Preface	page ix
---------	---------

Chapter 1	Introduction	1
What is a plant?		1
How do plant fragments get into the fossil record?		2
Types of plant fossil		3
Where are plant fossils found?		7
Bias in the fossil record		10
Why do we study plant fossils?		13
Recommended reading		13

Chapter 2	Highlights of palaeobotanical study	14
The beginnings of palaeobotany		14
The importance of coal		16
Anatomical studies		21
Coal balls		21
Coal petrology and palynology		23
The <i>Glossopteris</i> flora and continental drift		25
Early land plants		28
The age of cycads		30
Flowering plants		33
The future for palaeobotany		36
Recommended reading		37

Chapter 3	Studying plant fossils	38
Morphology of adpressions		38
Macrophotography		38
Transfers		39
Cuticles and epidermal structures		40
Extracting <i>in situ</i> pollen and spores		42
Dispersed pollen and spores		42
Three-dimensionally preserved plant fossils		42
Prepared casts		42
Tomography		44
Sectioning anatomically preserved fossils		45
Mathematical techniques		46
Naming plant fossils		47
Reconstructing whole fossil plants		49
Phylogenetic analysis		50
Biostratigraphy and palaeobiogeography		50
Curation		53
Site conservation		53
Recommended reading		55

Chapter 4	Early land plants	56
	Alternating generations	56
	Adapting to life on land	58
	Cryptospores and the earliest land plants	60
	The first vascular plants	61
	The Rhynie Chert flora	62
	Zosterophylls	65
	Trimerophytes	66
	Progymnosperms	69
	Recommended reading	71
Chapter 5	Lycophytes	73
	The earliest herbaceous lycophytes	73
	The beginnings of modern herbaceous lycophytes	78
	Increase in size and arborescence	80
	Cuticles and paper coal	89
	Rooting structures	89
	Reproduction	91
	Lycophyte palaeoecology in the Coal Measures swamps	94
	After the giants	96
	Recommended reading	98
Chapter 6	Sphenophytes	99
	Origin and systematic position of the sphenophytes	99
	Pseudoborniales	101
	Sphenophyllales	102
	Archaeocalamitaceae	105
	Calamostachyaceae	105
	Gondwana sphenophytes	109
	Modern sphenophytes	110
	Recommended reading	114
Chapter 7	Ferns	115
	The first ferns	118
	Modern ferns	119
	Marattiales	119
	Other Late Palaeozoic ferns	123
	Ophioglossales	123
	Filicalean ferns	124
	Osmundaceae	125
	Schizaeaceae	129
	Gleicheniaceae	131
	Matoniaceae	133
	Dipteridaceae	133
	Dicksoniaceae and Cyatheaceae	135

Polypodiaceous ferns	137
Tempskya	140
Heterosporous ferns	140
Recommended reading	144

Chapter 8 | Early gymnosperms 145

What are ovules and seeds?	145
Gymnosperm reproduction	146
What plants did gymnosperms evolve from?	148
The pteridosperms	148
Lyginopteridales	149
Medullosales	153
Callistophytales	156
Peltasperms	159
Glossopterids	160
Cordaitea	162
Recommended reading	166

Chapter 9 | Modern gymnosperms 167

Early conifers	167
Modern conifers	173
Ginkgoales	175
Cycads	176
Bennettitales	182
Caytoniales	184
Other gymnosperm groups	185
Gnetales	185
Recommended reading	187

Chapter 10 | Angiosperms 188

What makes an angiosperm?	188
Wood	190
Ancestors of the angiosperms	191
The earliest angiosperms	194
Cretaceous angiosperms	196
Wind-pollinated angiosperms	202
The rise of the monocotyledons	202
Cenozoic angiosperms	205
Recommended reading	212

Chapter 11 | The history of land vegetation 213

Evolutionary floras	213
Rhyniophytic Evolutionary Flora	213
Eophytic Evolutionary Flora	214
Palaeophytic Evolutionary Flora	214
Mesophytic Evolutionary Flora	220

Cenophytic Evolutionary Flora	225
Plants – the great survivors	230
Recommended reading	232
References	233
Index	243

Colour plates can be found between pages 134 and 135
