<i>List of Contributors</i>	xiii
<i>Foreword by John R. Engen</i>	xvii
<i>Preface</i>	xix
<i>A Note about Nomenclature</i>	xxv
1 Hydrogen Exchange: A Sensitive Analytical Window into Protein Conformation and Dynamics	1
<i>Pernille Foged Jensen and Kasper D. Rand</i>	1
1.1 Isotopic Exchange and the Study of Protein Conformation and Dynamics	3
1.2 Amide HX in Unstructured Polypeptides	4
1.2.1 Mechanisms of Base- and Acid-Catalyzed Amide HX	6
1.2.2 The Effect of pH and Temperature on Amide HX	8
1.2.3 The Effect of Sequence and Ionic Strength on Amide HX	8
1.2.4 The Effect of Solvent and Pressure on Amide HX	9
1.3 Amide HX in Folded Polypeptides	13
1.3.1 Detecting EX1 and EX2 Kinetics during an HX-MS Experiment	15
References	19
2 Hydrogen Exchange Mass Spectrometry Experimental Design	19
<i>Loo Chien Wang, Srinath Krishnamurthy, and Ganesh Srinivasan Anand</i>	19
2.1 Application of HX-MS for Protein Dynamics	19
2.1.1 Measuring Conformational Dynamics of Proteins by Hydrogen Exchange	20
2.1.2 Mapping Effects of Perturbations on Protein Dynamics	20
2.2 Factors Governing HX	20
2.2.1 pH	20
2.2.2 Temperature	21
2.2.3 Time	22
2.3 HX-MS Workflow	22
2.3.1 Sample Preparation and Sample Volumes	24
2.3.2 Preparation of Buffer Reconstituted in Deuterium Oxide	24
2.3.3 Preparation and Optimization of Reaction Quench Solution	25
2.3.4 Hydrogen Exchange Reactions	26
2.3.5 Proteolytic Digestion	27
2.3.6 Proteolytic Digest Fragment Identification by Tandem (MS/MS) Mass Spectrometry	27
2.3.7 LC Separation	27
2.3.8 Back-Exchange Consideration	29
2.4 Centroids and Data Analysis	29
2.4.1 Calculation of Centroids of Mass Spectrometric Envelopes	33
2.4.2 Displaying HX-MS Results	33
References	

3 Data Processing in Bottom-Up Hydrogen Exchange Mass Spectrometry	37
<i>Vladimir Sarpe and David C. Schriemer</i>	
3.1 Introduction	37
3.2 The Deuterated Isotopic Distribution	38
3.2.1 Calculating the Average Deuteration	39
3.2.2 Distribution Analysis	40
3.3 Essential Elements of an HX-MS Data Processing Workflow	41
3.3.1 File Import and Project Creation	42
3.3.2 Feature Processing	43
3.3.3 Data Validation	43
3.3.4 Statistical Analysis	43
3.3.5 Visualization	44
3.3.6 Integration	46
3.4 Select Software Packages for Automation of Analysis	46
3.4.1 DynamX	46
3.4.2 HDX Workbench	47
3.4.3 Mass Spec Studio	48
3.4.4 Other Packages	49
3.5 Ongoing and Future Challenges	50
References	51
4 Method Validation and Standards in Hydrogen Exchange Mass Spectrometry	55
<i>Jeffrey W. Hudgens, Richard Y.-C. Huang, and Emma D'Ambro</i>	
4.1 Introduction	55
4.2 Rationale for a Reference Measurement System for HX-MS	56
4.3 General Metrological Terminology	58
4.4 Method Validation	58
4.4.1 General Conditions	58
4.4.2 Precision	60
4.4.3 Bias	64
4.4.4 Accuracy Improvements	66
4.4.5 HX-MS and HX-NMR Cross Comparisons	67
4.5 Standards: RM	68
4.6 Summary: Maintaining Standards and Monitoring Performance	69
References	70
5 Millisecond Hydrogen Exchange	73
<i>Derek J. Wilson</i>	
5.1 Introduction	73
5.2 Instrumentation	74
5.3 Data Analysis	76
5.3.1 Millisecond HX Kinetics	76
5.3.2 Agreement with Crystal Structure	78
5.4 Applications	79
5.4.1 Millisecond Pulse Labeling for Protein Folding	80
5.4.2 Millisecond Pulse Labeling for Studying Allostery	81
5.4.3 Conformational Dynamics in Weakly Structured Regions of Proteins	84

5.4.4 Dynamics in Active Enzymes	85
5.4.5 Residual Structure in Intrinsically Disordered Proteins	87
5.5 Conclusions and Outlook	87
References	88
6 Proteases for Hydrogen Exchange Mass Spectrometry	93
<i>Eric Forest and Martial Rey</i>	
6.1 Introduction	93
6.2 The Use of Pepsin in HX-MS	93
6.2.1 Mechanisms of Proteolysis	94
6.2.2 Specificity	94
6.2.3 Tandem MS and Computer Aids for Mapping	94
6.2.4 Reproducibility	95
6.2.5 Immobilization of Proteases	95
6.2.6 Resolution	95
6.3 The Use of Other Commercially Available Proteases	96
6.4 The Use of Other Acidic Proteases After Expression or Extraction	98
References	104
7 Extracting Information from Hydrogen Exchange Mass Spectrometry Data	107
<i>Zhongqi Zhang and Jing Fang</i>	
7.1 Introduction	107
7.2 Basic Concepts in HX Data Analysis	108
7.2.1 Deuterium Incorporation	108
7.2.2 Pseudo First-Order Kinetics and HX Rate Constants	109
7.2.3 Chemical Exchange Rate Constants	109
7.2.4 Protection Factors	110
7.3 Algorithms for Extracting Rate Constants and Protection Factors	110
7.3.1 Back-Exchange Correction	110
7.3.2 Extracting Rate Constants by Nonlinear Curve Fitting	111
7.3.3 Extracting Rate Constants by Semilogarithm Plot	111
7.3.4 Extracting Rate Constant Distributions by Numerical Inverse Laplace Transform	112
7.3.5 Extracting Protection Factors by HX Modeling	114
7.4 Protein Dynamics Hidden in the Isotope Distributions	117
7.4.1 Deconvolution of Natural Isotope Distributions	118
7.4.2 Extracting Kinetic and Thermodynamic Properties of Local Unfolding Dynamics	118
7.5 Concluding Remarks and Future Prospects	123
References	123
8 Gas-Phase Fragmentation of Peptides to Increase the Spatial Resolution of the Hydrogen Exchange Mass Spectrometry Experiment	127
<i>Pernille Foged Jensen and Kasper D. Rand</i>	
8.1 Why Increase the Spatial Resolution in an HX Experiment Using MS/MS?	127
8.2 H/D Scrambling in Peptides and How to Avoid It During MS/MS	128
8.2.1 Slow Fragmentation MS/MS Techniques	128
8.2.2 Fast Fragmentation MS/MS Techniques	130
8.2.3 Model Systems for Quantitating Gas-Phase H/D Scrambling	133

8.3	Integrating Gas-Phase Fragmentation Into the Classical Bottom-Up HX-MS Workflow	135
8.3.1	Mass Spectrometers Suitable for an HX-MS/MS Workflow	138
8.3.2	Optimizing the HX-MS/MS Experiment	138
8.3.2.1	Ion Transmission Efficiency	138
8.3.2.2	Spectral Overlap	139
8.3.2.3	Peptide Charge State	139
8.3.2.4	Supplemental Activation	139
8.3.2.5	Targeted HX-MS/MS Acquisition	139
8.3.2.6	Peptide Selection	141
8.4	Recent Applications of the Bottom-Up HX-MS/MS Workflow to Pinpoint the HX Properties of Proteins	141
8.5	Future Directions	143
	References	143
9	Top-Down Hydrogen Exchange Mass Spectrometry	149
	<i>Igor A. Kaltashov, Rinat R. Abzalimov, Guanbo Wang, and Cedric E. Bobst</i>	
9.1	The Appeal of the Top-Down Scheme	149
9.2	Top-Down HX-MS of Small Proteins: The Problem of Hydrogen Scrambling	151
9.2.1	Determinants of Hydrogen Scrambling in Top-Down HX-MS Utilizing Collision-Induced Dissociation of Protein Ions	151
9.2.2	Electron-Based Ion Fragmentation Techniques as a Means of Addressing the Scrambling Problem	152
9.2.3	Top-Down HX ECD (and ETD) MS at Near-Residue Resolution	152
9.3	Conformer-Specific Characterization of Nonnative Protein States Using Top-Down HX ECD MS	156
9.3.1	Characterization of Protein Conformation in an Oligomer-Specific Fashion	156
9.3.2	Characterization of Protein Dynamics in a Conformer-Specific Fashion	157
9.4	Convergence of Top-Down and Classical Schemes of HX-MS: Combination of Proteolytic and Gas-Phase Fragmentation without Chromatographic Separation	158
9.5	The Road Ahead: Challenges and Future Directions	160
	Acknowledgments	162
	References	162
10	Histidine Hydrogen Exchange for Analysis of Protein Folding, Structure, and Function	165
	<i>Michael C. Fitzgerald, Lorrain Jin, and Duc T. Tran</i>	
10.1	Introduction	165
10.2	Mechanism of Histidine Hydrogen Exchange	166
10.3	Historical Context	167
10.4	pH-Dependent Experiments with Mass Spectrometry	168
10.4.1	Experimental Workflow	168
10.4.2	Applications	170
10.4.2.1	pK _a Analyses Using ESI-MS	170
10.4.2.2	Solvent Accessibility	171
10.4.3	Advantages and Disadvantages	174

10.5 Denaturant-Dependent Experiments	175
10.5.1 Experimental Workflow	176
10.5.2 Applications	177
10.5.2.1 Protein Folding	177
10.5.3 Advantages and Disadvantages	181
10.6 Conclusions and Future Directions	182
Acknowledgment	182
References	182
11 Hydrogen Exchange Mass Spectrometry for the Analysis of Ligand Binding and Protein Aggregation	185
<i>Ying Zhang, Don L. Rempel, and Michael L. Gross</i>	
11.1 Protein-Ligand Interactions	185
11.2 Protein-Ligand Affinity Measurements	185
11.3 Conventional Methods for Ligand Binding Characterization	186
11.4 Direct Mass Spectrometry Method	187
11.5 Mass Spectrometry and Hydrogen Exchange	187
11.5.1 HX-MS for Binding Regions	188
11.5.2 HX-MS for Binding Affinity	188
11.6 PLIMSTEX	188
11.6.1 Processing PLIMSTEX Data	190
11.6.2 Examples of PLIMSTEX	193
11.6.3 Advantages of PLIMSTEX	193
11.6.4 Disadvantages of PLIMSTEX	194
11.6.5 Dilution PLIMSTEX (dPLIMSTEX)	197
11.7 SUPREX	198
11.7.1 Examples of SUPREX	200
11.7.2 Advantages of SUPREX	200
11.7.3 Disadvantages of SUPREX	200
11.7.4 HX-MS for Binding Order	201
11.8 HX-MS for Protein-Protein Interactions	201
11.8.1 Self-Association Interactions Using Mass Spectrometry, Self-Titration, and Hydrogen Exchange (SIMSTEX) for Protein Association	201
11.8.2 Pulsed HX for Protein Aggregation	203
11.9 Conclusions	204
Acknowledgment	204
References	204
12 Application of Differential Hydrogen Exchange Mass Spectrometry in Small Molecule Drug Discovery	209
<i>Devrishi Goswami, David P. Marciano, Bruce D. Pascal, Michael J. Chalmers, and Patrick R. Griffin</i>	
12.1 Introduction	209
12.2 HX-MS in Drug Discovery	210
12.2.1 Identifying Putative Ligand Binding Sites	210
12.2.1.1 Lauimalide Binding to Microtubule	210
12.2.1.2 Activator Binding to AMP-Activated Protein Kinase	210
12.2.1.3 Small Molecule Binding to VopS, an AMPylator	211

12.2.2	HX Aids in Developing Structure–Activity Relationships	212
12.2.2.1	G Protein-Coupled Receptor Activation by Modulators	213
12.2.2.2	NR PPAR γ Activation by Small Molecules	215
12.2.3	Targeting Intrinsically Disordered Proteins to Aid Drug Discovery	215
12.3	HX in Drug Discovery Requires Automation of the HX Platform	216
12.3.1	The Case for an Automated HX-MS Workflow	216
12.3.2	Decoupled and Real-Time Automation of the HX-MS Experiment	216
12.4	The Need for Statistical Analysis of Differential HX Data	218
12.5	Challenges and Future Directions	219
	References	221
13	The Role of Hydrogen Exchange Mass Spectrometry in Assessing the Consistency and Comparability of the Higher-Order Structure of Protein Biopharmaceuticals	225
	<i>Damian Houde and Steven A. Berkowitz</i>	
13.1	Introduction	225
13.2	Biopharmaceutical Comparability	226
13.3	Internal Comparability (Innovator) versus External Comparability (Biosimilar)	227
13.4	General Challenges in Assessing the Comparability of Biopharmaceuticals in Terms of Their Higher-Order Structure	229
13.5	Higher-Order Structure and HX-MS in the Biopharmaceutical Industry	229
13.6	Challenges and Approaches of Handling Local HX-MS Data	232
13.6.1	Relative Fractional Exchange Comparability Plot	235
13.6.2	Difference Plot	237
13.7	When Is a Difference Real?	238
13.7.1	Criteria for Assessing the Presence of a Difference in HX-MS Comparability Experiments	239
13.8	An Example of HX-MS Data Processing and Display	241
13.9	Using HX-MS to Assess Structure–Function Comparability	242
13.10	The Role of HX-MS in Biopharmaceutical Comparability Studies	242
	References	244
14	Utility of Hydrogen Exchange Mass Spectrometry in Epitope Mapping	247
	<i>Richard Y.-C. Huang, Adrienne A. Tymiak, and Guodong Chen</i>	
14.1	Introduction	247
14.1.1	Rationale for Epitope Mapping	248
14.1.2	Methods for Epitope Mapping	248
14.2	HX-MS Methodology in Epitope Mapping	251
14.2.1	HX-MS Experimental Designs	251
14.2.2	HX-MS Data Interpretation	252
14.2.3	Complementary Strategies	253
14.3	Epitope Mapping Case Studies	254
14.3.1	Protein–Protein Interactions	255
14.3.2	Protein–Peptide Interactions	258
14.4	Conclusions	258

15 Hydrogen Exchange Mass Spectrometry for Proteins Adsorbed to Solid Surfaces, in Frozen Solutions, and in Amorphous Solids	265
<i>Balakrishnan S. Moorthy, Bo Xie, Jainik P. Panchal, and Elizabeth M. Topp</i>	
15.1 Introduction	265
15.2 HX-MS for Proteins Adsorbed to Solid Surfaces	266
15.2.1 Protein Structure and Dynamics at the Solid-Liquid Interface	266
15.2.2 Methods to Study Proteins Adsorbed at the Solid-Liquid Interface	266
15.2.3 Amide HX-MS for Surface-Adsorbed Proteins	267
15.3 HX-MS for Proteins in Frozen Solutions	269
15.3.1 Protein Structure and Dynamics in Frozen Solutions	269
15.3.2 Methods to Study Proteins in Frozen Solutions	269
15.3.3 Amide HX-MS of Proteins in Frozen Solutions	270
15.4 HX-MS for Proteins in Lyophilized Solids	270
15.4.1 Lyophilization and Stability of Therapeutic Proteins	270
15.4.2 Methods to Study Proteins in Lyophilized Solids	271
15.4.3 Solid-State Amide HX-MS	271
15.4.4 Data Analysis and Interpretation	272
15.5 Summary	274
References	274
16 Hydrogen Exchange Mass Spectrometry of Membrane Proteins	279
<i>Eric Forest and Martial Rey</i>	
16.1 Introduction	279
16.2 Interaction of Peptides and Proteins with Unilamellar Vesicles Mimicking the Cell Membrane	280
16.2.1 Peptide-Vesicle Interactions	280
16.2.2 Myoglobin-Vesicle Interaction	281
16.2.3 Phospholipase-Vesicle Interaction	281
16.2.4 Diphtheria Toxin-Vesicle Interaction	284
16.3 Integral Membrane Proteins	285
16.3.1 Bovine ADP/ATP Mitochondrial Carrier (bANC1p)	287
16.3.2 β_2 -Adrenergic G-Protein-Coupled Receptor (β_2 AR)	287
16.3.3 Additional Uses of DDM with Membrane Proteins	290
16.4 Proteins Inserted in Lipid Nanodiscs	291
16.5 Membrane Proteins in Organello	291
16.6 Conclusion	292
References	293
17 Analysis of Disordered Proteins by Hydrogen Exchange Mass Spectrometry	295
<i>David D. Weis</i>	
17.1 Intrinsically Disordered Proteins	295
17.1.1 Disorder Prediction	296
17.1.2 Coupled Binding and Folding by Disordered Proteins	298
17.2 Methods to Characterize Disordered Proteins	299

17.3 Applying Hydrogen Exchange Mass Spectrometry to Disordered Proteins	299
17.3.1 Kinetics of Hydrogen Exchange in Disordered Proteins	299
17.3.2 Direct Millisecond Hydrogen Exchange	304
17.3.3 Achieving Millisecond Hydrogen Exchange by Decreasing pH	304
17.3.4 Proteolysis and Peptide Mapping of IDPs	305
17.4 Identifying Disordered Regions with Hydrogen Exchange Mass Spectrometry	306
17.4.1 Apolipoprotein A-I	306
17.4.2 Peroxisome Proliferator-Activated Receptor γ Coactivator-1 α	307
17.4.3 Methyl CpG-Binding Protein 2	307
17.4.4 Inhibitor of Nuclear Factor κ B	307
17.4.5 α -Synuclein	307
17.5 Mechanism of Activation of Calcineurin by Calmodulin	308
17.6 CREB-Binding Protein and Activator of Thyroid and Retinoic Acid Receptor: Disordered Proteins that Fold upon Binding	309
17.6.1 Kinetic Analysis of Peptide-Averaged Hydrogen Exchange	310
17.6.2 Hydrogen Exchange in Molten Globular CBP	312
17.6.3 Detection of Residual Helicity in ACTR with Millisecond Hydrogen Exchange	312
17.7 Future Perspectives	316
Acknowledgments	316
References	318
18 Hydrogen Exchange Mass Spectrometry as an Emerging Analytical Tool for Stabilization and Formulation Development of Therapeutic Monoclonal Antibodies	323
<i>Ranajoy Majumdar, C. Russell Middaugh, David D. Weis, and David B. Volkin</i>	
18.1 Introduction	323
18.2 Application of the HX-MS Method to mAbs	325
18.3 HX-MS Data Analysis	326
18.4 Case Studies of the Application of HX-MS to Formulation Development of mAbs	326
18.4.1 Impact of Chemical Modifications on mAb Local Dynamics	328
18.4.2 Impact of Environmental Stresses on mAb Local Dynamics	329
18.4.3 Impact of Formulation Additives on mAb Local Dynamics, Conformational Stability, and Aggregation	331
18.5 Identification of Aggregation Hotspots in mAbs Using HX-MS	334
18.6 Challenges and Opportunities for the HX-MS Technique in mAb Formulation Development	336
18.6.1 Analytical Technology Challenges	336
18.6.2 mAb Formulation Development Challenges	337
18.7 Conclusions	338
Acknowledgments	339
References	339
