

Contents

1 Introduction to Cell Biology	1
1.1 The Discovery of Cells	2
Microscopy	2
Cell Theory	3
1.2 Basic Properties of Cells	3
Cells Are Highly Complex and Organized	3
Cells Possess a Genetic Program and the Means to Use It	5
Cells Are Capable of Producing More of Themselves	5
Cells Acquire and Utilize Energy	5
Cells Carry Out a Variety of Chemical Reactions	6
Cells Engage in Mechanical Activities	6
Cells are Able to Respond to Stimuli	6
Cells Are Capable of Self-Regulation	6
Cells Evolve	7
1.3 Two Fundamentally Different Classes of Cells	8
1.4 Types of Prokaryotic Cells	14
Domain Archaea and Domain Bacteria	14
Prokaryotic Diversity	14
1.5 Types of Eukaryotic Cells	15
Cell Differentiation	16
Model Organisms	16
1.6 The Sizes of Cells and Their Components	18
1.7 Viruses	19
Viroids	22
THE HUMAN PERSPECTIVE	23
The Prospect of Cell Replacement Therapy	23
EXPERIMENTAL PATHWAYS	27
The Origin of Eukaryotic Cells	27
2 The Structure and Functions of Biological Molecules	33
2.1 Covalent Bonds	34
Polar and Nonpolar Molecules	35
Ionization	36
2.2 Noncovalent Bonds	36
Ionic Bonds: Attractions between Charged Atoms	36
Hydrogen Bonds	36
Hydrophobic Interactions and van der Waals Forces	37
The Life-Supporting Properties of Water	38
2.3 Acids, Bases, and Buffers	39
2.4 The Nature of Biological Molecules	40
Functional Groups	41
A Classification of Biological Molecules by Function	41
2.5 Carbohydrates	42
The Structure of Simple Sugars	43
Stereoisomerism	43
Linking Sugars Together	44
Polysaccharides	45
2.6 Lipids	47
Fats	47
Steroids	48
Phospholipids	48
2.7 Building Blocks of Proteins	49
The Structures of Amino Acids	50
The Properties of the Side Chains	51
2.8 Primary and Secondary Structures of Proteins	54
Primary Structure	54
Secondary Structure	55
2.9 Tertiary Structure of Proteins	56
Myoglobin: The First Globular Protein Whose Tertiary Structure Was Determined	57
Tertiary Structure May Reveal Unexpected Similarities between Proteins	58
Protein Domains	58
Dynamic Changes within Proteins	59
2.10 Quaternary Structure of Proteins	60
The Structure of Hemoglobin	60
Protein-Protein Interactions	61
2.11 Protein Folding	61
Dynamics of Protein Folding	62
The Role of Molecular Chaperones	63
2.12 Proteomics and Interactomics	64
Proteomics	64
Interactomics	66
2.13 Protein Engineering	67
Production of Novel Proteins	67
Structure-Based Drug Design	68
2.14 Protein Adaptation and Evolution	69
2.15 Nucleic Acids	71
2.16 The Formation of Complex Macromolecular Structures	72
The Assembly of Tobacco Mosaic Virus Particles	73
The Assembly of Ribosomal Subunits	73
THE HUMAN PERSPECTIVE	73
I. Do Free Radicals Cause Aging?	73
II. Protein Misfolding Can Have Deadly Consequences	74

EXPERIMENTAL PATHWAYS 79

Chaperones—Helping Proteins Reach Their Proper Folded State 79

3 Bioenergetics, Enzymes, and Metabolism 87**3.1 Bioenergetics 88**

The First Law of Thermodynamics 88

The Second Law of Thermodynamics 89

3.2 Free Energy 90

Free-Energy Changes in Chemical Reactions 91

Free-Energy Changes in Metabolic Reactions 92

3.3 Coupling Endergonic and Exergonic Reactions 94**3.4 Equilibrium versus Steady-State Metabolism 94****3.5 Enzymes as Biological Catalysts 95**

The Properties of Enzymes 96

Overcoming the Activation Energy Barrier 96

The Active Site 98

3.6 Mechanisms of Enzyme Catalysis 99

Substrate Orientation 100

Changing Substrate Reactivity 100

Inducing Strain in the Substrate 100

3.7 Enzyme Kinetics 103

The Michaelis-Menten Model of Enzyme Kinetics 103

Enzyme Inhibitors 105

3.8 Metabolism 106

Oxidation and Reduction: A Matter of Electrons 107

The Capture and Utilization of Energy 108

3.9 Glycolysis and ATP Production 108

ATP Production in Glycolysis 109

Anaerobic Oxidation of Pyruvate: The Process of Fermentation 111

3.10 Reducing Power 112**3.11 Metabolic Regulation 113**

Altering Enzyme Activity by Covalent Modification 113

Altering Enzyme Activity by Allosteric Modulation 113

3.12 Separating Catabolic and Anabolic Pathways 114**THE HUMAN PERSPECTIVE 115**

I. The Growing Problem of Antibiotic Resistance 115

II. Caloric Restriction and Longevity 118

4 Genes, Chromosomes, and Genomes 123**4.1 The Concept of a Gene as a Unit of Inheritance 124****4.2 The Discovery of Chromosomes 125****4.3 Chromosomes: The Physical Carriers of the Genes 126**

The Chromosome as a Linkage Group 127

4.4 Genetic Analysis in *Drosophila* 127

Crossing Over and Recombination 128

Mutagenesis and Giant Chromosomes 129

4.5 The Structure of DNA 129

The Watson-Crick Proposal 132

The Importance of the Watson-Crick Proposal 132

4.6 DNA Supercoiling 134**4.7 The Structure of the Genome 136**

DNA Denaturation 137

DNA Renaturation 137

4.8 The Stability of the Genome 141

Whole-Genome Duplication (Polyploidization) 141

Duplication and Modification of DNA Sequences 141

Evolution of Globin Genes 142

4.9 "Jumping Genes" and the Dynamic Nature of the Genome 143

Transposons 144

The Role of Mobile Genetic Elements in Genome Evolution 144

4.10 Sequencing Genomes: The Footprints of Biological Evolution 146**4.11 Comparative Genomics: "If It's Conserved, It Must Be Important" 148****4.12 The Genetic Basis of "Being Human" 148****4.13 Genetic Variation within the Human Species Population 150**

DNA Sequence Variation 150

Structural Variation 151

Copy Number Variation 152

THE HUMAN PERSPECTIVE 152

I. Diseases That Result from Expansion of Trinucleotide Repeats 152

II. Application of Genomic Analyses to Medicine 154

EXPERIMENTAL PATHWAYS 157

The Chemical Nature of the Gene 157

5 The Path to Gene Expression 165**5.1 The Relationship between Genes, Proteins, and RNAs 166**

Evidence That DNA Is the Genetic Material 166

An Overview of the Flow of Information through the Cell 167

5.2 The Role of RNA Polymerases in Transcription 169**5.3 An Overview of Transcription in Both Prokaryotic and Eukaryotic Cells 171**

Transcription in Bacteria	171
Transcription and RNA Processing in Eukaryotic Cells	172
5.4 Synthesis and Processing of Eukaryotic Ribosomal and Transfer RNAs	174
Synthesis and Processing of the rRNA Precursor	174
The Role of snoRNAs in the Processing of Pre-rRNA	176
Synthesis and Processing of the 5S rRNA	176
Transfer RNAs	177
5.5 Synthesis and Structure of Eukaryotic Messenger RNAs	178
The Formation of Heterogeneous Nuclear RNA (hnRNA)	178
The Machinery for mRNA Transcription	178
The Structure of mRNAs	181
5.6 Split Genes: An Unexpected Finding	181
5.7 The Processing of Eukaryotic Messenger RNAs	184
5' Caps and 3' Poly(A) Tails	185
RNA Splicing: Removal of Introns from a Pre-RNA	186
5.8 Evolutionary Implications of Split Genes and RNA Splicing	189
5.9 Creating New Ribozymes in the Laboratory	191
5.10 Small Regulatory RNAs and RNA Silencing Pathway	191
5.11 Small RNAs: miRNAs and piRNAs	193
miRNAs: A Class of Small RNAs that Regulate Gene Expression	193
piRNAs: A Class of Small RNAs that Function in Germ Cells	194
5.12 CRISPR and other Noncoding RNAs	195
CRISPR: Noncoding RNA in Bacteria	195
Other Noncoding RNAs	195
5.13 Encoding Genetic Information	196
The Properties of the Genetic Code	196
Identifying the Codons	197
5.14 Decoding the Codons: The Role of Transfer RNAs	198
The Structure of tRNAs	198
tRNA Charging	200
5.15 Translating Genetic Information: Initiation	201
Initiation of Translation in Prokaryotes	202
Initiation of Translation in Eukaryotes	203
The Role of the Ribosome	203
5.16 Translating Genetic Information: Elongation and Termination	205
Elongation Step 1: Aminoacyl-tRNA Selection	205
Elongation Step 2: Peptide Bond Formation	205
Elongation Step 3: Translocation	205
Elongation Step 4: Releasing the Deacylated tRNA	206
Termination	207
5.17 mRNA Surveillance and Quality Control	208
5.18 Polyribosomes	209
THE HUMAN PERSPECTIVE	210
Clinical Applications of RNA Interference	210
EXPERIMENTAL PATHWAYS	212
The Role of RNA as a Catalyst	212
6 Controlling Gene Expression	220
6.1 Control of Gene Expression in Bacteria	221
Organization of Bacterial Genomes	221
The Bacterial Operon	221
Riboswitches	224
6.2 Control of Gene Expression in Eukaryotes: Structure and Function of the Cell Nucleus	225
The Nuclear Pore Complex and Its Role in Nucleocytoplasmic Trafficking	227
RNA Transport	230
6.3 Chromosomes and Chromatin	230
Nucleosomes: The Lowest Level of Chromosome Organization	230
Higher Levels of Chromatin Structure	232
6.4 Heterochromatin and Euchromatin	234
X Chromosome Inactivation	234
The Histone Code and Formation of Heterochromatin	235
6.5 The Structure of a Mitotic Chromosome	238
Telomeres	240
Centromeres	243
6.6 Epigenetics: There's More to Inheritance than DNA	243
6.7 The Nucleus as an Organized Organelle	244
6.8 An Overview of Gene Regulation in Eukaryotes	247
6.9 Transcriptional Control	248
DNA Microarrays	249
RNA Sequencing	251
6.10 The Role of Transcription Factors in Regulating Gene Expression	252
The Role of Transcription Factors in Determining a Cell's Phenotype	252
6.11 The Structure of Transcription Factors	253
Transcription Factor Motifs	253
6.12 DNA Sites Involved in Regulating Transcription	256
6.13 The Glucocorticoid Receptor: An Example of Transcriptional Activation	258
6.14 Transcriptional Activation: The Role of Enhancers, Promoters, and Coactivators	259
Coactivators That Interact with the Basal Transcription Machinery	260
Coactivators That Alter Chromatin Structure	260

6.15	Transcriptional Activation from Paused Polymerases	263
6.16	Transcriptional Repression	264
	DNA Methylation	264
	Genomic Imprinting	265
	Long Noncoding RNAs (lncRNAs) as Transcriptional Repressors	266
6.17	RNA Processing Control	267
6.18	Translational Control	269
	Initiation of Translation	269
	Cytoplasmic Localization of mRNAs	270
	The Control of mRNA Stability	271
6.19	The Role of MicroRNAs in Translational Control	273
6.20	Posttranslational Control: Determining Protein Stability	274
	THE HUMAN PERSPECTIVE	275
	Chromosomal Aberrations and Human Disorders	275

7 DNA Replication and Repair 282

7.1	DNA Replication	283
7.2	DNA Replication in Bacterial Cells	286
	Replication Forks and Bidirectional Replication	287
	Unwinding the Duplex and Separating the Strands	287
	The Properties of DNA Polymerases	288
	Semidiscontinuous Replication	289
7.3	The Machinery Operating at the Replication Fork	291
7.4	The Structure and Functions of DNA Polymerases	293
	Exonuclease Activities of DNA Polymerases	293
	Ensuring High Fidelity during DNA Replication	294
7.5	Replication in Viruses	296
7.6	DNA Replication in Eukaryotic Cells	296
	Initiation of Replication in Eukaryotic Cells	297
	Restricting Replication to Once Per Cell Cycle	297
	The Eukaryotic Replication Fork	298
	Replication and Nuclear Structure	300
7.7	Chromatin Structure and Replication	300
7.8	DNA Repair	302
	Nucleotide Excision Repair	302
	Base Excision Repair	303
	Mismatch Repair	304
	Double-Strand Breakage Repair	304
7.9	Between Replication and Repair	305
	THE HUMAN PERSPECTIVE	306
	Consequences of DNA Repair Deficiencies	306

8 Cellular Membrane 311

8.1	Introduction to the Plasma Membrane	312
	An Overview of Membrane Functions	312
	A Brief History of Studies on Plasma Membrane Structure	313
8.2	The Chemical Composition of Membranes	315
	Membrane Lipids	316
	The Nature and Importance of the Lipid Bilayer	317
	The Asymmetry of Membrane Lipids	319
8.3	Membrane Carbohydrates	319
8.4	The Structure and Functions of Membrane Proteins	320
	Integral Membrane Proteins	321
	Peripheral Membrane Proteins	322
	Lipid-Anchored Membrane Proteins	322
8.5	Studying the Structure and Properties of Integral Membrane Proteins	323
	Identifying Transmembrane Domains	324
	Experimental Approaches to Identifying Conformational Changes within an Integral Membrane Protein	325
8.6	Membrane Lipids and Membrane Fluidity	327
	The Importance of Membrane Fluidity	328
	Maintaining Membrane Fluidity	328
	Lipid Rafts	329
8.7	The Dynamic Nature of the Plasma Membrane	329
	The Diffusion of Membrane Proteins after Cell Fusion	330
	Restrictions on Protein and Lipid Mobility	331
8.8	The Red Blood Cell: An Example of Plasma Membrane Structure	334
	Integral Proteins of the Erythrocyte Membrane	334
	The Erythrocyte Membrane Skeleton	336
8.9	The Movement of Substances across Cell Membranes	336
	The Energetics of Solute Movement	336
	Formation of an Electrochemical Gradient	337
8.10	Diffusion through the Lipid Bilayer	338
	Diffusion of Substances through Membranes	338
	The Diffusion of Water through Membranes	338
8.11	The Diffusion of Ions through Membranes	340
8.12	Facilitated Diffusion	345
8.13	Active Transport	346
	Primary Active Transport: Coupling Transport to ATP Hydrolysis	346
	Other Primary Ion Transport Systems	347
	Using Light Energy to Actively Transport Ions	348
	Secondary Active Transport (or Cotransport): Coupling Transport to Existing Ion Gradients	348
8.14	Membrane Potentials	350
	The Resting Potential	350
	The Action Potential	352

- 8.15 Propagation of Action Potentials as an Impulse 353

Ca ²⁺ -Binding Proteins	654
Regulating Calcium Concentrations in Plant Cells	654
15.13 Convergence, Divergence, and Cross-Talk among Different Signaling Pathways	655
15.14 The Role of NO as an Intercellular Messenger	657
NO as an Activator of Guanylyl Cyclase	658
Inhibiting Phosphodiesterase	658
15.15 Apoptosis (Programmed Cell Death)	659
The Extrinsic Pathway of Apoptosis	660
The Intrinsic Pathway of Apoptosis	661
Necroptosis	662
Signaling Cell Survival	663
THE HUMAN PERSPECTIVE	663
Disorders Associated with G Protein-Coupled Receptors	663
EXPERIMENTAL PATHWAYS	665
The Discovery and Characterization of GTP-Binding Proteins	665
16 Cancer	673
16.1 Basic Properties of a Cancer Cell	674
16.2 The Causes of Cancer	677
16.3 The Genetics of Cancer	678
16.4 An Overview of Tumor-Suppressor Genes and Oncogenes	680
16.5 Tumor-Suppressor Genes: The RB Gene	681
16.6 Tumor-Suppressor Genes: The TP53 Gene	684
The Role of p53: Guardian of the Genome	684
The Role of p53 in Promoting Senescence	686
16.7 Other Tumor-Suppressor Genes	687
16.8 Oncogenes	688
Oncogenes That Encode Growth Factors or Their Receptors	688
Oncogenes That Encode Cytoplasmic Protein Kinases	689
Oncogenes That Encode Transcription Factors	689
Oncogenes That Encode Proteins That Affect the Epigenetic State of Chromatin	689
Oncogenes That Encode Metabolic Enzymes	690
Oncogenes That Encode Products That Affect Apoptosis	690
16.9 The Mutator Phenotype: Mutant Genes Involved in DNA Repair	691
16.10 MicroRNAs: A New Player in the Genetics of Cancer	691
16.11 The Cancer Genome	691
16.12 Gene-Expression Analysis	694
16.13 Strategies for Combating Cancer	696
16.14 Immunotherapy	696
16.15 Inhibiting the Activity of Cancer-Promoting Proteins	698
16.16 The Concept of a Cancer Stem Cell	701
16.17 Inhibiting the Formation of New Blood Vessels (Angiogenesis)	701
EXPERIMENTAL PATHWAYS	702
The Discovery of Oncogenes	702
17 Immunity	709
17.1 An Overview of the Immune Response	710
Innate Immune Responses	711
Adaptive Immune Responses	713
17.2 The Clonal Selection Theory as It Applies to B Cells	714
17.3 Vaccination	715
17.4 T Lymphocytes: Activation and Mechanism of Action	717

17.5 The Modular Structure of Antibodies	720	18.11 Purification and Characterization of Proteins by Liquid Column Chromatography	762
17.6 DNA Rearrangements That Produce Genes Encoding B- and T-Cell Antigen Receptors	723	Ion-Exchange Chromatography	763
17.7 Membrane-Bound Antigen Receptor Complexes	725	Gel Filtration Chromatography	763
17.8 The Major Histocompatibility Complex	726	Affinity Chromatography	764
17.9 Distinguishing Self from Nonself	730	18.12 Determining Protein-Protein Interactions	764
17.10 Lymphocytes Are Activated by Cell-Surface Signals	731	18.13 Characterization of Proteins by Polyacrylamide Gel Electrophoresis	766
2014 Activation of Helper T Cells by Professional APCs	731	SDS-PAGE	767
Activation of B Cells by T _H Cells	732	Two-Dimensional Gel Electrophoresis	767
17.11 Signal Transduction Pathways in Lymphocyte Activation	732	18.14 Characterization of Proteins by Spectrometry	767
THE HUMAN PERSPECTIVE	733	18.15 Characterization of Proteins by Mass Spectrometry	767
2012 Autoimmune Diseases	733	18.16 Determining the Structure of Proteins and Multisubunit Complexes	768
EXPERIMENTAL PATHWAYS	736	18.17 Fractionation of Nucleic Acids	770
The Role of the Major Histocompatibility Complex in Antigen Presentation	736	Separation of DNAs by Gel Electrophoresis	770
2011 Separation of Nucleic Acids by Ultracentrifugation	771	18.18 Nucleic Acid Hybridization	773
18 Techniques in Cell and Molecular Biology	742	18.19 Chemical Synthesis of DNA	774
18.1 The Light Microscope	743	18.20 Recombinant DNA Technology	774
Resolution	744	Restriction Endonucleases	774
2008 Visibility	745	Formation of Recombinant DNAs	775
18.2 Bright-Field and Phase-Contrast Microscopy	745	DNA Cloning	776
Bright-Field Light Microscopy	745	18.21 Enzymatic Amplification of DNA by PCR	778
Phase-Contrast Microscopy	746	Process of PCR	778
18.3 Fluorescence Microscopy (and Related Fluorescence-Based Techniques)	746	Applications of PCR	778
2004 Laser Scanning Confocal Microscopy	749	18.22 DNA Sequencing	780
Super-Resolution Fluorescence Microscopy	750	18.23 DNA Libraries	782
Light Sheet Fluorescence Microscopy	751	Genomic Libraries	782
18.4 Transmission Electron Microscopy	752	cDNA Libraries	783
18.5 Specimen Preparation for Electron Microscopy	753	18.24 DNA Transfer into Eukaryotic Cells and Mammalian Embryos	783
Cryofixation and the Use of Frozen Specimens	754	Transgenic Animals	785
2003 Negative Staining	755	Transgenic Plants	785
Shadow Casting	755	18.25 Gene Editing and Silencing	786
2002 Freeze-Fracture Replication and Freeze Etching	756	In Vitro Mutagenesis	786
18.6 Scanning Electron Microscopy	757	Knockout Mice	787
18.7 Atomic Force Microscopy	758	RNA Interference	788
18.8 The Use of Radioisotopes	759	Genome Editing Using Engineered Nucleases	789
18.9 Cell Culture	760	18.26 The Use of Antibodies	789
18.10 The Fractionation of a Cell's Contents by Differential Centrifugation	762	Glossary	G-1
		Additional Reading	A-1
		Index	I-1
