The 'People and Plants' Initiative	<i>Alan Hamilton</i>	x
International Panel of Advisers		xii
Internal Panel of Advisers		xiv
Foreword	<i>Professor G. T. Prance</i>	xvi
Preface		xvii
Introduction		xx
1 Data collection and hypothesis testing		1
1.1 Choosing an approach		2
1.2 Six disciplines which contribute to an ethnobotanical study		3
1.3 Rapid ethnobotanical appraisal		3
1.4 Planning a long-term project		7
1.5 Describing the field site		8
1.6 Ethnobotanical data		10
1.7 Visual aids		18
1.8 The law of diminishing returns		19
1.9 Hypothesis testing and theory		23
2 Botany		27
2.1 Collecting and identifying plants		28
2.2 Preparing an ethnobotanical reference collection		59
2.3 Herbaria and the curation of plant specimens		59
2.4 Judging the completeness of a plant survey		61
3 Ethnopharmacology and related fields		67
3.1 Proceeding with a phytochemical analysis		68
3.2 Screening		77

3.3	Collecting plants for phytochemical analysis	81
3.4	The ethics of searching for new plant products	89
3.5	Bringing phytochemistry back home	91
4	Anthropology	95
4.1	Talking with local people	96
4.2	Searching for ethnobotanical information in folklore	112
4.3	Surveys and analytical tools	116
5	Ecology	137
5.1	Describing microenvironments and quantifying their plant resources	138
5.2	Qualitative approaches	138
5.3	Bridging the gap between qualitative and quantitative approaches	155
5.4	Quantitative approaches	155
6	Economics	171
6.1	Economics and ethnobotany	172
6.2	The value of the environment	172
6.3	The value of forest products	173
6.4	Surveys of community and household economy	183
6.5	Local markets	191
7	Linguistics	201
7.1	Learning a local language	202
7.2	Collaborating with linguists	202
7.3	Where there is no linguist	203
7.4	Transcribing the local language	204
7.5	Linguistic analysis in ethnobotany	205
7.6	Free listing	213
7.7	Systematic surveys of local plant knowledge	215
7.8	Categories of ethnobiological classification	215
7.9	The correspondence between folk and scientific classification	218

8 Ethnobotany, conservation and community development	223
8.1 Applying traditional ecological knowledge	224
8.2 Ethnobotanical research and community development	224
8.3 Forests	225
8.4 Conservation of wild crop relatives and endangered useful plants	228
8.5 Education	231
8.6 Use of protected areas	234
8.7 The local perspective on ethnobotanical research	239
8.8 The path ahead	251
References	253
Further reading	261
Index	263
