

CONTENTS

Preface		xiii
Abbreviations		xv
Chapter 1	Water, pH and Buffers	1
Chapter 2	Protein Structure and Properties	13
Chapter 3	Chromatography and the Strategy of Protein Purification	31
Chapter 4	The Groundwork	59
Chapter 5	Non-Affinity Absorption Techniques Used to Purify Proteins	119
Chapter 6	Affinity-Based Procedures Used to Purify Proteins	145
Chapter 7	Non-Absorption Techniques for Purifying Proteins	177
Chapter 8	Methods for Monitoring the Purity of Protein Solutions	193
Appendix 1	The Laws of Thermodynamics and the Gibbs Free Energy Equation	231
Appendix 2	Properties of Amino Acids	233
Appendix 3	The Common Units Used in Biology	235
Appendix 4	Chromatographic Runs	237
Appendix 5	Determining the Concentration of a Compound in a Solution in PPM	239
Appendix 6	The Answers to the Exercises in the Various Chapters	241

Appendix 7	An Alphabetical List of Chromatography (C), Electrophoresis (E), Filtration Equipment (F) and Laboratory Suppliers (LS)	245
Appendix 8	Buffer Tables to Prepare Buffers at a Required pH Value	249
Glossary of Terms		253
Index		261

DETAILED CONTENTS

Preface	xiii	2.7 THE CHARACTERISTICS OF A PROTEIN WHICH CAN BE EXPLOITED TO PURIFY A TARGET PROTEIN	26
Abbreviations	xv	2.7.1 Surface charge	26
Chapter 1 Water, pH and Buffers	1	2.7.2 Hydrophobic nature	27
1.1 INTRODUCTION	1	2.7.3 Solubility	27
1.2 THE STRUCTURE OF WATER	2	2.7.4 Biospecificity	28
1.3 WATER AS A SOLVENT	3	2.7.5 Molecular mass (M_r)	28
1.4 THE IONISATION OF WATER	5	2.7.6 Post-translational modifications	28
1.5 THE pH SCALE	6	2.7.7 Engineering proteins to aid purification	28
1.6 ACIDS AND BASES	7	2.8 A RANGE OF TECHNIQUES THAT CAN BE USED IN PROTEIN PURIFICATION	29
1.7 BUFFERS	8	2.8.1 Surface charge	29
1.7.1 Points to remember about buffers	9	2.8.2 Hydrophobicity	29
1.8 SUMMARY	10	2.8.3 Biospecificity	29
EXERCISE 1.1	10	2.8.4 Molecular mass	29
RECOMMENDED READING	11	2.9 SUMMARY	29
Research papers	11	RECOMMENDED READING	30
Books	11	Research papers	30
Chapter 2 Protein Structure and Properties	13	Books	30
2.1 INTRODUCTION	13	Chapter 3 Chromatography and the Strategy of Protein Purification	31
2.2 AMINO ACIDS	13	3.1 INTRODUCTION	31
2.3 THE PEPTIDE BOND	19	3.2 CHROMATOGRAPHY	31
2.4 OVERVIEW OF PROTEIN STRUCTURE	21	3.3 THE THEORIES OF CHROMATOGRAPHY	32
2.4.1 Primary structure	21	3.3.1 The plate theory of chromatography	32
2.4.2 Secondary structure	21	3.3.2 The rate theory of chromatography	33
2.4.3 Tertiary structure	22	3.4 PARAMETERS IN CHROMATOGRAPHY	34
2.4.4 Quaternary structure	24	3.5 THE STRATEGY OF PROTEIN PURIFICATION	35
2.5 MOTIFS AND DOMAINS (SUPER SECONDARY STRUCTURE)	25	3.5.1 Introduction	35
2.6 POST-TRANSLATIONAL MODIFICATIONS	25	3.5.2 Strategy	38
		3.5.3 The process of protein purification	39

3.6 THE EQUIPMENT REQUIRED FOR PROTEIN PURIFICATION	44	4.4.1 Introduction	65
3.6.1 Columns	45	4.4.2 Reducing agents	66
3.6.2 Tubing	46	4.4.3 Chelating agents	67
3.6.3 Pumps	46	4.4.4 Enzyme substrates/Inhibitors/Activators/Cofactors	68
3.6.4 Fraction collectors	46	4.4.5 Inhibitors of peptidase enzymes	68
3.6.5 Detectors	47	4.4.6 Phosphatase inhibitors	69
3.6.6 Gradient makers	47	4.4.7 Removal of nucleic acids and nucleoproteins	70
3.6.7 Different elution procedures	47	4.4.8 Removal of lipoproteins	70
3.6.8 Regeneration and storage of chromatographic resins (media)	50	4.4.9 Additions for the extraction of plant tissue	70
3.7 AUTOMATED PROTEIN PURIFICATION CHROMATOGRAPHY SYSTEMS	51	4.4.10 Additions for the extraction of membrane proteins	71
3.8 SIMULATED MOVING BED CHROMATOGRAPHY (SMBC)	52	4.5 TECHNIQUES USED TO DISRUPT TISSUE OR CELLS	74
3.9 PROTEIN PURIFICATION CHROMATOGRAPHIC RUNS	52	4.5.1 Animal cells or tissue	74
3.9.1 Pre-packed chromatographic columns	52	4.5.2 Plant cells (typically 100 µm in diameter)	75
3.9.2 Empty chromatography columns	53	4.5.3 Bacterial cells (0.7–4.0 µm in diameter)	75
3.9.3 Flow rates and elution of the sample	54	4.5.4 Fungal cells	76
3.10 SCALING UP THE PURIFICATION AND SOME CONSIDERATIONS ABOUT INDUSTRIAL PROTEIN PURIFICATION	55	4.6 THE EXTRACTION METHODS USED WITH SMALL AMOUNTS OF TISSUE OR CELLS	76
3.11 SUMMARY	55	4.6.1 Liquid nitrogen	76
PROTOCOL FOR CHAPTER 3	56	4.6.2 Acid washed sand	76
Protocol 3.1 The preparation of a sample and buffers for a protein purification chromatographic run using an automated protein purification system	56	4.6.3 Osmotic shock	76
RECOMMENDED READING	57	4.6.4 Homogenisers/Tissue grinders	76
Research papers	57	4.6.5 Sonicators	77
Books	57	4.7 EXTRACTION METHODS FOR LARGE AMOUNTS OF ANIMAL/PLANT TISSUE OR CELLS	77
Chapter 4 The Groundwork	59	4.7.1 Blenders	77
4.1 INTRODUCTION	59	4.7.2 Blenders with beads	78
4.2 ASSAY TO IDENTIFY A TARGET PROTEIN	59	4.7.3 Ultra-Turrax/Polytron homogenisers	78
4.2.1 Temperature	60	4.8 THE EXTRACTION METHODS USED WITH BACTERIAL OR YEAST CELLS	79
4.2.2 Substrate concentration	61	4.8.1 Abrasive materials	79
4.2.3 pH	63	4.8.2 Compression/Expansion	79
4.3 PROTEIN ASSAYS	63	4.8.3 Freezing and thawing	79
4.4 THE EXTRACTION OF PROTEIN FROM CELLS OR TISSUE	65	4.8.4 Enzyme treatment	80
		4.9 POINTS TO REMEMBER ABOUT EXTRACTION PROCEDURES	80
		4.10 THE TECHNIQUES USED TO CLARIFY HOMOGENISED EXTRACTS	81
		4.10.1 Centrifugation	81
		4.10.2 Aqueous two-phase partitioning	86

4.11 THE TECHNIQUES THAT CAN BE USED TO CONCENTRATE PROTEINS FROM DILUTE SOLUTIONS (LABORATORY SCALE)	87	Protocol 4.9 Preparation of dialysis tubing	114
4.11.1 Salt precipitation	88	Protocol 4.10 Precipitation of protein from a small volume (0.1–5.0 ml) using acetone	115
4.11.2 Organic solvent precipitation	92	RECOMMENDED READING	116
4.11.3 Polymer precipitation	92	Research papers	116
4.11.4 Aqueous two-phase partitioning	92	Books	117
4.11.5 Isoelectric precipitation	92		
4.11.6 Chromatography	93		
4.11.7 Hygroscopic material	93		
4.11.8 Dried acrylamide	93		
4.11.9 Lyophilisation (freeze drying)	93		
4.11.10 Ultrafiltration	95		
4.12 CLARIFICATION OF PROCESS SCALE EXTRACTS	98		
4.12.1 Process scale centrifugation	98		
4.12.2 Stirred bed	99		
4.12.3 Fluidised bed	99		
4.12.4 Expanded bed	100		
4.13 MEMBRANE CHROMATOGRAPHY	101		
4.14 THE STORAGE OF PROTEIN SAMPLES	101		
4.15 SUMMARY	102		
EXERCISE 4.1	103		
PROTOCOLS FOR CHAPTER 4	104		
Protocol 4.1 The measurement of protein concentration using the absorbance of light at 280 nm	104		
Protocol 4.2 Bicinichininic acid (BCA) protein assay (0–1.0 mg ml⁻¹)	105		
Protocol 4.3 Bicinichoninic acid (BCA) protein assay (0.5–10 µg ml⁻¹)	107		
Protocol 4.4 Coomassie blue dye binding protein assay	108		
Protocol 4.5 Azocasein assay to determine the peptidase profile in crude extracts	109		
Protocol 4.6 Extraction of plant tissue material using a blender and concentration using ammonium sulphate	110		
Protocol 4.7 Extraction of animal tissue material using a Potter–Elvehjem homogeniser	111		
Protocol 4.8 The total (a) and fractional (b) precipitation of protein by ammonium sulphate	113		
		Chapter 5 Non-Affinity Absorption Techniques Used to Purify Proteins	119
		5.1 INTRODUCTION	119
		5.2 ION EXCHANGE (IEX) CHROMATOGRAPHY	120
		5.2.1 Ion exchange resins	121
		5.2.2 Binding and elution of protein to IEX resins	122
		5.2.3 Regeneration and storage of IEX resins	126
		5.3 CHROMATOFOCUSING	126
		5.4 HYDROXYAPATITE (HA) CHROMATOGRAPHY	127
		5.5 HYDROPHOBIC INTERACTION CHROMATOGRAPHY (HIC)	128
		5.5.1 The binding and elution conditions for HIC	130
		5.5.2 The regeneration and storage of HIC resins	132
		5.6 HYDROPHOBIC CHARGE INDUCTION CHROMATOGRAPHY (HCIC)	132
		5.7 INTRODUCTION TO MIXED MODE (MULTIMODAL) CHROMATOGRAPHY (MMC)	133
		5.7.1 Capto™ MMC (GE Healthcare)	134
		5.7.2 Mercapto-benzimidazole sulfonic acid (MBI)	135
		5.7.3 Nuvia cPrime (Bio-Rad)	135
		5.8 SUMMARY	136
		PROTOCOLS FOR CHAPTER 5	137
		Protocol 5.1 Small-scale screening experiment to establish the appropriate binding and elution conditions for chromatographic resins	137
		Protocol 5.2 The purification of calcium-dependent proteins using hydrophobic interaction chromatography (HIC)	139

Protocol 5.3 The affinity elution (displacement) of enzymes from an ion exchange column 141

RECOMMENDED READING 144

Research papers 144
Books 144

Chapter 6 Affinity-Based Procedures Used to Purify Proteins 145

6.1 INTRODUCTION TO AFFINITY CHROMATOGRAPHY 145

6.2 THE RESINS USED IN AFFINITY CHROMATOGRAPHY 146

6.3 THE AFFINITY LIGAND 147

6.4 THE BINDING AND ELUTION CONDITIONS FOR AFFINITY CHROMATOGRAPHY 149

6.5 THE REGENERATION AND STORAGE OF AFFINITY RESINS 152

6.6 GROUP-SPECIFIC LIGANDS 153

6.7 COVALENT CHROMATOGRAPHY 153

6.7.1 Introduction to covalent chromatography 153

6.7.2 The binding and elution conditions for covalent chromatography 154

6.7.3 The regeneration and storage of covalent chromatography resins 155

6.8 DYE LIGAND AFFINITY CHROMATOGRAPHY 155

6.9 IMMUNOAFFINITY CHROMATOGRAPHY 156

6.9.1 Introduction to immunoaffinity chromatography 156

6.9.2 The binding and elution conditions for immunoaffinity resins 158

6.9.3 Regeneration and storage of immunoaffinity resins 159

6.10 LECTIN AFFINITY CHROMATOGRAPHY 160

6.10.1 Introduction to lectin affinity chromatography 160

6.10.2 The binding and elution conditions for lectin affinity chromatography 161

6.10.3 Regeneration and storage of lectin resins 161

6.11 IMMOBILISED METAL (ION) AFFINITY CHROMATOGRAPHY (IMAC) 162

6.11.1 Introduction to immobilised metal affinity chromatography 162

6.11.2 The binding and elution conditions for IMAC 163

6.11.3 The regeneration and storage of IMAC resins 165

6.12 THE PURIFICATION OF RECOMBINANT PROTEINS 165

6.12.1 Introduction to the purification of recombinant proteins 165

6.12.2 The use of IMAC to purify recombinant proteins 166

6.12.3 The use of fusion proteins to purify recombinant proteins 168

6.13 AFFINITY PARTITIONING (PRECIPITATION) 169

6.14 SUMMARY 170

PROTOCOLS FOR CHAPTER 6 171

Protocol 6.1 Purification of IgG using protein A agarose 171

Protocol 6.2 Purification of anti-transglutaminase 2 (TG2) monoclonal antibody ID10 (NTU) from a monoclonal cell culture supernatant using cation exchange chromatography 173

RECOMMENDED READING 175

Research papers 175
Books 175

Chapter 7 Non-Absorption Techniques for Purifying Proteins 177

7.1 INTRODUCTION TO SIZE EXCLUSION CHROMATOGRAPHY (SEC) 177

7.2 THE THEORY OF SIZE EXCLUSION CHROMATOGRAPHY 178

7.3 FACTORS TO CONSIDER IN SIZE EXCLUSION CHROMATOGRAPHY 182

7.3.1 The resin 182

7.3.2 The bead size of the resin 182

7.3.3 The flow rate 182

7.3.4 The size of the sample 182

7.3.5 The sample viscosity 182

7.3.6 The composition of the buffer 183

7.4 SIZE EXCLUSION MEDIA PREPARATION AND STORAGE	183	8.4.2 Gel homogenisation	205
7.5 APPLICATIONS OF SIZE EXCLUSION CHROMATOGRAPHY	183	8.4.3 Gel solubilisation	205
7.5.1 Analytical SEC	183	8.5 INTRODUCTION TO WESTERN BLOTTING	205
7.5.2 Separation of aggregates or removal of low amounts of contaminating material by size exclusion chromatography	185	8.5.1 Recovery of proteins from nitrocellulose	207
7.5.3 Desalting (group separation)	186	8.6 INTRODUCTION TO ISOELECTRIC FOCUSING	207
7.5.4 Refolding of denatured proteins	186	8.6.1 Preparative isoelectric focusing (IEF)	209
7.6 DYNAMIC LIGHT SCATTERING	186	8.7 INTRODUCTION TO CAPILLARY ELECTROPHORESIS (CE)	209
7.7 SUMMARY	187	8.8 INTRODUCTION TO REVERSED-PHASE HIGH-PRESSURE LIQUID CHROMATOGRAPHY OF PROTEINS	211
EXERCISE 7.1	188	8.9 SUMMARY	212
EXERCISE 7.2	188	EXERCISE 8.1	213
PROTOCOL FOR CHAPTER 7	189	EXERCISE 8.2	215
Protocol 7.1 Desalting: The exchange of buffer ions in a protein sample using size exclusion chromatography	189	PROTOCOLS FOR CHAPTER 8	216
RECOMMENDED READING	191	Protocol 8.1 The procedure and solutions for denaturing PAGE	216
Research papers	191	Protocol 8.2 The procedures and solutions to run non-denaturing PAGE	219
Books	191	Protocol 8.3 Western blotting using a semi-dry blotter *	222
Web page	191	Protocol 8.4 The preparation of enhanced chemiluminescent (ECL) reagent for developing Western blots probed with horseradish peroxidase conjugated secondary antibodies	224
Chapter 8 Methods for Monitoring the Purity of Protein Solutions	193	Protocol 8.5 Silver stain (adapted from GE Healthcare protocol) compatible with mass spectrometry	225
8.1 INTRODUCTION	193	Protocol 8.6 Fluorescent staining for polypeptides in polyacrylamides gels	226
8.2 QUALITY CONTROL: INFORMATION FOR A PROTEIN PURIFICATION BALANCE SHEET	193	Protocol 8.7 SDS-Imidazole zinc stain for polypeptides in polyacrylamide gels	227
8.3 THE THEORY OF ELECTROPHORESIS	195	Protocol 8.8 The detection of polypeptides in SDS-PAGE gels without the use of additional staining reagents	228
8.3.1 Polyacrylamide gel electrophoresis (PAGE) of proteins	197	Protocol 8.9 Homogenisation of polyacrylamide gels containing a target protein	229
8.3.2 The stacking gel	198	RECOMMENDED READING	230
8.3.3 Denaturing polyacrylamide gel electrophoresis of proteins	199	Research papers	230
8.3.4 Non-denaturing (native) polyacrylamide gel electrophoresis	201	Books	230
8.3.5 Visualising the polypeptides/Proteins in polyacrylamide gels	202		
8.4 PREPARATIVE GEL ELECTROPHORESIS AND METHODS TO ISOLATE PROTEINS FROM POLYACRYLAMIDE GELS	203		
8.4.1 Electroelution of proteins from polyacrylamide gels	205		

Appendix 1: The Laws of Thermodynamics and the Gibbs Free Energy Equation **231**

Appendix 2: Properties of Amino Acids **233**

Appendix 3: The Common Units Used in Biology **235**

Appendix 4: Chromatographic Runs **237**

Appendix 5: Determining the Concentration of a Compound in a Solution in PPM **239**

Appendix 6: The Answers to the Exercises in the Various Chapters **241**

Appendix 7: An Alphabetical List of Chromatography (C), Electrophoresis (E), Filtration Equipment (F) and Laboratory Suppliers (LS) **245**

Appendix 8: Buffer Tables to Prepare Buffers at a Required pH Value **249**
