

Contents at a Glance

.....

Introduction	1
Chapter 1: Exploring the Living World	5
Chapter 2: The Chemistry of Life	23
Chapter 3: The Living Cell	39
Chapter 4: Energy and Organisms.....	59
Chapter 5: Reproducing Cells	75
Chapter 6: DNA and Proteins: Life Partners.....	97
Chapter 7: Ecosystems and Populations.....	115
Chapter 8: Understanding Genetics	133
Chapter 9: Biological Evolution	149
Chapter 10: Ten Great Biology Discoveries	161
Index.....	167

Table of Contents

Introduction	1
About This Book	1
Conventions Used in This Book	2
Foolish Assumptions	2
Icons Used in This Book	2
Where to Go from Here	3
 Chapter 1: Exploring the Living World.	5
Living Things: Why Biologists Study Them, What Defines Them	5
Meet Your Neighbors: Looking at Life on Earth	8
Unsung heroes: Bacteria	8
Bacteria impersonators: Archaeans	9
A taste of the familiar: Eukaryotes	9
Classifying Living Things	11
Organizing Life into Smaller and Smaller Groups: Taxonomy	12
Biodiversity: Our Differences Make Us Stronger	14
Valuing biodiversity	15
Surveying the threats posed by human actions	16
Exploring the extinction of species	17
Keystone species	17
Indicator species	18
Protecting biodiversity	18
Making Sense of the World through Observations	19
 Chapter 2: The Chemistry of Life.	23
Exploring Why Matter Matters	23
The Differences among Atoms, Elements, and Isotopes	24
Tiny, mighty atoms	24
Elements of elements	25
I so dig isotopes	25
Molecules, Compounds, and Bonds	26
Acids and Bases	27
“Ph”iguring out the pH scale	27
Buffing up on buffers	28

Carbon-Based Molecules: The Basis for All Life	28
Providing energy: Carbohydrates	29
Making and breaking sugars	31
Converting glucose for storage purposes	31
Making life possible: Proteins	32
The building blocks of proteins	32
The main functions of proteins	33
Drawing the cellular road map: Nucleic acids	34
Deoxyribonucleic acid (DNA)	34
Ribonucleic acid (RNA)	36
Supplying structure, energy, and more: Lipids	36
Chapter 3: The Living Cell	39
An Overview of Cells	39
Peeking at Prokaryotic Cells	41
Examining the Structure of Eukaryotic Cells	42
Cells and the Organelles	44
Holding it all together: The plasma membrane	44
Deciphering the fluid-mosaic model	45
Transporting materials through the plasma membrane	47
Supporting the cell: The cytoskeleton	48
The nucleus controls the show	49
Creating proteins: Ribosomes	50
Serving as the cell's factory: The endoplasmic reticulum	50
Preparing products for distribution: The Golgi apparatus	51
Cleaning up the trash: Lysosomes	51
Destroying toxins: Peroxisomes	52
Providing energy, ATP-style: Mitochondria	52
Converting energy: Chloroplasts	53
Presenting Enzymes, the Jump-Starters	53
Staying the same	54
... while lowering activation energy	55
Getting some help from cofactors and coenzymes ...	56
Controlling enzymes through feedback inhibition	56
Chapter 4: Energy and Organisms	59
What's Energy Got to Do with It?	59
Looking at the rules regarding energy	60
Metabolizing molecules	61
Transferring energy with ATP	61

Consuming food for matter and energy	62
Finding food versus producing your own	63
Building Cells through Photosynthesis	65
Transforming energy from the ultimate energy source	66
Putting matter and energy together	67
Cellular Respiration: Using Oxygen to Break Down Food	67
Breaking down food	69
Transferring energy to ATP	70
Energy and Your Body	72
Chapter 5: Reproducing Cells	75
Reproduction: Keep On Keepin' On	75
How DNA Replication Works	77
Cell Division: Out with the Old, In with the New	80
Interphase: Getting organized	82
Mitosis: One for you, and one for you	84
The four phases of mitosis	84
Daughter nuclei go their own way: Cytokinesis	85
Meiosis: It's all about sex, baby	87
Meiosis I	90
Meiosis II	92
How Sexual Reproduction Creates Genetic Variation	92
Mutations	93
Crossing-over	93
Independent assortment	93
Fertilization	94
Nondisjunction	94
Pink and blue chromosomes	95
This Budding's for You: Asexual Reproduction	96
Chapter 6: DNA and Proteins: Life Partners	97
Proteins Make Traits Happen, and DNA Makes the Proteins	97
Moving from DNA to RNA to Protein	98
Rewriting DNA's message: Transcription	99
Finding out what else is involved	102
Walking through the process	102
Putting on the finishing touches: RNA processing	103
Converting the code to the right language: Translation	104
Making sense of codons and anticodons	106
Breaking down the translation process	107

Mistakes Happen: The Consequences of Mutation	109
Giving Cells Some Control: Gene Regulation	111
Adapting to environmental changes	112
Becoming specialists through differentiation	112

Chapter 7: Ecosystems and Populations115

Ecosystems Bring It All Together	115
Biomes: Communities of life	117
Interactions among species	118
Studying Populations	118
The basics of population ecology	119
Population density	119
Dispersion	119
Population dynamics	120
Survivorship	120
How populations grow	122
Factors affecting population growth	122
Reaching carrying capacity	123
Taking a closer look at the human population	123
Moving Energy and Matter around within Ecosystems ...	125
Going with the (energy) flow	126
Energy principles	126
The energy pyramid	127
Cycling matter through ecosystems	128
The hydrologic cycle	129
The carbon cycle	129
The phosphorus cycle	130
The nitrogen cycle	131

Chapter 8: Understanding Genetics133

Heritable Traits and the Factors Affecting Them	133
Mendel's Laws of Inheritance	134
Pure breeding the parentals	135
Analyzing the F1 and F2 generations	135
Reviewing Mendel's results	136
Defining Key Genetics Terms	137
Bearing Genetic Crosses	138
Genetic Engineering	140
Understanding what's involved	
in DNA technology	141
Cutting DNA with restriction enzymes	141
Combining DNA from different sources	142

Genetically modified organisms	143
Why GMOs are beneficial	143
Why GMOs cause concern	144
Reading a gene with DNA sequencing	146
Mapping the genes of humanity	147

Chapter 9: Biological Evolution149

What People Used to Believe	149
Charles Darwin: Challenging Age-Old Beliefs	150
Owing it all to the birds	151
Darwin's theory of biological evolution	152
The idea of natural selection	152
Natural selection versus	
artificial selection	152
Four types of natural selection	154
Evidence of Biological Evolution	155
Biochemistry	155
Comparative anatomy	156
Geographic distribution of species	157
Molecular biology	157
Fossil record	158
Observable data	158
Radioisotope dating	159
Evolution versus Creationism	159

Chapter 10: Ten Great Biology Discoveries161

Seeing the Unseen	161
Creating the First Antibiotic	161
Protecting People from Smallpox	162
Defining DNA Structure	162
Finding and Fighting Defective Genes	162
Discovering Modern Genetic Principles	163
Evolving the Theory of Natural Selection	163
Formulating Cell Theory	164
Moving Energy through the Krebs Cycle	164
Amplifying DNA with PCR	164

Index167
