Part I Somatic Genome Variation in Animals and Humans 1

1	Polyploidy in Animal Development and Disease	3
	<i>Jennifer L. Bandura and Norman Zielke</i>	
1.1	Introduction	3
1.2	Mechanisms Inducing Somatic Ploidy	4
1.2.1	Cell Fusion	4
1.2.2	Acytokinetic Mitosis	4
1.2.3	Endomitosis	5
1.2.4	Endoreplication	5
1.2.5	Gene Amplification	7
1.2.6	Ploidy Reversal	7
1.3	The Core Cell Cycle Machinery	8
1.4	Genomic Organization of Polyploid Cells	9
1.5	Endoreplication: An Effective Tool for Post-Mitotic Growth and Tissue Regeneration	10
1.6	Initiation of Endoreplication in <i>Drosophila</i>	11
1.6.1	Endocycle Entry in Ovarian Follicle Cells	11
1.6.2	Signaling Pathways Regulating Endocycle Entry in Follicle Cells	13
1.6.3	Endocycle Entry in Other Tissues	14
1.7	Mechanisms of Endocycle Oscillations in <i>Drosophila</i>	15
1.7.1	An Autonomous Oscillator Drives Endocycling in the Salivary Gland	15
1.7.2	Alternative Modes of Endoreplication	17
1.8	Gene Amplification in <i>Drosophila</i> Follicle Cells	17
1.8.1	Molecular Mechanism of Gene Amplification	17
1.8.2	The Endocycle-to-Amplification Switch	19
1.9	Endocycle Entry in the Trophoblast Lineage	19
1.10	Mechanisms of Endocycle Oscillations in Trophoblast Giant Cells	22
1.11	Cardiomyocytes	23

1.11.1	Upstream Control of Cardiomyocyte Polyploidization	23
1.11.2	Mechanisms of Cardiomyocyte Polyploidization	24
1.11.3	Polyploidization as a Response to Tissue Damage	25
1.12	Hepatocytes	25
1.12.1	Mechanisms of Hepatocyte Polyploidization	25
1.12.2	The Ploidy Conveyor Model	26
1.12.3	Liver Regeneration	26
1.13	Megakaryocytes	28
1.13.1	Mechanisms of MKC Polyploidization	28
1.14	Concluding Remarks	30
	Acknowledgments	31
	References	31
2	Large-Scale Programmed Genome Rearrangements in Vertebrates	45
	<i>Jeremiah J. Smith</i>	
2.1	Introduction	45
2.1	Hagfish	46
2.2.1	Content of Eliminated DNA	47
2.2.2	Results and Mechanisms of Deletion	47
2.3	Sea Lamprey	48
2.3.1	Content of Eliminated DNA	48
2.3.2	Results and Mechanisms of Deletion	48
2.4	Zebra Finch	48
2.4.1	Mechanisms of Deletion	49
2.4.2	Content of Eliminated DNA	49
2.5	Emerging Themes and Directions	49
2.5.1	The Biological Function of PGR	49
2.5.2	Mechanisms of Deletion	50
2.5.3	Other Vertebrates?	51
	References	51
3	Chromosome Instability in Stem Cells	55
	<i>Paola Rebuzzini, Maurizio Zuccotti, Carlo Alberto Redi and Silvia Garagna</i>	
3.1	Introduction	55
3.2	Pluripotent Stem Cells	56
3.2.1	Primate Embryonic Stem Cells	56
3.2.2	Mouse Embryonic Stem Cells	57
3.2.3	Parthenogenetic Embryonic Stem Cells	57
3.2.4	Induced Pluripotent Stem Cells	58
3.3	Somatic Stem Cells	58
3.3.1	Mesenchymal Stem Cells	58
3.3.2	Neural Stem Cells	59
3.4	Mechanisms of Chromosomal Instability	59
3.4.1	Dysfunction in the Spindle Assembly Checkpoints	60
3.4.2	Defects of Microtubule Attachment to the Kinetochore	60

- 3.4.3 Supernumerary Centrosomes 61
- 3.4.4 Sister Chromatids Cohesion 62
- 3.5 Mechanisms of Chromosomal Instability in Stem Cells 63
- References 63

Part II Somatic Genome Variation in Plants 75

- 4 Mechanisms of Induced Inheritable Genome Variation in Flax 77**
Christopher A. Cullis
 - 4.1 Introduction 77
 - 4.2 Restructuring the Flax Genome 79
 - 4.3 Specific Genomic Changes 80
 - 4.4 What Happens When Plastic Plants Respond to Environmental Stresses? 83
 - 4.5 When Do the Genomic Changes Occur and Are they Adaptive? 83
 - 4.6 Is this Genomic Response of Flax Unique? 84
 - 4.7 Concluding Remarks 87
 - Acknowledgments 87
 - References 87
- 5 Environmentally Induced Genome Instability and its Inheritance 91**
Andrey Golubov
 - 5.1 Introduction 91
 - 5.2 Stress and its Effects on Genomes 92
 - 5.2.1 Genetic Changes 92
 - 5.2.2 DNA Repair 92
 - 5.2.3 Epigenetic Changes 93
 - 5.2.3.1 DNA Methylation 93
 - 5.2.3.2 Histone Modifications 95
 - 5.2.4 The Link between Genetic and Epigenetic Changes 95
 - 5.3 Transgenerational Inheritance 96
 - 5.4 Concluding Remarks 97
 - Acknowledgments 97
 - References 97
- 6 The Mitochondrial Genome, Genomic Shifting, and Genomic Conflict 103**
Gregory G. Brown
 - 6.1 Introduction 103
 - 6.2 Heteroplasmy and Sublimons 105
 - 6.3 Cytoplasmic Male Sterility (CMS) in Plants 108
 - 6.4 Mitochondrial Sublimons and CMS 109
 - 6.5 Restorer Gene Evolution: Somatic Genetic Changes Drive Nuclear Gene Diversity? 111
 - 6.6 Concluding Remarks 112
 - References 113

7	Plastid Genome Stability and Repair	119
	<i>Éric Zampini, Sébastien Truche, Étienne Lepage, Samuel Tremblay-Belzile and Normand Brisson</i>	
7.1	Introduction	120
7.2	Characteristics of the Plastid Genome	121
7.2.1	General Composition of the Plastid Genome	121
7.2.2	The Structure of the Plastid Genome	123
7.3	Replication of Plastid DNA	124
7.3.1	Plastid DNA Content during Development	124
7.3.2	Plastid DNA Replication Machinery	125
7.3.3	Replication Mechanisms	126
7.3.4	Origins of Replication	129
7.3.5	Nucleus and Plastid Coordination during DNA Replication	130
7.4	Transcription in the Plastid	130
7.5	The Influence of Replication and Transcription on Plastid Genome Stability	131
7.6	Plastid Genome Stability and DNA Repair	133
7.6.1	Oxidative Stress, Photo-Adaptation, and ROS Detoxification	133
7.6.2	UV-Induced DNA Damage	138
7.6.3	Recombination and DNA Double-Strand Break Repair	141
7.7	Outcomes of DNA Rearrangements	145
7.8	Concluding Remarks	147
	References	148

Part III Somatic Genome Variation in Microorganisms 165

8	RNA-Mediated Somatic Genome Rearrangement in Ciliates	167
	<i>John R. Bracht</i>	
8.1	Introduction	168
8.2	Ciliates: Ubiquitous Eukaryotic Microorganisms with a Long Scientific History	168
8.3	Two's Company: Nuclear Dimorphism in Ciliates	170
8.4	<i>Paramecium</i> : Non-Mendelian Inheritance Comes to Light	171
8.5	<i>Tetrahymena</i> and the Origin of the scanRNA Model	173
8.6	Small RNAs in <i>Stylonychia</i> and <i>Oxytricha</i>	175
8.7	Long Noncoding RNA Templates in Genome Rearrangement	176
8.8	Long Noncoding RNA: An Interface for Short Noncoding RNA	177
8.9	Short RNA-Mediated Heterochromatin Formation and DNA Elimination	179
8.10	Transposable Elements and the Origins of Genome Rearrangements	182
8.11	Transposons, Phase Variation, and Programmed Genome Engineering in Bacteria	185
8.12	Transposases, Noncoding RNA, and Chromatin Modifications in VDJ Recombination of Vertebrates	186
8.13	Concluding Remarks: Ubiquitous Genome Variation, Transposons, and Noncoding RNA	187

Acknowledgments 187

- 9 Mitotic Genome Variations in Yeast and Other Fungi 199**
Adrianna Skoneczna and Marek Skoneczny
- 9.1 Introduction 199
- 9.2 The Replication Process as a Possible Source of Genome Instability 200
- 9.2.1 DNA Polymerases as Guardians of Genome Maintenance 201
- 9.2.2 dNTP Cellular Level and their Pool Bias Contribute to Genome Stability 205
- 9.2.3 Mismatch Repair (MMR) and Ribonucleotide Excision Repair (RER) Are Used to Clean-up after Replication 218
- 9.3 Post-Replicative Repair (PRR) or Homologous Recombination (HR) Are Responsible for Error-Free and Error-Prone Repair of Blocking Lesions and Replication Stall-Borne Problems 219
- 9.3.1 Sumoylated PCNA-, Srs2-, and Replicative Polymerase-dependent DNA Synthesis on Damaged Template 221
- 9.3.2 Ubiquitinated PCNA- and Specialized Pol-Dependent Translesion Synthesis 223
- 9.3.3 The Polyubiquitinated PCNA- and Rad5-Dependent Damage Avoidance Pathway 225
- 9.3.4 The Alternative PCNA-, RPA-, and 5'-Junction-Dependent Pathway Involved in Gap Filling and Telomere Maintenance 226
- 9.3.5 Crosstalk between RFC Complexes Adapts Cellular Response to Different Stresses Arising from Genome Perturbations 226
- 9.3.6 Break-Induced Replication (BIR) Is a Vastly Inaccurate Repair Pathway 227
- 9.4 Ploidy Maintenance and Chromosome Integrity Mechanisms 229
- 9.4.1 Processes that Affect Aneuploidy in Yeasts 230
- 9.4.2 Ploidy Changes in Yeasts 231
- 9.4.3 Possible Mechanism of Ploidy Change in Yeast 232
- 9.5 Concluding Remarks 234
- References 235

Part IV General Genome Biology 251

- 10 Genome Variation in Archaeans, Bacteria, and Asexually Reproducing Eukaryotes 253**
Xiu-Qing Li
- 10.1 Introduction 254
- 10.2 Chromosome Number in Prokaryote Species 254
- 10.3 Genome Size Variation in Archaeans and Bacteria 255
- 10.4 Archaeal and Bacterial Genome Size Distribution 256
- 10.5 Genomic GC Content in Archaeans, Bacteria, Fungi, Protists, Plants, and Animals 257
- 10.6 Correlation between GC Content and Genome or Chromosome Size 259

10.7	Genome Size and GC-Content Variation in Primarily Asexually Reproducing Fungi	260
10.8	Variation of Gene Direction	263
10.9	Concluding Remarks	263
	Acknowledgments	264
	References	264
11	RNA Polyadenylation Site Regions: Highly Similar in Base Composition Pattern but Diverse in Sequence—A Combination Ensuring Similar Function but Avoiding Repetitive-Regions-Related Genomic Instability	267
	<i>Xiu-Qing Li and Donglei Du</i>	
11.1	General Introduction to Gene Number, Direction, and RNA Polyadenylation	268
11.2	Base Selection at the Poly(A) Tail Starting Position	269
11.3	Most Frequent Upstream Motifs in Microorganisms, Plants, and Animals	271
11.4	Motif Frequencies in the Whole Genome	273
11.5	The Top 20 Hexamer Motifs in the Poly(A) Site Region in Humans	273
11.6	Polyadenylation Signal Motif Distribution	273
11.7	Alternative Polyadenylation	275
11.8	Base Composition of 3'UTR in Plants and Animals	276
11.9	Base Composition Comparison between 3'UTR and Whole Genome	276
11.10	Base Composition of 3'COR in Plants and Animals	277
11.11	Base Composition Pattern of the Poly(A) Site Region in Protists	278
11.12	Base Composition Pattern of the Poly(A) Site Region in Plants	280
11.13	Base Composition Pattern of the Poly(A) Site Region in Animals	280
11.14	Comparison of Poly(A) Site Region Base Composition Patterns in Plants and Animals	280
11.15	Common U-A-U-A-U Base Abundance Pattern in the Poly(A) Site Region in Fungi, Plants, and Animals	284
11.16	Difference between the Most Frequent Motifs and Seqlogo-Showed Most Frequent Bases	284
11.17	RNA Structure of the Poly(A) Site Region	286
11.18	Low Conservation in the Overall Nucleotide Sequence of the Poly(A) Site Region	286
11.19	Poly(A) Site Region Stability and Somatic Genome Variation	286
11.20	Concluding Remarks	287
	Acknowledgments	288
	References	288
12	Insulin Signaling Pathways in Humans and Plants	291
	<i>Xiu-Qing Li and Tim Xing</i>	
12.1	Introduction	291
12.2	Ranking of the Insulin Signaling Pathway and its Key Proteins	293
12.3	Diseases Caused by Somatic Mutations of the PI3K, PTEN, and AKT Proteins in the Insulin Signaling Pathway	293

12.4	Plant Insulin and Medical Use	295
12.5	Role of the Insulin Signaling Pathway in Regulating Plant Growth	295
12.6	Concluding Remarks	295
	References	296
13	Developmental Variation in the Nuclear Genome Primary Sequence	299
	<i>Xiu-Qing Li</i>	
13.1	Introduction	299
13.2	Genetic Mutation, DNA Damage and Protection, and Gene Conversion in Somatic Cells	300
13.3	Programmed Large-Scale Variation in Primary DNA Sequences in Somatic Nuclear Genome	302
13.4	Generation of Antibody Genes in Animals through Somatic Genome Variation	303
13.5	Developmental Variation in Primary DNA Sequences in the Somatic Cells of Plants	303
13.6	Heritability and Stability of Developmentally Induced Variation in the Somatic Nuclear Genome in Plants	303
13.7	Concluding Remarks	304
	References	305
14	Ploidy Variation of the Nuclear, Chloroplast, and Mitochondrial Genomes in Somatic Cells	309
	<i>Xiu-Qing Li, Benoit Bizimungu, Guodong Zhang and Huaijun Si</i>	
14.1	Introduction	310
14.2	Nuclear Genome in Somatic Cells	311
14.2.1	Ploidy Variation of the Individual or Species in Plants and Animals	311
14.2.2	Effects of Species Ploidy Variation on the Growth of Animals and Plants	312
14.2.3	Ploidy of Bacteria	313
14.2.4	Endopolyploidy in Animal and Plant Somatic Cells	313
14.2.5	Somatic Cell Haploidization	315
14.2.6	Aneuploid Cells in Plant Somatic Tissues	315
14.2.7	Aneuploid Cells in Cancerous Masses	316
14.2.8	Nuclear B Chromosomes in Somatic Cells	316
14.3	Plastid Genome Variation in Somatic Cells	317
14.3.1	Types of Plastids	317
14.3.2	Plastid Genome and its Size in Somatic Cells	317
14.3.3	Recombination among Repeated Sequences in the Plastid Genome	318
14.3.4	Integrity of the Organelle Genome in Green Leaves under Light	318
14.3.5	Plastid Genome Ploidy or Copy Number Variation in Somatic Cells	319
14.4	Mitochondrial Genome in Somatic Cells	320
14.4.1	Mitochondrial Genome and its Size	320
14.4.2	Recombination among Repeated Sequences and Subgenomic Molecules in Mitochondria	321
14.4.3	Mitochondrial Subgenome Copy Number Variation in Somatic Cells	322

14.4.4	Nuclear and Tissue-Specific Regulation of Mitochondrial Gene Expression	322
14.4.5	Stoichiometric Variation and Effects on Mitochondrial Subgenomic Molecules	323
14.5	Organelle Genomes in Somatic Hybrids	324
14.6	Effects of Nuclear Genome Ploidy on Organelle Genomes	325
14.7	Concluding Remarks	326
	Acknowledgments	326
	References	326
15	Molecular Mechanisms of Somatic Genome Variation	337
	<i>Xiu-Qing Li</i>	
15.1	Introduction	338
15.2	Mutation of Genes Involved in the Cell Cycle, Cell Division, or Centromere Function	338
15.3	DNA Damage	338
15.4	Variation in Induction and Activity of Radical-Scavenging Enzymes	339
15.5	DNA Cytosine Deaminases	340
15.6	Variation in Protective Roles of Pigments against Oxidative Damage	340
15.7	RNA-Templated DNA Repair	341
15.8	Errors in DNA Repair	341
15.9	RNA-Mediated Somatic Genome Rearrangement	342
15.10	Repetitive DNA Instability	342
15.11	Extracellular DNA	343
15.12	DNA Transposition	343
15.13	Somatic Crossover and Gene Conversion	343
15.14	Molecular Heterosis	344
15.15	Genome Damage Induced by Endoplasmic Reticulum Stress	344
15.16	Telomere Degeneration	344
15.17	Concluding Remarks	344

18.1	Introduction	378
18.2	Natural Attributes of Somatic Genome Variation	378
18.3	Implications of Somatic Genome Variation for Human and Animal Health	380
18.3.1	Cellular-Level Variation	380
18.3.2	Ploidy and Chromosome Number Variation of the Whole Organism	380
18.3.3	Endoploidy Variation	381
18.3.4	DNA Cytosine Deaminases, Somatic Mutation, Immunoglobulin Diversity, and Tumors	381
18.3.5	Mitochondrial Genome Sequence or DNA Amount Variation	384
18.3.6	Nuclear or Ooplasmic Transfer-Based Therapy	385
18.3.7	Differential Treatments of Beneficial and Harmful SGVs	385
18.4	Implications of Somatic Genome Variation for Agriculture	385
18.4.1	Cellular-Level Variation	385
18.4.2	Ploidy and Chromosome Number Variation of the Whole Organism	386
18.4.3	Endoploidy Variation	387
18.4.4	Intra- and Interchromosomal Variation	387
18.4.5	Dedifferentiation- and Redifferentiation-Induced Variation	388
18.4.6	DNA Damage, Epigenetics, Gene Mutation, and Bud Mutation	389

18.4.7	Plastid Genome Sequence or DNA Amount Variation	389
18.4.8	Mitochondrial Genome Sequence or DNA Amount Variation	390
18.4.9	DNA Transfer, Organelle Transmission, and Organelle Genome Segregation	390
18.4.10	Intercompartmental Interaction and DNA Exchange	391
18.5	Concluding Remarks	391
	Acknowledgments	392
