Foreword	vii
Preface and Acknowledgements	ix
Introduction	xiii

Part I: Potential applications of microcasting

Histogenesis, structure and function of the xylem	3
Overview	3
Histogenesis, structure and function of the xylem	5
The primary xylem of Angiosperms	19
Advantage of vascular casting	19
The heterogeneous vessels	19
The branched vessels	26
The secondary xylem of Dicotyledons	53
Advantage of vascular casting	53
Formation of vessel ends	54
Occasional branching of vessels	55
The effects of constraints and cambial deformations on vascular morphology	55
Vascular junctions between adjacent axes	63
Vascular junctions between a hemiparasite and its host	65
The xylem of Pteridophytes and Gymnosperms	85
Advantage of casting of tracheids	85
The xylem of Pteridophytes	85
The xylem of Gymnosperms	87
Intercellular spaces and canals. Phloem and parenchyma	99
Advantage of casting	99
Casting in spaces and canals	99
Intracellular casting in parenchyma	100
Casting in the sieve tubes of phloem	101
Perspectives	101

Part II: The Technique of Microcasting

Introduction	111
Preparation of plant material	115
Descriptive profile	115
Planes of section	115
Treatment of the spaces to be cast	116
Obstacles to the progression of the casting agent through the tissues	117
Injection of the casting agent	119
Principle of injection	119
Degassing apparatus	119
Degassing	119
Injection	120
Duration of injection	120
Injection of coloured elastomer	124
Properties and crosslinking of the casting agent	127
Properties of silicon elastomer RTV 141	127
Practical conditions for crosslinking	128
Chemical destruction of plant tissues	131
Principle	131
Hydrolysis of polysaccharides	131
Oxidation of lignin	132
Manipulation of casts	133
Characteristics of silicone elastomer casts	133
Manipulation	133
Photography of casts	134
References	135
Index	139
