Abstract	ix
Foreward 1	xi
Foreward 2	xiii
Preface	xv
1 Multiscale Hierarchical Processes	1
1.1 Coupled Systems, Hierarchy and Emergence	2
1.2 Principles of Synergetics	12
1.3 Axiomatic Motivation of Rate Equations	15
1.4 Rate Equations in Photosynthesis	19
1.5 Top down and Bottom up Signaling	23
2 Photophysics, Photobiology and Photosynthesis	27
2.1 Light Induced State Dynamics	27
2.1.1 Light Induced Transition Probabilities and Rate Equations	32
2.1.2 Absorption and Emission of Light	33
2.1.3 Relaxation Processes and Fluorescence Dynamics	35
2.1.4 Decay Associated Spectra (DAS)	39
2.2 Rate Equations and Excited State Dynamics in Coupled Systems	41
2.2.1 Simulation of Decay-Associated Spectra	47
2.2.2 Excited States in Coupled Pigments	52
2.2.3 Förster Resonance Energy Transfer (FRET)	55
2.3 Light-Harvesting, Energy and Charge Transfer and Primary Processes of Photosynthesis	64
2.4 Antenna Complexes in Photosynthetic Systems	70
2.4.1 The Light-Harvesting Complex of PS II (LHCII) of Higher Plants	72
2.4.2 The LH1 and LH2 of Purple Bacteria	75

2.4.3	The Fenna-Matthews-Olson (FMO) Complex of Green Sulfur Bacteria	79
2.4.4	Phycobilisomes in Cyanobacteria	80
2.4.5	Antenna Structures and Core Complexes of <i>A. marina</i>	86
2.5	Fluorescence Emission as a Tool for Monitoring PS II Function	91
2.6	Excitation Energy Transfer and Electron Transfer Steps in Cyanobacteria Modeled with Rate Equations	93
2.7	Excitation Energy and Electron Transfer in Higher Plants Modeled with Rate Equations	105
2.8	Nonphotochemical Quenching in Plants and Cyanobacteria	114
2.9	Hierarchical Architecture of Plants	118
3	Formation and Functional Role of Reactive Oxygen Species (ROS)	123
3.1	Generation, Decay and Deleterious Action of ROS	125
3.1.1	Direct $^1\Delta_g O_2$ Generation by Triplet-triplet Interaction	126
3.1.2	The $O_2^{\cdot -}/H_2O_2$ System	130
3.1.3	H_2O_2 and Formation of $^1\Delta_g O_2$ and Other Reactive Species like $HO^{\cdot}$	134
3.1.4	The $HO^{\cdot}$ Radical	136
3.2	Monitoring of ROS	137
3.2.1	Exogenic ROS Sensors	138
3.2.2	Spin Traps	145
3.2.3	Genetically Encoded ROS Sensors	146
3.2.4	Electrochemical Biosensors	150
3.3	Signaling Role of ROS	151
4	ROS Signaling in Coupled Nonlinear Systems	157
4.1	Signaling by Superoxide and Hydrogen Peroxide in Cyanobacteria	158
4.2	Signaling by Singlet Oxygen and Hydrogen Peroxide in Eukaryotic Cells and Plants	163
4.3	ROS and Cell Redox Control and Interaction with the Nuclear Gene Expression	167
4.4	ROS as Top down and Bottom up Messengers	174
4.4.1	Stoichiometric and Energetic Considerations and the Role of Entropy	179
4.4.2	The Entropy in the Ensemble of Coupled Pigments	186

4.5	Second Messengers and Signaling Molecules in H_2O_2 Signaling Chains and (Nonlinear) Networking	191
4.6	ROS-Waves and Prey-Predator Models	192
4.7	Open Questions on ROS Coupling in Nonlinear Systems	196
5	The Role of ROS in Evolution	199
5.1	The Big Bang of the Ecosphere	200
5.2	Complicated Patterns Result from Simple Rules but Only the Useful Patterns are Stable	201
5.3	Genetic Diversity and Selection Pressure as Driving Forces for Evolution	205
6	Outlook: Control and Feedback in Hierarchical Systems in Society, Politics and Economics	209
	Bibliography	213
	Appendix	249
	Index	259
