Author.....	xxxix

Section I Introduction

1. Introduction	3
1.1 Introduction.....	3
1.2 Science and Engineering	3
1.2.1 Phylogeny	3
1.2.2 Motivation	4
1.2.3 Methods	5
1.2.4 Synthesis	8
1.3 Scientific Method	9
1.4 Mathematical Modeling.....	14
1.4.1 The Value of Models	14
1.4.2 Types of Models.....	16
1.4.3 Steps in the Modeling Process.....	17
1.4.4 Models and Empirical Observations	19
1.5 Biological Engineering	22
1.6 Expectations for Biological Engineers	24
1.7 About Predictions	27
1.8 About This Book	30
Questions	32

Section II Principles from the Sciences

2. Principles of Physics	37
2.1 Effort and Flow Variables	39
2.1.1 Resistance	40
2.1.2 Capacity	41
2.1.3 Inertia.....	41
2.1.4 Efforts Required	42

2.2	Balances	44
2.3	States of Matter	48
2.3.1	Gases	48
2.3.2	Liquids	49
2.3.3	Solids	50
2.3.4	Gas Plasma	51
2.3.5	Phase Changes	51
2.4	Equivalence of Work and Energy	52
2.4.1	Work	52
2.4.2	Energy	54
2.4.3	Efficiency	56
2.5	Free Energy	59
2.5.1	Internal Energy	60
2.5.2	Enthalpy	60
2.5.3	Entropy	61
2.5.4	Gibbs Free Energy	61
2.6	Disorder and Entropy	63
2.7	Heat Transfer	65
2.8	Movement of Materials	68
2.8.1	Convection and Diffusion	68
2.8.2	Osmosis	72
2.9	Fluid Mechanics	76
2.9.1	Viscosity	77
2.9.2	Fluid Movement	77
2.9.3	Fluid Energy	80
2.9.4	Circulatory System	82
2.9.5	Static Pressure	83
2.10	Solid Mechanics	87
2.10.1	Inertia	87
2.10.2	Acceleration	88
2.10.3	Reaction Forces	89
2.10.4	Stress	92
2.11	Electricity	96
2.11.1	Electrostatics	96
2.11.2	Electrical Current	98
2.11.3	Electrical Power	101
2.12	Temperature Effects	104
	Questions	106
3.	Principles of Chemistry	111
3.1	Periodic Nature of Elements	112
3.2	Chemical Bonding	119
3.2.1	Ionic Bonds	120
3.2.2	Covalent Bonds	122
3.2.3	Electronegativity	122
3.2.4	Water as a Polar Molecule	123
3.2.5	Hydrogen Bonds	124
3.2.6	van der Waals Forces	126

3.3	Chemical Equilibrium.....	130
3.4	Acids and Bases.....	132
3.4.1	Strong and Weak Acids and Bases.....	132
3.4.2	Salts.....	133
3.4.3	pH.....	134
3.5	Reaction Rates.....	136
3.5.1	Collision Theory.....	136
3.5.2	Intermediate Reactions.....	136
3.5.3	First-Order Reactions.....	138
3.5.4	Enzyme-Substrate Reactions.....	138
3.6	Carbon Chemistry.....	140
3.6.1	Many Possible Configurations.....	140
3.6.2	Functional Groups.....	144
3.6.3	Amino Acids.....	144
3.6.4	Macromolecule Types.....	145
3.6.5	Polymers.....	148
3.6.6	Melting and Boiling Points.....	148
3.6.7	Organic Reactions.....	148
3.7	Physical Chemistry in Water.....	154
3.7.1	Solutions.....	154
3.7.2	Gels.....	158
3.7.3	Suspensions.....	163
3.7.4	Isoelectric Point.....	163
3.8	Protein Folding.....	165
3.9	Shape Effects and Enzymes.....	171
3.10	Energy-Rich Compounds.....	176
3.11	Temperature and Pressure Effects.....	186
3.12	Free Energy.....	188
	Questions.....	191
4.	Principles of Mathematics and Engineering Sciences.....	197
4.1	Equality.....	198
4.2	Randomness and Probability.....	204
4.2.1	Probability Distributions.....	205
4.2.2	Self-Similar Data.....	209
4.2.3	Pseudorandom Data.....	209
4.2.4	Statistics.....	211
4.3	Calculus.....	224
4.3.1	Derivatives and Differential Equations.....	224
4.3.2	First-Order Equations.....	225
4.3.3	Exponential Responses.....	225
4.3.4	Second-Order Equations.....	227
4.3.5	Periodicity.....	227
4.3.6	Nonlinear and Nonconstant Equations.....	229
4.3.7	Integration.....	230
4.4	Control Systems.....	234
4.4.1	Sensors.....	234
4.4.2	Actuators.....	238

4.4.3	Communications	240
4.4.4	Closed-Loop Feedback Systems.....	251
4.4.5	Open-Loop Systems.....	253
4.4.6	Closed-Loop Feedforward Systems.....	255
4.4.7	Adaptive Control Systems	256
4.4.8	Fuzzy Control Systems	256
4.5	Optimization	257
4.6	Information.....	259
4.7	Analog and Digital Signal Processing	264
	Questions	266
5.	Principles of Biology.....	271
5.1	Form and Function	273
5.2	Modularity and Incremental Change	276
5.3	Genetic Basis	282
5.3.1	DNA as the Blueprint	282
5.3.2	RNA as the Fabricator.....	285
5.3.3	Gene Types	289
5.3.4	Genetic Expression.....	291
5.3.5	Epigenetics	299
5.3.6	RNA Interference.....	300
5.3.7	Antisense Molecules and Omics	301
5.3.8	Genetic Variation.....	301
5.3.9	Replication.....	303
5.3.10	Mutations.....	304
5.3.11	RNA Correcting DNA.....	310
5.3.12	Mitochondrial and Chloroplast DNA	310
5.3.13	Plasmid DNA	312
5.4	Competition and Selection	316
5.5	Biological Hierarchies	326
5.5.1	The Cell.....	327
5.5.2	What Is Life?	332
5.5.3	Synthetic Biology.....	334
5.5.4	Ecology on Micro- and Macroscales	336
5.5.5	Food Pyramid	337
5.6	Is Biology Complex or Simple?.....	341
	Questions	348

Section III Responses of Living Systems

6.	Biological Responses in Context	353
6.1	Biological Units Need Water	355
6.1.1	Water Has Unique Properties	356
6.1.2	Water Surrounding Biological Units.....	356
6.1.3	Water Balance.....	357
6.1.4	Biological Units Barriers to Water Movement.....	357

6.2	Biological Units Need the Right Amount of Oxygen.....	360
6.2.1	Anaerobes and Facultative Anaerobes.....	360
6.2.2	Oxidative Metabolism.....	360
6.2.3	Oxygen Delivery.....	360
6.2.4	Too Much Oxygen.....	361
6.3	Biological Units Need Food and Nutrients.....	363
6.3.1	Essential Elements.....	364
6.3.2	Food and Nutrients for Energy and Essential Biochemicals.....	367
6.3.3	Microbes Assist Digestion.....	369
6.3.4	Synthetic Growth Media.....	370
6.4	Biological Units Become Ill in the Presence of Wastes.....	372
6.5	Biological Units Need Heat Sources and Sinks.....	376
6.5.1	Heat Sources.....	376
6.5.2	Removing Excess Heat.....	377
6.5.3	Moving to a Better Neighborhood.....	378
6.5.4	The Best Thermal Conditions.....	379
6.5.5	Too Hot.....	380
6.5.6	Too Cold.....	381
6.6	Biological Units Adapt to Their Environments.....	383
6.6.1	Cells and Microbes.....	385
6.6.2	Hypertension.....	386
6.6.3	Color Changes.....	386
6.6.4	Adaptations to Light.....	387
6.6.5	Other Adaptations.....	387
6.7	Biological Units Modify Their Environments.....	394
6.8	Adaptations Require Extra Energy and Resources.....	398
6.9	Biological Units, If Possible, Move to Friendlier Environments.....	400
6.10	Biological Units Evolve under Environmental Pressures.....	405
6.11	Crowding of Biological Units Produces Stress.....	411
6.11.1	Antisocial Behavior.....	412
6.11.2	Crowding in Humans.....	412
6.11.3	Personal Space.....	413
6.11.4	Sensory Overload.....	415
6.11.5	Animal Spaces and Animal Welfare.....	416
6.11.6	Crowding and Disease.....	417
6.11.7	Densities in the Wild.....	418
6.12	Biological Units Are Affected by Chemical Stresses.....	420
6.12.1	Toxicity.....	420
6.12.2	Dose-Response.....	422
6.12.3	High Doses.....	424
6.12.4	Metabolic Wastes.....	425
6.12.5	Nanoparticles.....	426
6.12.6	Toxins Used as Defenses.....	427
6.12.7	Toxin Tolerances.....	429
6.12.8	Toxin Concentration.....	434
6.12.9	Endocrine Disruption.....	436

6.13	Biological Units Respond to Mechanical Stresses.....	439
6.13.1	Sedimentation and Clotting.....	439
6.13.2	Strengthening and Stiffening.....	441
6.13.3	Critical Shear Stress.....	442
6.13.4	Stem Cell Substrates.....	443
6.13.5	Whole Plant Responses	444
6.13.6	Bodies in Motion	446
6.14	Optimization Is Used to Save Energy and Nutrient Resources.....	451
6.14.1	Reproductive Advantage	451
6.14.2	Locomotion	452
6.14.3	Breathing and Heart Rate.....	455
6.14.4	Genetic Variability.....	456
6.14.5	Ecological Optimization.....	457
6.14.6	Mode of Action	458
6.15	Biological Units Alter Themselves to Protect against Harsh Environments	461
6.15.1	Torpor, Hibernation, and Estivation.....	461
6.15.2	Endospores.....	463
6.15.3	Seeds and Spores.....	465
6.15.4	Plant Responses.....	466
6.15.5	Response to Hemorrhage.....	467
6.15.6	Psychological Trauma.....	467
6.16	Biological Units Cooperate with Other Biological Units.....	468
6.16.1	Symbiosis.....	469
6.16.2	Coevolution.....	473
6.16.3	Plant Reproduction	474
6.16.4	Communal Benefit	477
6.16.5	Inadvertent Benefit	482
6.17	Biological Units Compete with Other Biological Units.....	485
6.17.1	Plants and Herbivores	485
6.17.2	Predators.....	486
6.17.3	Parasites.....	488
6.17.4	Pathogens	489
6.18	Biological Units Reproduce	494
6.18.1	Asexual Reproduction.....	494
6.18.2	Exchange of Bacterial Genes.....	494
6.18.3	Somatic Cell Reproduction	495
6.18.4	Telomeres.....	497
6.18.5	Sexual Reproduction.....	500
6.18.6	Courtship.....	503
6.18.7	External or Internal Fertilization.....	505
6.18.8	Hermaphrodites	506
6.18.9	Plant Reproduction	507
6.19	Biological Units Coordinate Activities through Communication	509
6.19.1	Acoustic Stimuli	510
6.19.2	Chemical Stimuli	515
6.19.3	Touch Stimuli	522

6.19.4	Visual Stimuli.....	524
6.19.5	Others.....	529
6.19.6	Just Noticeable Difference.....	532
6.20	Biological Units Maintain Stability with Exquisite Control	534
6.20.1	The Senses	534
6.20.2	Controllers.....	538
6.20.3	Redundancy	540
6.20.4	Antagonistic Action	549
6.20.5	Dead Zone	554
6.20.6	Time Delays.....	555
6.20.7	Working with Biological Control	555
6.21	Biological Units Go Through Natural Cycles	560
6.21.1	Regeneration	561
6.21.2	Maturation.....	562
6.21.3	Senescence	564
6.21.4	Death	567
6.21.5	Annual Cycles.....	567
6.21.6	Monthly Cycles.....	570
6.21.7	Diurnal Cycles	571
6.21.8	Cycles Shorter than a Day.....	576
6.21.9	Asynchronous Nutrient Cycles.....	576
6.22	Biological Units Need Emotional Satisfaction and Intellectual Stimulation	581
6.22.1	The Nature of Emotions	581
6.22.2	Personality.....	586
6.22.3	Neurotransmitters	588
6.22.4	Interpersonal Interactions	589
6.22.5	Brain Development and Learning	592
6.22.6	Psychological Hierarchy.....	598
6.22.7	Social Infrastructure	603
6.22.8	Mind-Body Interactions.....	606
6.23	Biological Units Die	615
6.23.1	What Does "Dead" Mean?	615
6.23.2	Reliability Theory and Death Rates	618
6.23.3	Is There a Natural Limit to Life Span?	622
	Questions	624

Section IV Scaling Factors

7.	Allometric Relationships	639
7.1	Allometric Relationships from Evolutionary Pressure	639
7.2	Dimensional Analysis	641
7.3	Golden Ratio	642
7.4	Fractal Scaling within an Organism	644
7.4.1	Body Mass	645
7.4.2	Body Surface Area.....	646

7.4.3	Body Dimensions	647
7.4.4	Metabolic Rate and Related Temperatures	651
7.4.5	Oxygen Consumption	653
7.4.6	Heat Loss	654
7.4.7	Cardiovascular Factors	655
7.4.8	Respiration	660
7.4.9	Walking and Running	665
7.4.10	Relations Involving Time	670
7.4.11	Food and Waste	672
7.4.12	Bird Songs	674
7.4.13	Plant Growth	674
7.5	Self-Similarity for Tissues and Organs	682
7.5.1	Organs	682
7.5.2	Tissues	684
7.6	Self-Similarity in Populations	685
7.6.1	Number of Species	685
7.6.2	Species Range	686
7.6.3	Population Densities	687
7.6.4	Population Doubling Time	690
	Questions	692

Section V Utilizing Living Systems

8.	Biological Engineering Solutions	697
8.1	Systems Approach	697
8.2	Relationships between Engineering and Biology	700
8.2.1	Living Things as the Solution (Bionics, or Hybrid Systems)	701
8.2.2	Living Things as Models (Biomimetics)	708
8.2.3	Biological Solutions to Biological Problems (Biotechnology)	715
8.2.4	Living Things as Recipients (Biomedical Engineering)	726
8.2.5	Living Things Inadvertently Affected	736
8.3	The Completed Design	742
8.4	Dénouement	748
	Questions	749
	Appendix	753
	References	851
	Index	879
