<i>List of figures</i>	xi
<i>List of tables</i>	xv
<i>Profiles</i>	xvi
<i>Preface</i>	xvii
1 Introduction	1
<i>A brief history of evolutionary ideas</i>	3
<i>The organization of the book</i>	11
<i>Chapter summary</i>	14
<i>Chapter discussion</i>	14
2 Background: concepts of evolution and genetics	16
<i>Introduction</i>	16
<i>Genetics and microevolution</i>	28
<i>The chemical basis of life</i>	28
<i>Genetics</i>	37
<i>Microevolution</i>	47
<i>The synthetic theory of evolution</i>	53
<i>Chapter summary</i>	54
<i>Chapter discussion</i>	54
3 Molecular genetics, genomics, and human genetics	57
<i>A closer look at chromosomes</i>	57
<i>Extrachromosomal genetics</i>	65
<i>Tracing genetic variability and function</i>	70
<i>Human genetics and the human genome</i>	74
<i>Chapter summary</i>	78
<i>Chapter discussion</i>	79
4 Macroevolution and taxonomy	82
<i>Taxonomy</i>	82
<i>Macroevolution</i>	91

Chapter summary	110
Chapter discussion	111
5 Race and human variation	114
Race	114
Phenotypic characteristics of human variability	126
"Race" and intelligence	143
Patterns of human variability	147
Chapter summary	147
Chapter discussion	148
6 Human biological variation in the skeleton and dentition: a window on the past	152
Introduction to skeletal biology	152
Paleodemography	160
Individual and population differences in the skeleton	161
Trace elements in bony tissue	168
Forensic anthropology	169
Paleopathology	173
Ethical concerns	175
Chapter summary	176
Chapter discussion	176
7 Genotypic traits	181
Genotypic traits traditionally used in human biology	181
Genetic traits from contemporary molecular biology used in human biology	195
Chapter summary	202
Chapter discussion	203
8 Tracing human population affinities and migrations	207
Tracing the origins of modern <i>Homo sapiens</i>	207
Tracing the movements of modern <i>Homo sapiens</i>	211
Conclusion	226
Chapter summary	227
Chapter discussion	227
9 Demography: populations, reproduction, and mortality	235
Population ecology	235
Demography of human populations	241
Human population growth	252
Chapter summary	258
Chapter discussion	259

10 Life span: growth and development	262
<i>The general pattern of human growth</i>	262
<i>Growth of specific body parts</i>	271
<i>Growth after birth: population differences</i>	277
<i>Growth and development: a final consideration</i>	283
<i>Chapter summary</i>	284
<i>Chapter discussion</i>	284
11 Life span: aging and senescence	289
<i>The biology of senescence</i>	289
<i>Theories of senescence</i>	297
<i>The human population biology of senescence</i>	303
<i>Can we "cure" senescence?</i>	311
<i>Conclusion</i>	314
<i>Chapter summary</i>	314
<i>Chapter discussion</i>	314
12 Human adaptability to physical stressors	322
<i>Limiting factors, tolerance, and environmental physiology</i>	322
<i>Adaptation to cold and heat</i>	328
<i>Adaptation to high altitude</i>	341
<i>High activity levels</i>	346
<i>Conclusion</i>	349
<i>Chapter summary</i>	349
<i>Chapter discussion</i>	350
13 Human adaptability to biological stressors	354
<i>Malnutrition</i>	354
<i>Protein-calorie malnutrition</i>	355
<i>Micronutrient deficiencies</i>	361
<i>Overnutrition and conclusion</i>	366
<i>Infectious disease</i>	368
<i>The impact of biological stressors on human biology</i>	380
<i>Chapter summary</i>	381
<i>Chapter discussion</i>	382
14 Human biology in the modern world	387
<i>General stress</i>	387
<i>Adiposity and obesity: are we eating ourselves to death?</i>	395
<i>Pollution: the fouling of the environment</i>	401
<i>Possible reduced selective forces</i>	406
<i>Conclusion</i>	412
<i>Chapter summary</i>	412
<i>Chapter discussion</i>	413

15 Human biological variation: a look to the future and some final thoughts on ethics	420
<i>Human biology in the future</i>	420
<i>Final thoughts on the ethics of human biology research</i>	425
<i>What is normal?</i>	429
<i>Chapter summary</i>	431
<i>Chapter discussion</i>	432
 Glossary	 433
Index	451
