Preface.....	xi
Acknowledgments.....	xiii
About the Authors.....	xv
1. Statistical Foundations.....	1
Some Probability Concepts.....	2
Some Statistical Concepts.....	6
Key Points for Chapter 1.....	15
2. Binary Results: Single Samples and 2×2 Tables.....	17
General Ideas.....	17
Single Proportion.....	17
2×2 Tables.....	18
Examples with R Code.....	19
Single Proportion.....	19
2×2 Tables.....	20
Theoretical Aspects.....	21
Single Proportion.....	21
2×2 Tables.....	23
Key Points for Chapter 2.....	24
3. Continuous Variables.....	25
General Ideas.....	25
Examples with R Code.....	26
Theoretical Aspects.....	33
Key Points for Chapter 3.....	39
4. The Linear Model: Continuous Variables.....	41
General Ideas.....	41
Examples with R Code.....	42
Theoretical Aspects.....	52
Key Points for Chapter 4.....	58
5. The Linear Model: Discrete Regressor Variables.....	61
General Ideas.....	61
Examples with R Code.....	62
More Than One Treatment: Multiple Factors.....	67
Blocking Factors.....	70
ANOVA and Permutation Tests.....	73
Nested Factors.....	75

Analysis of Covariance: Models with Both Discrete and Continuous Regressors	76
Theoretical Aspects	78
Multiple Groupings: One-Way ANOVA	78
Key Points for Chapter 5	80
6. The Linear Model: Random Effects and Mixed Models	81
General Ideas	81
Simple Case: One Fixed and One Random Effect	82
Examples with R Code	82
More Complex Case: Multiple Fixed and Random Effects	85
Theoretical Aspects	90
Key Points for Chapter 6	91
7. Polytomous Discrete Variables: $R \times C$ Contingency Tables	93
General Ideas	93
Independence of Two Discrete Variables	93
Examples with R Code	93
A Goodness-of-Fit Test	98
A Special Goodness-of-Fit Test: Test for Random Allocation	100
Theoretical Aspects	102
Key Points for Chapter 7	103
8. The Generalized Linear Model: Logistic and Poisson Regression	105
General Ideas	105
Binary Logistic Regression	105
Examples with R Code	107
The Logit Transformation	107
Poisson Regression	113
Overdispersion	116
Zero-Inflated Data and Poisson Regression	120
Theoretical Aspects	124
Logistic Regression	124
Poisson Regression	126
Overdispersed Poisson	126
Zero-Inflated Poisson	127
Key Points for Chapter 8	128
9. Multivariate Analyses: Dimension Reduction, Clustering, and Discrimination	129
General Ideas	129
Dimension Reduction: Principal Components	130
Clustering	131
Discrimination	131
MANOVA	132

Examples with R Code	132
Dimension Reduction: Principal Components	132
Clustering	135
Discrimination	142
MANOVA	143
Theoretical Aspects	144
Principal Components	145
Discrimination	145
MANOVA	148
Key Points for Chapter 9	149
10. Bayesian and Frequentist Philosophies	151
General Ideas	151
Bayes' Theorem: Not Controversial	151
Conjugacy	153
Beta, Binomial	153
Poisson, Gamma	154
Normal, Normal	155
Monte Carlo Markov Chain (MCMC) Method	156
Examples with R Code	157
Exponential, Gamma	157
Bayesian Regression Analysis	158
Markov Chain Monte Carlo	159
Theoretical Aspects	162
Bayesian Regression Analysis	162
A Slightly More Complicated Model	165
An Afterword about Bayesian Methods	167
Key Points for Chapter 10	168
11. Decision and Game Theory	169
General Ideas	169
Examples with R Code	170
Discrete Choices, Discrete States	170
Discrete Choices, Continuous States: Reward and Cost as a Function of Choice	173
Discrete Choices, Continuous States: An Inverted Problem	176
Game Theory: Types of Games and Evolutionarily Stable Strategies	181
Theoretical Aspects	185
Verifying Models: Frequentist and Bayesian Approaches	185
Key Points for Chapter 11	187
12. Modern Prediction Methods and Machine Learning Models	189
General Ideas	189
Do Machines Learn?	189

Examples with R Code	190
Stepwise Regression	192
Artificial Neural Networks	197
Classification and Regression Trees (CART)	200
Bayesian Model Averaging	203
Theoretical Aspects	207
Key Points for Chapter 12	209
13. Time-to-Event	211
General Ideas	211
Examples with R Code	212
Comparison of Survival Curves	212
Theoretical Aspects	215
Obtaining an Empirical Survival Model	222
Censored Time-to-Failure	223
Comparison of Survival Distributions	224
Mantel-Cox LogRank and Peto and Peto Procedures	224
Cox Proportional Hazard Model	225
Key Points for Chapter 13	227
14. Time Series Analysis and Stochastic Processes	229
General Ideas	229
Time Series	229
Identifying Time Series Model Types and Orders	231
The Box-Jenkins Approach	233
Nonstationarity and Differencing	238
Examples with R Code: Time Series	238
Time Series	238
Markov Chains	241
Extensions of Markov Chains	243
Examples with R Code: Markov Chains	244
Theoretical Aspects	248
Time Series	248
Markov Chains	249
Key Points for Chapter 14	250
15. Study Design and Sample Size Considerations	253
Degrees of Freedom: The Accounting of Experimental Design	253
Latin Squares and Partial Latin Squares: Useful Design Tools	254
Power for ANOVA	255
Sample Size and Confidence Intervals	258
Confidence Intervals for Proportions	259
Pseudo-Replicates	260
Too Many p -Values: False Discovery Rate	262
Key Points for Chapter 15	264

16. When Things Go Wrong	265
Inadequate Measurement System	265
Incorrect Assignment of Individuals to Groups	265
An Undiscovered Covariate	266
Unintended Order Effects	266
Missing Data	267
Imputation	269
Summary	271
Key Points for Chapter 16	271
Appendix A: Matrices and Vectors	273
Appendix B: Solving Your Problem	287
References	289
Index	293
