Preface

v

Chapter 1

Running water: agent of erosion, transport and redistribution of materials of the earth's crust

1

1. The water cycle 1
2. Erosion, transport and redistribution of materials 2
 - 2.1. Force of moving water 2
 - 2.2. Load limit and competence of current 4
 - 2.3. Modes of material transport 5
3. Transport in solution 6
4. Chemical characteristics of continental waters 8
5. Assessment of material transport 9

Chapter 2

General characteristics of hydrographic networks

11

1. Drainage of watersheds 11
2. Flow of water 12
 - 2.1. Flow in the substrate 12
 - 2.2. Sub-flow 13
 - 2.3. Flow in the plains 13
3. Water regime 15
 - 3.1. Nival regime 15
 - 3.2. Oceanic pluvial regime 15
 - 3.3. Mediterranean regime 17
 - 3.4. Watersheds with multiple regimes 17
4. Temperature of running waters 17
5. Correlations between parameters in running water 18

Chapter 3

Organisms and ecosystems of running water

21

1. Marine and freshwater organisms 21
2. Oceanic, lacustrine, and running-water ecosystems 22
 - 2.1. Functioning of terrestrial, oceanic, and lacustrine ecosystems 23
 - 2.2. Functioning of running-water ecosystems 24
 - 2.3. Conclusions 25

Chapter 4

Current and benthic organisms: chronic instability of the surface horizon of the substrate	27
1. Adaptation to the current	27
2. Drift of benthic organisms	30
2.1. Forms of drift	30
2.2. Floods and drift	33
2.3. Assessment of drift	33
3. Origin of superficial benthic population	36

Chapter 5

The hyporheic environment: continuity of the substrate	39
1. Hyporheic fauna of superficial origin	39
2. Stygobious fauna of subterranean origin	40
3. Distribution of fauna in the hyporheic environment	41
3.1. Origin of waters	41
3.2. Granulometry of the substrate	43
4. Origin and biogeography of stygobious fauna	46
4.1. Stygobious fauna originating from surface waters	46
4.2. Stygobia of marine origin	47
5. Conclusions	48

Chapter 6

Macrophytes of running waters: a substrate for algae and fauna	49
1. Bryophytes	49
1.1. Colonization of the substrate	49
1.2. Population of Bryophytes	50
2. Spermatophytes with rooted plant life	51
2.1. Colonization of the stream environment	52
2.2. Fauna of rooted vegetation	56

Chapter 7

Life in the water trail: plankton	59
1. Transit time and development of plankton	59
2. Modelling of phytoplankton development and seasonal successions	62
3. Conclusions	65

Chapter 8

Fish of running waters	67
1. Swimming and the water current	67
2. Distribution of fish on a longitudinal profile	69

3. Migration of fish	71
4. Geographical distribution of fish	72
5. Conclusions	75

Chapter 9

Temperature, biological cycles and distribution of organisms 77

1. Temperature and development of organisms	77
1.1. Temperature thresholds and temperature of maximum activity	77
1.2. Lethal temperatures, limits of indefinite survival and population growth rates	80
1.3. Temperature and time of development	81
2. Biological cycles: quiescence, diapause, mono- and polyvoltinism	84
2.1. Biological cycle of species with diapause	84
2.2. Biological cycles of species with quiescence	84
2.3. Conditions of life at altitudinal limits	87
2.4. Flight periods of insects that become flying adults	87
3. Conclusions: altitudinal distribution of fauna of running waters	88
3.1. Altitudinal succession in Turbellaria	89
3.2. Altitudinal succession in the Blephariceridae of the Central Pyrenees	90
3.3. Time-space successions in the Blephariceridae of Corsica	91

Chapter 10

Light, salts and dissolved oxygen: secondary ecological factors in running water 93

1. Light and organisms in running waters	93
1.1. Light and aquatic plants	93
1.2. Light and fauna	95
2. Dissolved salts	95
2.1. Electrolytes and aquatic flora	96
2.2. Electrolytes and aquatic fauna	97
3. Dissolved oxygen and fauna	97

Chapter 11

Food webs and energy flows 101

1. Allochthonous materials and their biodegradation	101
1.1. Inputs of allochthonous materials	101
1.2. Biodegradation of allochthonous matter	102
2. Autochthonous plant production	103
2.1. Phytobenthos and phytoplankton	103

x Ecology of Streams and Rivers

2.2. Upstream-downstream gradient of detritic and algal particulate carbon	105
3. Consumers	106
3.1. Invertebrates	106
3.2. Fish	110
4. Conclusions	115

Chapter 12

From upstream to downstream: ecological zonation of water courses

	117
1. Types of microhabitats	118
1.1. Falls and cascades	120
1.2. Rapids	120
1.3. Aprons	120
1.4. Flats	120
1.5. Muds	120
1.6. Channels	120
1.7. Lones	121
2. Upstream-downstream zonation	121
2.1. Crenal	122
2.2. Rhithral	123
2.3. Potamal	127
2.4. Illies and Botosaneanu's zonation and the concept of fluvial continuum	129
3. The alluvial plain and its zonation	130
3.1. The alluvial plain	131
3.2. Vegetation on the banks	131
3.3. Transfers between channels and the alluvial plain	133
3.4. The mobile littoral concept	134
4. Rivers with a Mediterranean hydrological regime	134
4.1. Settlements of permanent rivers	135
4.2. Temporary streams	135
4.3. Conclusions	137

Chapter 13

Ecological impacts of development of water courses

	139
1. The Lot: a river subject to multiple developments	139
1.1. Phytoplankton	142
1.2. Benthos	142
1.3. Fish	143
2. Ecological impacts of regulated flows on the rhithron: the Verdon	145
2.1. Benthos	146
2.2. Fish	147
3. Conclusions	148

Chapter 14

From eutrophication to trophic pollution	151
1. Eutrophication in running waters	152
1.1. Eutrophication of the Upper Aveyron	152
1.2. Eutrophication of the Lot	153
1.3. Eutrophication of the Charente	155
1.4. Eutrophication of the Vire	157
1.5. Conclusions	159
2. Trophic pollution	161
2.1. Processes of biodegradation	161
2.2. Self-purification in the rhithral	164
2.3. Self-purification in the potamal	165
3. Eutrophication and trophic pollution: two sides of the same problem	169

Chapter 15

Toxic pollution	171
1. Outline and Definitions	171
2. Toxic pollutants	171
2.1. Toxic organic pollution	172
2.2. Saline pollution	174
2.3. Chemical pollution	174
2.4. Cumulative effect micropollutants	175
2.5. Acidification of waters	177
3. Multiple pollution	178
3.1. The Riou-Mort	178
3.2. Conclusions	181

Chapter 16

Biological methods of evaluating pollution	183
1. Methods using biochemistry or ecotoxicology	183
2. Biocoenotic methods	184
2.1. Comparative analysis of communities	184
2.2. Methods based on the vicariance of species belonging to a single group	185
2.3. Methods based on a combination of benthic macro-invertebrates	187
3. Conclusions	189

Chapter 17

Conclusions	195
Bibliography	201
Index	211
