statistical power	97
3.5.4.3	Hidden replication	70	3.7.3	Higher-order nested designs	99
3.5.4.4	Fractional factorial designs to reduce animal use	72	3.7.3.1	Identifying nested factors	99
3.5.4.5	Two-stage procedure to reduce animal use	75	3.7.3.2	Investigating the sources of variability in higher-order nested designs	101
3.5.5	Factorial designs with continuous factors	77	3.7.3.3	Variance components: estimating the observational unit variability	102
3.5.5.1	Strategies for setting up a new animal model	78	3.7.3.4	Predicting the experimental unit variability	103
3.5.5.2	Drug combination studies	81	3.7.3.5	Investigating alternative nested designs	105
3.5.5.3	Continuous vs. categorical factors	83	3.7.3.6	Pseudo-replication	106
3.5.6	Final thoughts on factorial designs	83	3.8	Repeated measures and dose-escalation designs	110
3.6	Dose-response designs	84	3.8.1	Repeated measures designs	110
3.6.1	The four- and five-parameter logistic curves	84	3.8.1.1	The repeated factor	110
3.6.2	Experimental design considerations	85	3.8.1.2	The core experimental design	112
3.6.2.1	Increasing the number of doses	86	3.8.1.3	Nested repeated measures designs	112
3.6.2.2	Decreasing the number of animals	86	3.8.1.4	More complex repeated measures designs	114
3.6.3	Including the control group	87	3.8.2	Dose-escalation designs	116
3.6.3.1	Analysing a change from the control response	87	3.8.2.1	More complex dose-escalation designs	117
3.6.3.2	Using a dual statistical model	88			

3.9	Split-plot designs	117	5.2.1.3	The predicted mean	137
3.9.1	Animals as whole plots	117	5.2.1.4	The geometric mean	137
3.9.2	Animals as subplots	118	5.2.2	Parametric measures of spread	138
3.10	Experimental designs in practice	119	5.2.2.1	Variance	138
3.11	A good design should result in...	120	5.2.2.2	Standard deviation	138
4	Randomisation	122	5.2.2.3	Standard error of the mean	138
4.1	Practical reasons to randomise	122	5.2.2.4	Confidence intervals	139
4.1.1	Bias reduction	122	5.2.2.5	Coefficient of variation	139
4.1.1.1	Removing unforeseen trends	123	5.2.3	Non-parametric measures of location	139
4.1.1.2	Humans are systematic	123	5.2.4	Non-parametric measures of spread	140
4.1.2	Blinding	124	5.3	Graphical tools	140
4.2	Statistical reasons to randomise	124	5.3.1	Scatterplots	140
4.2.1	Estimating the variability	125	5.3.2	Box-plots	142
4.2.2	Deciding upon the statistical analysis strategy	125	5.3.3	Histograms	143
4.2.2.1	Including interactions in the statistical model	126	5.3.4	Categorised case profiles plot	144
4.2.2.2	Including blocking factors	127	5.3.5	Means with SEMs plot	145
4.2.3	Repeatedly measured responses	127	5.3.5.1	Problems with the means with SEMs plot	145
4.2.3.1	Repeated factors and randomised factors	127	5.3.5.2	Benefits of the means with SEMs plot	151
4.2.3.2	Block and dose-escalation designs	127	5.4	Parametric analysis	151
4.2.3.3	Crossover and dose-escalation designs	128	5.4.1	Parametric assumptions	152
4.2.3.4	Including interactions involving the repeated factor	129	5.4.1.1	Numeric and continuous responses	152
4.3	What to randomise	129	5.4.1.2	Normally distributed residuals	153
4.4	How to randomise	130	5.4.1.3	Homogeneity of variance	155
5	Statistical analysis	132	5.4.1.4	Independence of the responses	158
5.1	Introduction	132	5.4.1.5	Removal of outliers	159
5.1.1	InVivoStat	133	5.4.1.6	Additivity	162
5.1.2	A recommended five-stage parametric analysis procedure	133	5.4.2	The <i>t</i> -test	163
5.2	Summary statistics	135	5.4.2.1	The unpaired <i>t</i> -test	163
5.2.1	Parametric measures of location	135	5.4.2.2	When not to use an unpaired <i>t</i> -test	165
5.2.1.1	The true mean and the sample mean	135	5.4.2.3	The paired <i>t</i> -test	167
5.2.1.2	The observed mean	136	5.4.2.4	Randomisation and the paired <i>t</i> -test	168

5.4.3	Analysis of variance (ANOVA)	168	5.4.6.5	Predicted group means	203
5.4.3.1	One-way ANOVA	169	5.4.6.6	Assumptions for ANCOVA	204
5.4.3.2	Including the positive control	173	5.4.6.7	Strategy for when the independence assumption does not hold	207
5.4.3.3	Two-way ANOVA	174	5.4.6.8	ANCOVA and stratified randomisation	208
5.4.3.4	Two-way vs. one-way ANOVA	176	5.4.6.9	Change from baseline responses	208
5.4.3.5	Dealing with missing factor combinations	177	5.4.7	Regression analysis	211
5.4.4	Repeated measures analysis	179	5.4.8	Multiple comparison procedures	212
5.4.4.1	Categorised case profiles plot	181	5.4.8.1	The risk of finding false positives and false negatives	212
5.4.4.2	Analysis of summary measures	181	5.4.8.2	Choosing the family of tests	214
5.4.4.3	Repeated measures analysis	189	5.4.8.3	Unadjusted tests	215
5.4.4.4	The mixed-model approach vs. the ANOVA-based approach	191	5.4.8.4	Stepwise multiple comparison procedures that control the FDR	218
5.4.4.5	Advantages and disadvantages of the repeated measures analysis	195	5.4.8.5	Simultaneous multiple comparison procedures that control the FWE	218
5.4.5	Predicted means from the parametric analysis	196	5.4.8.6	Stepwise multiple comparison procedures based on group differences that control the FWE	222
5.4.5.1	Least square (predicted) means	196	5.4.8.7	Stepwise-based multiple comparison procedures based on p -values that control the FWE	223
5.4.5.2	Variability of the least square (predicted) means	197	5.4.8.8	The gateway ANOVA approach	224
5.4.5.3	Geometric means and confidence intervals	197	5.4.8.9	Multiple comparison procedures in statistical software packages	227
5.4.5.4	Reliability of the predicted means	198	5.4.8.10	Recommendations	228
5.4.6	Analysis of covariance (ANCOVA)	199	5.5	Other useful analyses	228
5.4.6.1	What is a covariate?	200	5.5.1	Non-parametric analyses	228
5.4.6.2	Best-fit lines and predicted lines	201	5.5.1.1	When to use a	
5.4.6.3	Categorised scatterplot	201			
5.4.6.4	Predictions from ANCOVA	202			

	non-parametric test	229		6.3.3.5 Analysis of designs with missing factor combinations	252
5.5.1.2	Non-parametric tests	230	6.4	Repeated Measures Parametric Analysis module	252
5.5.2	Testing the difference between proportions	231	6.4.1	Analysis procedure	252
5.5.2.1	Analysis procedure	232	6.4.2	Worked example	255
5.5.2.2	Chi-squared test	232	6.4.3	Technical details	255
5.5.2.3	Fisher's exact test	233	6.5	P-Value Adjustment module	258
5.5.3	Survival analysis	234	6.5.1	Analysis procedure	259
5.5.3.1	The survival function	235	6.5.2	Worked example	259
5.5.3.2	Comparing groups	236	6.6	Non-Parametric Analysis module	260
6	Analysis using InVivoStat	238	6.6.1	Analysis procedure	260
6.1	Getting started	238	6.6.2	Worked example	262
6.1.1	Data import	238	6.7	Graphics module	262
6.1.1.1	Single measure format	238	6.7.1	Analysis procedure	262
6.1.1.2	Repeated measures format	239	6.7.2	Example plots	263
6.1.2	Importing a dataset into InVivoStat: Excel import	240	6.8	Power Analysis module	263
6.1.3	Importing a dataset into InVivoStat: text file import	240	6.8.1	Analysis procedure	263
6.1.4	Data management	240	6.8.2	Worked example	265
6.1.5	Running an analysis	240	6.9	Unpaired <i>t</i> -test Analysis module	267
6.1.6	Warning and error messages	241	6.9.1	Analysis procedure	267
6.1.7	Log file	241	6.9.2	Worked example	271
6.1.8	Exporting results	241	6.10	Paired <i>t</i> -test/within-subject Analysis module	272
6.2	Summary Statistics module	241	6.10.1	Analysis procedure	272
6.2.1	Analysis procedure	242	6.10.2	Worked example	276
6.2.2	Worked example	243	6.11	Dose-Response Analysis module	277
6.3	Single Measure Parametric Analysis module	243	6.11.1	Technical details on curve fitting	277
6.3.1	Analysis procedure	243	6.11.2	Fitting logistic curves to data	278
6.3.2	Worked example	245	6.11.3	Analysis of quantitative assays	278
6.3.3	Technical details	248	6.11.4	Analysis procedure	279
6.3.3.1	Analysis of large factorial experiments	248	6.11.5	Worked example: a biological assay	281
6.3.3.2	Analysis of small factorial experiments	248	6.11.6	User-defined equation option	282
6.3.3.3	Analysis of experiments involving blocking factors	249	6.12	Chi-squared Test and Fisher's Exact Test module	282
6.3.3.4	Analysis of crossover trials	251	6.12.1	Analysis procedure	283
			6.12.2	Worked example	284
			6.13	R-Runner module	285
			6.14	Nested Design Analysis module	285

6.14.1	Analysis procedure	286	7	Conclusion	293
6.14.2	Worked example	289			
6.15	Survival Analysis module	289		Glossary	295
6.15.1	Analysis procedure	289		References	297
6.15.2	Worked example	291		Index	303
