|---------------------------------------------------------------------------------|-------------|
| <b>Preface</b>                                                                  | <b>xiii</b> |
| <b>Acknowledgements</b>                                                         | <b>xvii</b> |
| <b>1 Introduction</b>                                                           | <b>1</b>    |
| 1.1 What is a Biomarker?, 1                                                     |             |
| 1.2 Biomarkers Versus Surrogate Endpoints, 2                                    |             |
| 1.3 Organization of This Book, 3                                                |             |
| <b>2 Designing Biomarker Studies</b>                                            | <b>5</b>    |
| 2.1 Introduction, 5                                                             |             |
| 2.2 Designing the Study, 6                                                      |             |
| 2.2.1 The Exposure–Disease Association, 6                                       |             |
| 2.2.2 Cross-sectional Studies, 7                                                |             |
| 2.2.3 Case–Control Studies, 7                                                   |             |
| 2.2.4 Retrospective Cohort Studies, 9                                           |             |
| 2.2.5 Prospective Cohort Studies, 9                                             |             |
| 2.2.6 Observational Studies, 10                                                 |             |
| 2.2.7 Randomized Controlled Trials, 11                                          |             |
| 2.3 Designing the Analysis, 13                                                  |             |
| 2.3.1 Choosing the Appropriate Measure of Association, 15                       |             |
| 2.3.1.1 Odds Ratio versus Risk Ratio, 15                                        |             |
| 2.3.1.2 Consequences of Not Choosing the Appropriate Measure of Association, 16 |             |

|          |                                                                                                |           |
|----------|------------------------------------------------------------------------------------------------|-----------|
| 3.2.2    | Choosing the Appropriate Statistical Analysis,                                                 | 16        |
| 3.2.3    | Choosing the Appropriate Sample Size,                                                          | 17        |
| 3.4      | Presenting Statistical Results,                                                                | 18        |
|          | Problems,                                                                                      | 20        |
| <b>3</b> | <b>Elementary Statistical Methods for Analyzing Biomarker Data</b>                             | <b>21</b> |
| 3.1      | Introduction,                                                                                  | 21        |
| 3.2      | Graphical and Tabular Summaries,                                                               | 21        |
| 3.3      | Descriptive Statistics,                                                                        | 26        |
| 3.4      | Describing the Shape of Distributions,                                                         | 31        |
| 3.5      | Sampling Distributions,                                                                        | 33        |
| 3.6      | Introduction to Statistical Inference,                                                         | 34        |
| 3.6.1    | Point Estimation and Confidence Interval Estimation,                                           | 34        |
| 3.6.2    | Hypothesis Testing,                                                                            | 38        |
| 3.7      | Comparing Means Across Groups,                                                                 | 43        |
| 3.7.1    | Two Group Comparisons,                                                                         | 44        |
| 3.7.2    | Multiple-Group Comparisons,                                                                    | 45        |
| 3.8      | Correlation Analysis,                                                                          | 50        |
| 3.9      | Regression Analysis,                                                                           | 52        |
| 3.9.1    | Simple Linear Regression,                                                                      | 52        |
| 3.9.2    | Multiple Regression,                                                                           | 55        |
| 3.9.3    | Analysis of Covariance,                                                                        | 58        |
| 3.10     | Analyzing Cross-Classified Data,                                                               | 61        |
| 3.10.1   | Testing for Independence,                                                                      | 61        |
| 3.10.2   | Comparison of Proportions,                                                                     | 65        |
|          | Problems,                                                                                      | 69        |
| <b>4</b> | <b>Frequently Encountered Challenges in Analyzing Biomarker Data and How to Deal with Them</b> | <b>72</b> |
| 4.1      | Introduction,                                                                                  | 72        |
| 4.2      | Non-Normally Distributed Data,                                                                 | 73        |
| 4.2.1    | The Effects of Non-Normality,                                                                  | 73        |
| 4.2.2    | Testing Distributional Assumptions,                                                            | 74        |
| 4.2.2.1  | Graphical Methods for Assessing Normality,                                                     | 74        |
| 4.2.2.2  | Measures of Skewness and Kurtosis,                                                             | 81        |
| 4.2.2.3  | Formal Hypothesis Tests of the Normality Assumption,                                           | 83        |
| 4.2.3    | Remedial Measures for Violation of a Distributional Assumption,                                | 86        |
| 4.2.3.1  | Choosing a Transformation,                                                                     | 86        |
| 4.2.3.2  | Using a Robust Statistical Procedure,                                                          | 92        |
| 4.2.3.3  | Distribution-Free Alternatives,                                                                | 93        |
| 4.3      | Heterogeneity of Variance,                                                                     | 113       |
| 4.3.1    | The Effects of Heterogeneity,                                                                  | 113       |

- 4.3.2 The Importance of Heterogeneity in the Comparison of Means, 113
  - 4.3.2.1 Comparisons of Two Groups, 113
  - 4.3.2.2 Comparisons of More Than Two Groups, 116
  - 4.3.2.3 Multiple Comparisons, 118
- 4.4 Dependent Groups, 122
  - 4.4.1 The Consequences of Ignoring Dependence Among Groups, 122
  - 4.4.2 Comparing Two Dependent Means, 124
    - 4.4.2.1 Paired *t*-test, 124
    - 4.4.2.2 Wilcoxon Signed Ranks Test, 127
    - 4.4.2.3 Sign Test, 128
  - 4.4.3 Tests of Dependent Proportions, 134
    - 4.4.3.1 McNemar's Test, 134
    - 4.4.3.2 Cochran's Q test, 138
    - 4.4.3.3 Sample Size and Power Considerations, 142
- 4.5 Correlated Outcomes, 144
  - 4.5.1 Choosing the Appropriate Measure of Association, 144
    - 4.5.1.1 Spearman's rho, 144
    - 4.5.1.2 Kendall's tau-b, 146
  - 4.5.2 Recommended Methods of Statistical Analysis for Correlation Coefficients, 148
  - 4.5.3 Recommended Methods for Interpreting Correlation Coefficient Results, 156
  - 4.5.4 Sample Size Issues in Correlation Analysis, 157
  - 4.5.5 Comparison of Correlation Coefficients, 171
    - 4.5.5.1 Comparison of Independent Correlation Coefficients, 172
    - 4.5.5.2 Comparison of Dependent Correlation Coefficients, 174
  - 4.5.6 Sample Size Issues When Comparing Two Correlation Coefficients, 181
    - 4.5.6.1 Sample Size Issues When Comparing Independent Correlation Coefficients, 181
    - 4.5.6.2 Sample Size Issues When Comparing Dependent Correlation Coefficients, 183
- 4.6 Clustered Data, 184
