Preface

xiii

1 Technological Advances in Studies of Plant Adaptation 1

José G. Vallarino and Sonia Osorio

Introduction 1

Next-Generation Sequencing Technologies 2

Applications of Next-Generation Sequencing 7

Proteome Analysis in Understanding Plant Adaptation 12

Applications of Proteomics 16

Metabolome Analysis in Plant Adaptation 17

Applications of Metabolic Profiling 18

Concluding Remarks and Future Prospects 21

Acknowledgments 22

References 22

2 Use of Natural Variation in *Arabidopsis thaliana* to Study Adaptation 31

Lisa M. Smith and Roosa A. E. Laitinen

Introduction 31

Genetic Natural Variation 33

Epigenetic Natural Variation 37

Natural Variation and Metabolites 42

Use of *A. thaliana* Hybrids in Understanding Evolution 46

Conclusions 49

Acknowledgments 50

References 50

3 Seed Dormancy, Longevity and Their Adaptation 61

Thu-Phuong Nguyen and Léonie Bentsink

Introduction 61

The Induction of Seed Dormancy and Seed Longevity 62

Factors Affecting Seed Dormancy and Seed Longevity 63

Seed Dry Storage 64

Genetics of Seed Dormancy and Seed Longevity 67

The Relation Between Seed Dormancy and Seed Longevity

and its Ecological Significance 70

Ecological Role 70

The Trade-off Between Seed Dormancy and Seed Longevity	73
Conclusions	74
References	74
4 The "Gatekeeper" Concept: Cell-Type Specific Molecular Mechanisms of Plant Adaptation to Abiotic Stress	83
Sam W. Henderson and Matthew Gilliam	
Introduction	83
The "Gatekeeper" Concept	85
Single Cell Types Within Plant Roots	86
Root Hairs – Tolerance to Phosphorus Deficiency	88
Epidermal Cells of the Root Apex – Aluminum Tolerance	91
Xylem Parenchyma Cells – Salinity Tolerance	94
Pericycle Cells – Nitrogen Starvation	99
Endodermal Cells – ABA Signaling Under Abiotic Stress	102
Beyond Gatekeepers – Conclusions and Perspectives	103
References	105
5 Regulatory and Biosynthetic Mechanisms Underlying Plant Chemical Defense Responses to Biotic Stresses	117
William R. Chezem and Nicole K. Clay	
Introduction	117
Phenylpropanoids involved in defense responses	119
Defense-Related Regulators of Phenylpropanoid Metabolism	124
Defensive Aromatic Alkaloids	126
Defense-Related Regulators of Aromatic Alkaloid Metabolism	131
Conclusions	134
References	135
6 Role of Small RNAs in Regulation of Plant Responses to Stress	147
Luis A.A. Toledo-Filho and Sascha Laubinger	
Introduction	147
miRNAs Biogenesis and Function	148
Evolution of miRNAs	149
siRNAs Biogenesis and Function	150
sRNA Stress Responses	152
sRNA in Abiotic Stress Responses	157
Conclusions and Future Prospects	162
References	163
7 Adaptation of Flower Form: An Evo-Devo Approach to Study Adaptive Evolution in Flower Morphology	171
Roxana Yockteng, Ana M.R. Almeida, Alma Piñeyro-Nelson, and Chelsea D. Specht	
Introduction	171

Flower Developmental Genetics: (A)BCs and Beyond	173
Approaches to the Study of Evolution in Floral Form	174
Using GRNs to Investigate Adaptive Evolution of Floral Form: SEP3 as a Case Study	178
Conclusions	186
Acknowledgments	187
References	187
8 Computational Approaches to Dissect and Understand Mechanisms of Adaptation	193
Sabrina Kleessen and Zoran Nikoloski	
Introduction	193
Experimental Set-Ups for Data Acquisition to Reveal Trade-Offs via Correlations	195
Pareto Front Approaches	197
The Triangulation Criterion	197
Ranking of Genotypes	199
From Models to Elements Contributing to Adaptation	201
Cellular Tasks Involved in Adaptation	204
Minimal Network Adjustments Upon Perturbations	204
Investigation of Network Adjustments by Integrating High-Throughput Data	206
Non-Steady State Behavior and Metabolic Network Adjustments	207
Future Challenges and Perspectives	209
References	210
9 From the Greenhouse to the Real World—Arabidopsis Field Trials and Applications	217
Karin I. Köhl and Roosa A.E. Laitinen	
Introduction	217
Field Experiments in <i>A. thaliana</i>	218
How to do Field Trials?	222
From Arabidopsis to Crops	230
Future Prospects	232
References	232
Index	237
