Preface to Second Edition	xix
Preface to First Edition	xxi
Acknowledgments	xxiii
1. Quantitative Instrumental Measurements	1
1.1. Introduction	1
1.2. Optical Measurements	2
1.2.1. UV-Visible Absorbance	3
1.2.2. Turbidimetry (Light-Scattering)	5
1.2.3. Fluorescence	5
1.2.4. Chemiluminescence and Bioluminescence	7
1.3. Electrochemical Measurements	8
1.3.1. Potentiometry	10
1.3.2. Amperometry	10
1.3.3. Impedimetry	11
1.4. Radiochemical Measurements	12
1.4.1. Scintillation Counting	12
1.4.2. Geiger Counting	12
1.5. Surface Plasmon Resonance	13
1.6. Calorimetry	14
1.6.1. Differential Scanning Calorimetry (DSC)	15
1.6.2. Isothermal Titration Calorimetry (ITC)	16
1.7. Automation: Microplates, Multiwell Liquid Dispensers and Microplate Readers	16
1.8. Calibration of Instrumental Measurements	18
1.8.1. External Standards	18
1.8.2. Internal Standards	19
1.8.3. Standard Additions	20

1.9. Quantitative and Semi-Quantitative Measurements	21
1.9.1. Exact Concentration	21
1.9.2. Positive or Negative Result	21
Suggested Reading	22
Problems	22
2. Spectroscopic Methods for the Quantitation of Classes of Biomolecules	23
2.1. Introduction	23
2.2. Total Protein	24
2.2.1. Lowry Method	24
2.2.2. Smith (BCA) Method	24
2.2.3. Bradford Method	26
2.2.4. Ninhydrin-Based Assay	27
2.2.5. Other Protein Quantitation Methods	28
2.3. Total DNA	31
2.3.1. Diaminobenzoic Acid (DABA) Method	32
2.3.2. Diphenylamine (DPA) Method	32
2.3.3. Other Fluorimetric Methods	33
2.4. Total RNA	34
2.5. Total Carbohydrate	35
2.5.1. Ferricyanide Method	35
2.5.2. Phenol-Sulfuric Acid Method	36
2.5.3. 2-Aminothiophenol Method	36
2.5.4. Purpald Assay for Bacterial Polysaccharides	37
2.6. Free Fatty Acids	37
References	38
Problems	39
3. Enzymes	41
3.1. Introduction	41
3.2. Enzyme Nomenclature	42
3.3. Enzyme Commission Numbers	43
3.4. Enzymes in Bioanalytical Chemistry	45
3.5. Enzyme Kinetics	46
3.5.1. Simple One-Substrate Enzyme Kinetics	48
3.5.2. Experimental Determination of Michaelis-Menten Parameters	50
3.5.2.1. Eadie-Hofstee Method	50
3.5.2.2. Hanes Method	50

3.5.2.3. Lineweaver-Burk Method	51
3.5.2.4. Cornish-Bowden-Eisenthal Method	52
3.5.3. Comparison of Methods for the Determination of K_M Values	52
3.5.4. One-Substrate, Two-Product Enzyme Kinetics	54
3.5.5. Two-Substrate Enzyme Kinetics	54
3.5.6. Examples of Enzyme-Catalyzed Reactions and their Treatment	56
3.5.7. Curve Fitting for Enzyme Kinetic Data	57
3.6. Enzyme Activators	58
3.7. Enzyme Inhibitors	59
3.7.1. Competitive Inhibition	60
3.7.2. Noncompetitive Inhibition	60
3.7.3. Uncompetitive Inhibition	62
3.8. Enzyme Units and Concentrations	62
Suggested Reading	64
References	64
Problems	64

4. Quantitation of Enzymes and Their Substrates

67

4.1. Introduction	67
4.2. Substrate Depletion or Product Accumulation	68
4.3. Direct and Coupled Measurements	69
4.4. Classification of Methods	71
4.5. Instrumental Methods	73
4.5.1. Optical Detection	73
4.5.1.1. Absorbance	73
4.5.1.2. Fluorescence	75
4.5.1.3. Luminescence	77
4.5.1.4. Nephelometry	79
4.5.2. Electrochemical Detection	79
4.5.2.1. Amperometry	79
4.5.2.2. Potentiometry	80
4.5.2.3. Conductimetry	80
4.5.3. Other Detection Methods	81
4.5.3.1. Radiochemical	81
4.5.3.2. Manometry	81
4.5.3.3. Calorimetry	82
4.6. High-Throughput Assays for Enzymes and Inhibitors	82

4.7. Assays for Enzymatic Reporter Gene Products	84
4.8. Practical Considerations for Enzymatic Assays	85
Suggested Reading	86
References	86
Problems	87

5. Immobilized Enzymes

90

5.1. Introduction	90
5.2. Immobilization Methods	90
5.2.1. Nonpolymerizing Covalent Immobilization	91
5.2.1.1. <i>Controlled-Pore Glass</i>	92
5.2.1.2. <i>Polysaccharides</i>	93
5.2.1.3. <i>Polyacrylamide</i>	95
5.2.1.4. <i>Acidic Supports</i>	95
5.2.1.5. <i>Anhydride Groups</i>	96
5.2.1.6. <i>Thiol Groups</i>	97
5.2.2. Crosslinking with Bifunctional Reagents	97
5.2.3. Adsorption	98
5.2.4. Entrapment	99
5.2.5. Microencapsulation	100
5.3. Properties of Immobilized Enzymes	101
5.4. Immobilized Enzyme Reactors	107
5.5. Theoretical Treatment of Packed-Bed Enzyme Reactors	109
Suggested Reading	113
References	113
Problems	114

6. Antibodies

117

6.1. Introduction	117
6.2. Structural and Functional Properties of Antibodies	118
6.3. Polyclonal and Monoclonal Antibodies	121
6.4. Antibody-Antigen Interactions	122
6.5. Analytical Applications of Secondary Antibody-Antigen Interactions	124
6.5.1. Agglutination Reactions	124
6.5.2. Precipitation Reactions	126
Suggested Reading	129
References	129
Problems	129

7. Quantitative Immunoassays with Labels 131

7.1. Introduction	131
7.2. Labeling Reactions	132
7.3. Heterogeneous Immunoassays	134
7.3.1. Labeled-Antibody Methods	136
7.3.2. Labeled-Ligand Assays	136
7.3.3. Radioisotopes	139
7.3.4. Fluorophores	139
7.3.4.1. Indirect Fluorescence	140
7.3.4.2. Competitive Fluorescence	140
7.3.4.3. Sandwich Fluorescence	140
7.3.4.4. Fluorescence Excitation Transfer	140
7.3.4.5. Time-Resolved Fluorescence	141
7.3.5. Quantum Dots	142
7.3.6. Chemiluminescent Labels	143
7.3.7. Enzyme Labels	145
7.3.8. Lateral Flow Immunoassay	148
7.4. Homogeneous Immunoassays	149
7.4.1. Fluorescent Labels	149
7.4.1.1. Enhancement Fluorescence	149
7.4.1.2. Direct Quenching Fluorescence	150
7.4.1.3. Indirect Quenching Fluorescence	150
7.4.1.4. Fluorescence Polarization Immunoassay	151
7.4.1.5. Fluorescence Excitation Transfer	151
7.4.2. Enzyme Labels	152
7.4.2.1. Enzyme-Multiplied Immunoassay Technique	152
7.4.2.2. Substrate-Labelled Fluorescein Immunoassay	153
7.4.2.3. Apoenzyme Reactivation Immunoassay	153
7.4.2.4. Cloned Enzyme Donor Immunoassay	154
7.4.2.5. Enzyme Inhibitory Homogeneous Immunoassay	154
7.5. Evaluation of New Immunoassay Methods	155
Suggested Reading	160
References	160
Problems	161

8. Biosensors 166

8.1. Introduction	166
8.2. Biosensor Diversity and Classification	169
8.3. Recognition Agents	171

8.3.1.	Natural Recognition Agents	171
8.3.2.	Artificial Recognition Agents	172
8.4.	Response of Enzyme-Based Biosensors	175
8.5.	Examples of Biosensor Configurations	178
8.5.1.	Ferrocene-Mediated Amperometric Glucose Sensor	178
8.5.2.	Potentiometric Biosensor for Phenyl Acetate	180
8.5.3.	Evanescence-Wave Fluorescence Biosensor for Bungarotoxin	181
8.5.4.	Optical Biosensor for Glucose Based on Fluorescence Resonance Energy Transfer	183
8.5.5.	Piezoelectric Sensor for Nucleic Acid Detection	184
8.5.6.	Enzyme Thermistors	186
8.5.7.	Fluorescence Sensor for Nitroaromatic Explosives Based on a Molecularly Imprinted Polymer	187
8.5.8.	Immunosensor Microwell Arrays from Gold Compact Disks	188
8.5.9.	Nanoparticle-Enhanced Detection of Thrombin by SPR	190
8.5.10.	Environmental BOD and Toxicity Biosensors Based on Viable Cells	192
8.5.11.	Detection of Viruses using a Surface Acoustic Wave (SAW) Biosensor	193
8.5.12.	MEMS Microcantilever Biosensor for Virus Detection	196
8.5.13.	DNA Microarrays	198
8.6.	Evaluation of Biosensor Performance	201
8.7.	<i>In Vivo</i> Applications of Biosensors	202
8.7.1.	Biocompatible Materials	203
8.7.2.	Physiological Environment of the Human Body	203
8.7.3.	The Artificial Pancreas	205
8.7.4.	An Enzymatic Fuel Cell as a Component of an Implanted Biosensing System	205
8.7.5.	Other Examples of Implantable Biosensors	206
	Suggested Reading	207
	References	207
	Problems	209

9. Directed Evolution for the Design of Macromolecular Reagents 210

9.1.	Introduction	210
9.2.	Rational Design and Directed Evolution	211
9.3.	Generation of Genetic Diversity	214
9.3.1.	Polymerase Chain Reaction and Error-Prone PCR	215
9.3.2.	DNA Shuffling	217

9.4. Linking Genotype and Phenotype	217
9.4.1. Cell Expression and Cell Surface Display (<i>In vivo</i>)	218
9.4.2. Phage Display (<i>In vivo</i>)	218
9.4.3. Ribosome Display (<i>In vitro</i>)	219
9.4.4. mRNA-Peptide Fusion (<i>In vitro</i>)	220
9.4.5. Microcompartmentalization (<i>In vitro</i>)	220
9.5. Identification and Selection of Successful Variants	221
9.5.1. Identification of Successful Variants Based on Binding Properties	222
9.5.2. Identification of Successful Variants Based on Catalytic Activity	222
9.6. Examples of Directed Evolution Experiments	224
9.6.1. Directed Evolution of Galactose Oxidase	224
9.6.2. α -Hemolysin Evolution	225
Suggested Reading	226
References	226
Problems	227

10. Image-Based Bioanalysis

229

10.1. Introduction	229
10.2. Magnification and Resolution	230
10.3. Optical Microscopy	231
10.3.1. The Compound Light Microscope	231
10.3.2. The Confocal Microscope	231
10.3.3. Sample Preparation	232
10.3.4. General and Selective Stains	233
10.3.5. Fluorescence <i>In situ</i> Hybridization	234
10.3.6. Green Fluorescent Protein and its Analogues	234
10.4. Electron Microscopy	234
10.4.1. Principles and Instrumentation	234
10.4.2. Sample Preparation	235
10.4.3. Transmission Electron Microscopy (TEM)	236
10.4.4. Scanning Electron Microscopy (SEM)	236
10.5. Scanning Tunneling Microscopy	237
10.5.1. Principles and Instrumentation	237
10.5.2. Biological Applications	237
10.6. Atomic Force Microscopy (AFM)	237
10.6.1. Cantilevers and Operational Modes	237
10.6.2. Samples and Substrates	239

10.6.3. Biological Applications	239
10.6.4. Four-Dimensional (4D) Scanning	240
10.7. Scanning Electrochemical Microscopy (SECM)	240
10.7.1. Principles and Instrumentation	240
10.7.2. Samples and Substrates	241
10.7.3. Biological Applications	241
Suggested Reading	242
References	242
Problems	243

11. Principles of Electrophoresis 244

11.1. Introduction	244
11.2. Electrophoretic Support Media	248
11.2.1. Paper	248
11.2.2. Starch Gels	249
11.2.3. Polyacrylamide Gels	250
11.2.4. Agarose Gels	254
11.2.5. Polyacrylamide-Agarose Gels	254
11.3. Effect of Experimental Conditions Onelectrophoretic Separations	254
11.4. Electric Field Strength Gradients	255
11.5. Pulsed Field Gel Electrophoresis (PFGE)	256
11.6. Detection of Proteins and Nucleic Acids After Electrophoretic Separation	258
11.6.1. Stains and Dyes	258
11.6.2. Detection of Enzymes by Substrate Staining	260
11.6.3. The Southern Blot	260
11.6.4. The Northern Blot	262
11.6.5. The Western Blot	262
11.6.6. Detection of DNA Fragments on Membranes with DNA Probes	263
Suggested Reading	265
References	266
Problems	266

12. Applications of Zone Electrophoresis 268

12.1. Introduction	268
12.2. Determination of Protein Net Charge and Molecular Weight Using PAGE	268
12.3. Determination of Protein Subunit Composition and Subunit Molecular Weights	270

12.4. Molecular Weight of DNA by Agarose Gel Electrophoresis	272
12.5. Identification of Isoenzymes	273
12.6. Diagnosis of Genetic (Inherited) Disorders	274
12.7. DNA Fingerprinting and Restriction Fragment Length Polymorphism	275
12.8. DNA Sequencing with the Maxam-Gilbert Method	279
12.9. Immunoelectrophoresis	282
Suggested Reading	287
References	287
Problems	288

13. Isoelectric Focusing and 2D Electrophoresis **290**

13.1. Introduction	290
13.2. Carrier Ampholytes	291
13.3. Modern IEF with Carrier Ampholytes	293
13.4. Immobilized pH Gradients (IPGs)	296
13.5. Two-Dimensional Electrophoresis	299
13.6. Difference Gel Electrophoresis (DIGE)	301
Suggested Reading	303
References	303
Problems	304

14. Capillary Electrophoresis **306**

14.1. Introduction	306
14.2. Electroosmosis	307
14.3. Elution of Sample Components	308
14.4. Sample Introduction	309
14.5. Detectors for Capillary Electrophoresis	310
14.5.1. Laser-Induced Fluorescence Detection	311
14.5.2. Mass Spectrometric Detection	313
14.5.3. Amperometric Detection	315
14.5.4. Radiochemical Detection	318
14.6. Capillary Polyacrylamide Gel Electrophoresis (C-PAGE)	319
14.7. Capillary Isoelectric Focusing (CIEF)	321
Suggested Reading	322
References	323
Problems	323

15. Centrifugation Methods **325**

15.1. Introduction	325
15.2. Sedimentation and Relative Centrifugal g Force	325

15.3. Centrifugal Forces in Different Rotor Types	327
15.3.1. Swinging-Bucket Rotors	327
15.3.2. Fixed-Angle Rotors	328
15.3.3. Vertical Rotors	328
15.4. Clearing Factor (K)	329
15.5. Density Gradients	330
15.5.1. Materials Used to Generate a Gradient	331
15.5.2. Constructing Pre-Formed and Self-Generated Gradients	331
15.5.3. Redistribution of the Gradient in Fixed-Angle and Vertical Rotors	333
15.6. Types of Centrifugation Techniques	333
15.6.1. Differential Centrifugation	334
15.6.2. Rate-Zonal Centrifugation	334
15.6.3. Isopycnic Centrifugation	336
15.7. Harvesting Samples	336
15.8. Analytical Ultracentrifugation	336
15.8.1. Instrumentation	337
15.8.2. Sedimentation Velocity Analysis	338
15.8.3. Sedimentation Equilibrium Analysis	341
15.9. Selected Examples	342
15.9.1. Analytical Ultracentrifugation for Quaternary Structure Elucidation	342
15.9.2. Isolation of Retroviruses by Self-Generated Gradients	343
15.9.3. Isolation of Lipoproteins from Human Plasma	344
15.9.4. Centrifugal Microfluidic Analysis	344
Suggested Reading	346
References	346
Problems	347

16. Chromatography of Biomolecules

349

16.1. Introduction	349
16.2. Units and Definitions	350
16.3. Plate Theory of Chromatography	350
16.4. Rate Theory of Chromatography	351
16.5. Size Exclusion (Gel Filtration) Chromatography	353
16.6. Stationary Phases For Size Exclusion Chromatography	358
16.6.1. Particulate Gels	358
16.6.2. Monolithic Stationary Phases	360

16.7. Affinity Chromatography	360
16.7.1. Immobilization of Affinity Ligands	362
16.7.2. Elution Methods	364
16.7.3. Determination of Association Constants by High Performance Affinity Chromatography	364
16.8. Ion-exchange Chromatography	368
16.8.1. Retention Model for Ion-Exchange Chromatography of Polyelectrolytes	369
16.8.2. Further Advances in Ion-Exchange Chromatography	374
Suggested Reading	374
References	374
Problems	375

17. Mass Spectrometry of Biomolecules 377

17.1. Introduction	377
17.2. Basic Description of the Instrumentation	379
17.2.1. Soft Ionization Sources	379
17.2.1.1. Fast Atom/Ion Bombardment (FAB)	380
17.2.1.2. Electrospray Ionization (ESI)	380
17.2.1.3. Matrix-Assisted Laser Desorption/Ionization (MALDI)	381
17.2.2. Mass Analyzers	382
17.2.3. Detectors	385
17.3. Interpretation of Mass Spectra	386
17.4. Biomolecule Molecular Weight Determination	388
17.5. Protein Identification	392
17.6. Protein-Peptide Sequencing	393
17.7. Nucleic Acid Applications	397
17.8. Bacterial Mass Spectrometry	398
17.9. Mass Spectrometry Imaging	399
Suggested Reading	401
References	401
Problems	402

18. Micro-TAS, Lab-on-a-Chip, and Microarray Devices 404

18.1. Introduction	404
18.2. Device Fabrication Materials and Methods	405
18.3. Microfluidics	405
18.3.1. Fluid Transport	405

18.3.2. Valves and Reservoirs	406
18.3.3. Mixing and Sample Separation	406
18.4. Detectors	407
18.5. Examples of Bioanalytical Devices	407
18.5.1. DNA Separation Using a Nanofence Array Microfluidic Device	408
18.5.2. Two Dimensional Electrophoresis on a Microfluidic Chip	409
18.5.3. Microfluidic Antibody Capture for Single-Cell Proteomics	410
18.5.4. Multiplexed PCR Amplification and DNA Detection on a Microfluidic Chip	410
18.5.5. Silicone Protein Separation Chip Based on a Grafted Ion-Exchange Polymer	411
18.5.6. Circular, Biofunctionalized PEG Microchannels for Cell Adhesion Studies	411
Suggested Reading	412
References	412
Problems	413

19. Validation of New Bioanalytical Methods **414**

19.1. Introduction	414
19.2. Precision and Accuracy	415
19.3. Mean and Variance	416
19.4. Relative Standard Deviation and Other Precision Estimators	417
19.4.1. Distribution of Errors and Confidence Limits	418
19.4.2. Linear Regression and Calibration	419
19.4.3. Precision Profiles	420
19.4.4. Limit of Quantitation and Detection	421
19.4.5. Linearizing Sigmoidal Curves (Four-Parameter Log-Logit Model)	422
19.4.6. Effective Dose Method	423
19.5. Estimation of Accuracy	424
19.5.1. Standardization	424
19.5.2. Matrix Effects	425
19.5.2.1. Recovery	425
19.5.2.2. Parallelism	426
19.5.3. Interferences	426
19.6. Qualitative (Screening) Assays	427
19.6.1. Figures of Merit for Qualitative (Screening) Assays	427

19.7. Examples of Validation Procedures	428
19.7.1. Validation of a Qualitative Antibiotic Susceptibility Test	428
19.7.2. Measurement of Plasma Homocysteine by Fluorescence Polarization Immunoassay (FPIA) Methodology	429
19.7.3. Determination of Enzymatic Activity of β -Galactosidase	433
19.7.4. Establishment of a Cutoff Value for Semi-Quantitative Assays for Cannabinoids	434
Suggested Reading	435
References	436

Answers to Selected Problems 437
