Preface xiii

Acknowledgements xv

1 Introduction 1

Lessons from the Past 1

Ecological versus Historical Biogeography,
and Plants versus Animals 4

Biogeography and Creation 5

The Distribution of Life Today 7

Evolution – a Flawed and Dangerous Idea! 8

Enter Darwin – and Wallace 10

World Maps – the Biogeographical Regions of Plants
and Animals 13

Getting Around the World 15

The Origins of Modern Historical Biogeography 20

The Development of Ecological Biogeography 23

Living Together 24

Marine Biogeography 27

Island Biogeography 28

Biogeography Today 30

SECTION I: THE CHALLENGE OF EXISTING 37

2 Patterns of Distribution: Finding a Home 39

Limits of Distribution 42

The Niche 44

Overcoming the Barriers 45

Climatic Limits: The Palms	46
A Successful Family: The Daisies (Asteraceae)	48
Patterns Among Plovers	51
Magnolias: Evolutionary Relicts	55
The Strange Case of the Testate Amoeba	57
Climatic Relicts	58
Topographical Limits and Endemism	65
Physical Limits	67
Species Interactions: A Case of the Blues	73
Competition	75
Reducing Competition	76
Predators and Prey, Parasites and Hosts	79
Migration	83
Invasion	85

3 Communities and Ecosystems: Living Together 97

The Community	97
The Ecosystem	100
Ecosystems and Species Diversity	103
Biotic Assemblages on a Global Scale	108
Mountain Biomes	112
Global Patterns of Climate	116
Climate Diagrams	119
Modelling Biomes and Climate	122

4 Patterns of Biodiversity 127

Measuring Biodiversity: How Many Species are There?	128
Latitudinal Gradients of Diversity	132
Is Evolution Faster in the Tropics?	139
The Legacy of Glaciation	141
Latitude and Species Ranges	142
Diversity and Altitude	143
Biodiversity Hotspots	146
Diversity in Space and Time	148
The Intermediate Disturbance Hypothesis	151
Dynamic Biodiversity and Neutral Theory	151

SECTION II: THE ENGINES OF THE PLANET 157

5 Plate Tectonics 159

- The Evidence for Plate Tectonics 159
- Changing Patterns of Continents 164
- How Plate Tectonics Changes the World 164
- Islands and Plate Tectonics 172
- Terranes 174

6 Evolution, the Source of Novelty 179

- The Origin of Novelty 179
- From Populations to Species 180
- Sympatry versus Allopatry 183
- Defining the Species 188
- Microevolution versus Macroevolution 189
- Adaptive Radiations 189
- Naming and Cataloguing the Living World 189
- Charting the Course of Evolution 190
- Morphology Gives Way to Molecules 193
- Darwin's Finches Updated 194

SECTION III: ISLANDS AND OCEANS 197

7 Life, Death and Evolution on Islands 199

- Types of Island 200
- Getting There: The Challenges of Arriving 200
- Dying There: The Problems of Survival 202
- Adapting and Evolving 203
- The Hawaiian Islands 206
- Integrating the Data: The Theory of Island Biogeography 214
- Modifying the Theory 216
- The General Dynamic Model for Oceanic Island Biogeography 219
- Nestedness 221
- Living Together: Incidence and Assembly Rules 221
- Building an Ecosystem: The History of Rakata 223

8 Patterns in the Oceans 235

- Zones in the Ocean and on the Sea Floor 237
- Basic Biogeography of the Seas 240
- The Open-Sea Environment 240
- The Ocean Floor 246
- The Shallow-Sea Environment 250
- And Finally ... Marine Biogeographical Realms
of the World 263

SECTION IV: HISTORICAL BIOGEOGRAPHY 269

9 From Evolution to Patterns of Life 271

- Studying the Patterns 272
- Methods of Analyzing the Patterns 273
- Studying Organisms and their Molecules 287
- An Integrative Approach to Historical Biogeography 290
- Investigating the More Distant Past 292

10 Geography, Life and Climates Through Time 299

- Introduction 299
- Early Land Life on the Moving Continents 300
- Animal Life Through the Mesozoic 304
- The End of the Mesozoic World 308
- Climates and Plants Through Time 309
- Reconstructing Plant Life and Biomes 310
- Evolution of the Mammals 318
- The Mesozoic Roots of the Radiation of
Modern Mammals 320

11 Patterns of Life Today 327

- The Biogeographical Regions Today 327
- The History of Today's Biogeographical Regions 334
- The Old World Tropics: Africa, India and
Southeast Asia 334
- Australia 342
- New Caledonia 345
- New Zealand 346

The West Indies	348
South America	351
The Northern Hemisphere: Holarctic Mammals and Boreal Plants	359

12 The Arrival of the Ice Ages 367

Climatic Wiggles	368
Interglacials and Interstadials	369
Biological Changes in the Pleistocene	371
The Last Glacial	375
Causes of Glaciation	382
The Current Interglacial: A False Start	388
Forests on the Move	390
The Dry Lands	393
Changing Sea Levels	396
A Time of Warmth	398
Climatic Cooling	399
Recorded History	400
Atmosphere and Oceans: Short-Term Climate Change	402
The Future	403

SECTION V: PEOPLE AND PROBLEMS 409

13 The Human Intrusion 411

The Emergence of Humans	411
Modern Humans and the Megafaunal Extinctions	420
Plant Domestication and Agriculture	423
Animal Domestication	428
The Diversification of <i>Homo sapiens</i>	430
The Biogeography of Human Parasitic Diseases	431
The Environmental Impact of Early Human Cultures	434

14 Conservation Biogeography 439

Welcome to the Anthropocene	439
The Sixth Mass Extinction?	440
Less, and Less Interesting	444

What's Behind the Biodiversity Crisis?	445
Crisis Management: Responding to Biodiversity Loss	451
The Birth of Conservation Biogeography	452
The Scope of Conservation Biogeography	453
Conservation Biogeography in Action	459
The Future is Digital	462
Conclusions	463

Glossary	471
