

Contents

Preface	xi
Acknowledgements	xiii
1 Life, Energy and Light	1
1.1 The Definition of Life	1
1.2 The Energy of Matter	2
1.2.1 <i>The Source of Life's Energy</i>	3
1.3 Energy for the Future	3
1.4 Photosynthesis by Life	4
1.4.1 <i>Photon Energy Transformations</i>	5
Reference	6
Bibliography	6
2 The Space of the Cell	7
2.1 The Cell Concept: Fundamental Nature of Life	7
2.2 Compartmentalization: The Cult of the Membrane	9
2.3 Membrane Components: Fundamentals of Proteins	12
2.4 Functional Classification of Membrane Proteins	15
Reference	16
Bibliography	16
3 The Photosynthetic Membrane: Outlook	17
3.1 Knowledge of the Pre-Atomic Structure Era: Organization of the Photosynthetic Membrane System	17
3.2 Composition of the Photosynthetic Membrane	21
3.2.1 <i>Lipids</i>	21
3.2.2 <i>Lipid-Related Compounds of the Photosynthetic Membrane</i>	22
3.2.3 <i>Proteins and Protein Complexes</i>	25
3.3 Oligomerization, Interactions and Mobility of the Photosynthetic Proteins: Enabling Functions and Adaptations	28
3.3.1 <i>Oligomerization and Clustering of Photosynthetic Membrane Proteins</i>	28
3.3.2 <i>Protein Mobility</i>	30
Reference	32
Bibliography	32

4 Popular Methods and Approaches to Study Composition, Structure and Functions of the Photosynthetic Membrane	33
4.1 Biochemistry and Molecular Biology Approaches	33
4.1.1 Isolation of Chloroplasts and Subchloroplast Particles	33
4.1.2 Isolation of Membrane Protein Complexes	35
4.1.3 Analysis of Lipids and Pigments	37
4.1.4 Protein Expression and Reconstitution In Vitro	38
4.1.5 Reconstitution of Membrane Proteins in Liposomes	39
4.1.6 Mutagenesis and Transgenic Manipulations	40
4.2 Visualization Techniques	41
4.2.1 Optical Microscopy	41
4.2.2 Electron Microscopy (EM)	42
4.2.3 Atomic Force Microscopy (AFM)	45
4.2.4 Crystallography Methods	45
4.3 Function Probing Methods	48
4.3.1 Absorption-Based Approaches	49
4.3.2 Raman Spectroscopy	54
4.3.3 Fluorescence-Based Approaches	55
References	65
Bibliography	65
5 Primary Processes of the Light Phase of Photosynthesis: Principles of Light Harvesting in Antennae	67
5.1 The Nature of Light	67
5.2 Absorption of Light by Molecules	71
5.3 Fate of Absorbed Light Energy	73
5.4 The Need for the Photosynthetic Antenna and the Fifth Fate of Excitation Energy	75
5.5 Photosynthetic Antenna Pigments	81
5.5.1 Chlorophylls	82
5.5.2 Xanthophylls	87
5.6 Variety and Classification of Photosynthetic Antennae	91
5.7 Principles of Light Harvesting: Summary	93
5.8 Connecting Light Harvesting Antenna to the Photosystems: Red Energy Traps	96
References	99
Bibliography	99
6 Towards the Atomic Resolution Structure of Light Harvesting Antennae: On the Path of Discoveries	101
6.1 Discovery and Primary Characterization of the Higher Plant Antenna Complex	102
6.2 Development of Isolation Methods: Intactness, Purity and Quantity	104

6.3	LHCII Crystallography: The Beginnings	107
6.4	Revealing the Atomic Resolution Structure of LHCII Antenna Complexes	111
6.4.1	<i>Key Biochemical and Spectroscopic Advances that Aided the Emergence of the Current Atomic LHCIIb Structure</i>	111
6.4.2	<i>The New Structure of LHCIIb</i>	115
6.5	Structure of a Minor LHCII Complex CP29	126
6.6	Comparison of LHCII Structure with the Structure of a Simpler Light Harvesting Complex from Purple Bacteria, LH2	129
	References	133
	Bibliography	134
7	Structural Integration of Antennae within Photosystems	135
7.1	Light Harvesting Complexes Gene Family	136
7.2	Toward the Structure of a Complete Photosystem II Unit: Supercomplexes	137
7.3	Supramolecular Structure of Photosystem I: LHCI	145
7.4	Photosynthetic Membrane Protein Landscapes	147
7.5	Robustness of the Light Harvesting Antenna Design: Resurrecting the Structure to Preserve the Function	150
	References	156
	Bibliography	157
8	Dynamics of Light Harvesting Antenna: Spectroscopic Insights	159
8.1	Steady-State Optical Spectroscopy of LHCII: Composition and Order	160
8.2	Time-Resolved Spectroscopy of LHCII: Energy Migration	165
8.2.1	<i>Time-Resolved Fluorescence Spectroscopy</i>	165
8.2.2	<i>Time-Resolved Absorption Spectroscopy</i>	167
8.3	Spectral and Structural Identity of LHCII Xanthophylls	170
8.4	Plasticity of Light Harvesting Antenna Design: Tailoring the Structure to Optimize the Function	176
8.5	LHCII Oligomerization: Dynamics of the 'Programmed Solvent'	179
8.5.1	<i>Alterations in the Spectral Properties of LHCII</i>	179
8.5.2	<i>Structural Changes within LHCII</i>	183
8.6	Kinetics of the Collective LHCII Transition into the Dissipative State: Exploring 'The Switch' Control	189
	References	194
	Bibliography	195
9	Adaptations of the Photosynthetic Membrane to Light	197
9.1	The Need for Light Adaptations and their Various Strategies	198
9.2	Long-Term Regulation of the Photosystem Ratio and their Antenna Size: Acclimation	201

9.3	Short-Term Adaptations to Light Quality: State Transitions	202
9.3.1	<i>The Phenomenology of State Transitions</i>	202
9.3.2	<i>The Molecular Mechanism of State Transitions</i>	205
9.3.3	<i>Chromatic Adaptations in Plants Lacking the Polypeptides of the Major LHC II Complex</i>	209
9.3.4	<i>Future of State Transitions Research</i>	212
9.4	Short-Term Adaptations to Light Quantity	214
9.4.1	<i>Control of Excess Light Energy in Photosystem II – The Phenomenon of Nonphotochemical Chlorophyll Fluorescence Quenching (NPQ)</i>	214
9.4.2	<i>The Molecular Components and Processes Involved in NPQ</i>	217
9.4.3	<i>Future of qE Research</i>	238
	References	238
	Bibliography	239
10	What is in it for Plant, Biosphere and Mankind?	241
10.1	Science and Society	241
10.2	Energy Balance of Photosynthesis: A Wasteful Process?	242
10.3	Crops and Light Harvesting	247
10.4	Light Harvesting Principles for Future Applications: Liberation from Saturation Constraints	249
10.5	Effects of Changing Climate – The Onset of Disorder	253
	Bibliography	254
11	Conclusions	257
	Index	261
