

Contents

List of Contributors *xiii*

Preface *xv*

- 1 **Nature, Nurture, and Nature-by-Nurture – Killing the Dichotomy** *1*
David J. Hosken, John Hunt and Nina Wedell
 Acknowledgements *7*
 References *7*

- 2 **Ultimate (Re)Thinking for Behavioural Biology** *11*
Sasha R. X. Dall, John M. McNamara and Alastair J. Wilson
 - 2.1 Evolutionary Reasoning in Modern Behavioural Biology *13*
 - 2.2 A Quantitative Genetic View of Behavioural Evolution *15*
 - 2.3 Short-Term Ultimate Reasoning: Behavioural Genetics in a Functional Context *20*
 - 2.4 Concluding Remarks *21*
 - References *22*

- 3 **How the Dual Inheritance of Genes and Culture Shapes Behaviour: A Critical Review with a Focus on Human Culture and Behavioural Diversity** *27*
Thomas E. Currie
 - 3.1 Culture and Behaviour *27*
 - 3.2 Cultural Evolution *30*
 - 3.2.1 Processes of Cultural Evolution *31*
 - 3.2.1.1 Variation *31*
 - 3.2.1.2 Inheritance *32*
 - 3.2.1.3 Selection and Fitness *34*
 - 3.3 Insights from Cultural Evolutionary Approaches *37*
 - 3.3.1 Adaptive and Maladaptive Behaviour *37*
 - 3.4 Cultural History *39*
 - 3.5 Culture and the Evolution of Co-operation *42*
 - 3.6 Gene–Culture Coevolution *45*
 - 3.7 Conclusion *48*
 - Acknowledgements *50*
 - References *50*

4	Beyond Genes and Environments: Indirect Genetic Effects and the Evolution of Behaviour	61
	<i>John Hunt, James Rapkin, Clarissa M. House and Alastair J. Wilson</i>	
4.1	A Quantitative Genetic View of Behavioural Evolution without IGEs	63
4.2	Adding IGEs to the Traditional Theory	66
4.2.1	'Trait-Based' and 'Variance Partitioning' Models of IGEs	67
4.3	From Theory Towards Empiricism	68
4.3.1	Using Trait-Based Models	69
4.3.2	Using Variance Partitioning Models	71
4.3.3	Is Knowledge of the Interactor Trait Critical to Your Study?	72
4.4	Empirical Evidence for IGEs on Behavioural Traits	73
4.4.1	Social Plasticity of Behaviour is Widespread	73
4.4.2	Does Social Plasticity Generate IGEs on Focal Behaviour?	78
4.5	What are the Evolutionary Consequences of IGEs?	81
4.5.1	What about the Role of Social Selection?	82
4.5.2	What Happens When Ψ is Also Able to Evolve?	83
4.5.3	Can IGEs Influence Other Important Evolutionary Processes?	83
4.5.4	What are the Longer Term Consequences of IGEs?	85
4.6	Conclusions and Future Directions	85
	References	87
5	Genes and Behaviour	93
	<i>Chelsea A. Weitekamp and Laurent Keller</i>	
5.1	Genetic Architecture of Phenotypic Traits	94
5.2	Effects of Single Genes on Behaviour	95
5.2.1	The Foraging Gene and Food-Search Behaviour	97
5.2.2	Arginine Vasopressin Receptor and Pair-Bonding Behaviour	98
5.2.3	Neuropeptide Y Homolog, Sensory Neurons, and Social Feeding Behaviour	98
5.3	Effects of Supergenes on Behaviour	99
5.3.1	Social Organization in Ants	100
5.3.2	Alternative Mating Tactics in Birds	100
5.4	Evolvability of Behaviour-Associated Genes	101
5.5	Are Behavioural Traits Unique?	101
5.6	Conclusion	103
	Acknowledgements	103
	References	103
6	Genes and Environments in <i>Drosophila</i> Sex	111
	<i>David J. Hosken, Amanda Bretman, Stephen F. Goodwin and C. Ruth Archer</i>	
6.1	Some Challenges	111
6.2	Introducing <i>Drosophila</i>	112
6.3	The Behaviours	112
6.4	The Genes	113
6.4.1	Single Genes	113
6.4.2	Many Additive Genes	115

6.5	The Environments and the Interactions	116
6.5.1	Social Environments	116
6.5.2	Abiotic Environments	119
6.6	Conclusions	120
	Acknowledgements	120
	References	120
7	Nature and Nurture in Parental Care	131
	<i>Nick J. Royle and Allen J. Moore</i>	
7.1	Genetics Underlying Parental Care	133
7.1.1	Quantitative Genetic Studies	134
7.1.2	Molecular Genetic Studies	135
7.2	Parental Care is Environmentally Sensitive	137
7.2.1	Hormonal Mediation of Parental Care	138
7.3	Gene by Family Environment Interactions	141
7.3.1	GxFE Studies	141
7.3.2	Heritability of the Social Environment and IGEs	143
7.3.3	Coadaptation and Correlational Selection (Social Epistasis as a Special Case of GxFE)	145
7.4	Summary and Conclusion	147
	References	148
8	The Effect of Non-Self Genes on the Behaviour of Hosts	157
	<i>Nina Wedell</i>	
8.1	What are Non-self Genes (NSGs)?	158
8.2	Indirect Effects of NSGs	158
8.3	Direct Effects of NSGs	159
8.4	Host Responses	160
8.5	Odour is a Key Signal	161
8.6	Kin Recognition	162
8.7	Mate Choice and Reproductive Behaviour	163
8.8	Aggressiveness	166
8.9	Activity, Aggregation, and Dispersal	167
8.10	Feeding	168
8.11	Learning and Memory	170
8.12	Summary and Conclusion	171
	References	172
9	The Nature and Nurturing of Animal Minds	181
	<i>Alex Thornton and Neeltje J. Boogert</i>	
9.1	Cognition Evolves	183
9.1.1	Adaptive Cognitive Specializations	183
9.1.2	Heritability of Cognitive Traits	185
9.2	Cognition Develops	187
9.2.1	Cognitive Consequences of a Poor Start in Life	187
9.2.2	Cognitive Silver Spoons	188
9.2.3	Adaptive Developmental Plasticity in Cognition	189

9.3	Cognitive Reaction Norms: Mind-Moulding Gene-by-Environment Interactions	191
9.3.1	The Mystery of (the Lack of) Cognitive Resilience	192
9.3.2	Practice Makes Perfect: Genetic Quality and Cognitive Silver Spoons	193
9.3.3	Cultural and Epigenetic Inheritance of Cognitive Traits	194
9.3.4	Gene by Environment and Methodological Issues in Comparative Cognition	194
9.4	Conclusion	195
	References	196
10	Evolution and Human Behaviour: Helping to Make Sense of Modern Life	203
	<i>Louise Barrett and Gert Stulp</i>	
10.1	Understanding Interaction	204
10.2	Understanding the Scope and Limits of an Evolutionary Approach	205
10.3	Evolutionary Thinking as Puzzle Solving	206
10.4	Recognizing the Consequences of Our Actions	208
10.5	Thinking Differently about Fertility Control	210
10.6	Modern Contraception and Mate Choice	212
10.7	Evolution and Assisted Reproductive Technologies	214
10.8	No Free Lunch	216
10.9	Conclusion	217
	References	218
11	Next-Gen and the Study of Behaviour	223
	<i>Simone Immler</i>	
11.1	Current Sequencing Technologies	223
11.1.1	Genome-Wide Association Study (GWAS) and Linkage Mapping	224
11.1.1.1	Microarrays	226
11.1.1.2	RAD Sequencing	227
11.1.1.3	Exome Sequencing	227
11.1.1.4	Whole-Genome Sequencing	227
11.1.2	Gene Expression Analyses	228
11.1.2.1	RNA Sequencing (RNAseq)	228
11.1.3	Epigenetic Analyses	228
11.1.3.1	ChIP Sequencing (ChIPseq)	228
11.1.3.2	Bisulfite Sequencing	229
11.2	Caveats and Challenges and Some Solutions	229
11.2.1	Solid Phenotype	229
11.2.2	Sample Quality	230
11.2.3	Sampling	230
11.2.4	Libraries and Sample Pools	230
11.2.5	Reference Genome	231
11.2.6	Sample Size	232
11.2.7	Replication	232
11.2.8	Coverage	232
11.2.9	Pilot Studies	233

11.2.10	Time and Planning	233
11.2.11	Bioinformatics	233
11.2.12	Collaboration	234
11.3	Linking Behavioural Phenotypes to Genotypes using NGS	234
11.4	What's Next	237
11.4.1	Understanding the Non-Coding Regions of the Genome	238
11.4.2	Gene Knock-down and Knock-out in Non-Model Organisms	238
11.5	Concluding Remarks	240
	References	240
12	Nature-Nurture in the Twenty-First Century	245
	<i>Nina Wedell, John Hunt and David J. Hosken</i>	
	Acknowledgements	249
	References	249
	Index	253
