

Guiding You Through *Principles of Biology* x

CHAPTER 1

An Introduction to Biology 1

- 1.1 Principles of Biology and the Levels of Biological Organization 2
- 1.2 Unity and Diversity of Life 6
Evolutionary Connections: The Study of Evolution Allows Us to Appreciate the Unity and Diversity Among Different Species 11
- 1.3 Biology as a Scientific Discipline 12

UNIT I Chemistry

© Dr. Parvinder Sethi

CHAPTER 2

The Chemical Basis of Life I: Atoms, Molecules, and Water 19

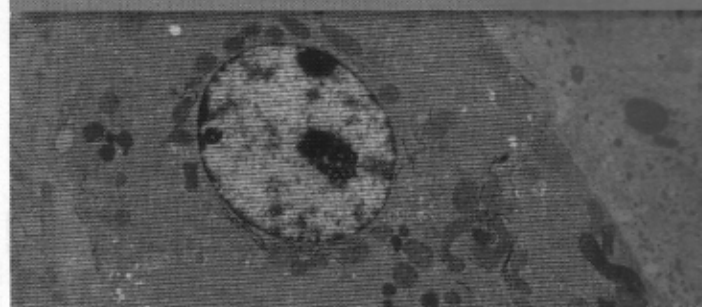

- 2.1 Atoms 20
- 2.2 Chemical Bonds and Molecules 22
- 2.3 Chemical Reactions 27
- 2.4 Properties of Water 28
Quantitative Analysis: Concentrations of Molecules in Solution Can Be Defined by Mass and Moles 29
- 2.5 pH and Buffers 32

CHAPTER 3

The Chemical Basis of Life II: Organic Molecules 35

- 3.1 The Carbon Atom and Carbon-Containing Molecules 36
- 3.2 Synthesis and Breakdown of Organic Molecules 38
- 3.3 Overview of the Four Major Classes of Organic Molecules Found in Living Cells 38
- 3.4 Carbohydrates 39
- 3.5 Lipids 42
- 3.6 Proteins 45
Feature Investigation: Anfinsen Showed That the Primary Structure of Ribonuclease Determines Its Three-Dimensional Structure 49
Evolutionary Connections: Proteins Contain Functional Domains 51
- 3.7 Nucleic Acids 52

UNIT II Cells

© Dennis Kunkel Microscopy, Inc./Phototake

CHAPTER 4

Evolutionary Origin of Cells and Their General Features 57

- 4.1 Origin of Living Cells on Earth 58
- 4.2 Microscopy 64
- 4.3 Overview of Cell Structure and Function 67
- 4.4 The Cytosol 72
- 4.5 The Nucleus and Endomembrane System 77
- 4.6 Semiautonomous Organelles 83
Evolutionary Connections: Mitochondria and Chloroplasts Are Derived from Ancient Symbiotic Relationships 85
- 4.7 Protein Sorting to Organelles 86
- 4.8 Extracellular Matrix and Plant Cell Walls 88
- 4.9 Systems Biology of Cells: A Summary 92

CHAPTER 5

Membranes: The Interface Between Cells and Their Environment 95

- 5.1 Membrane Structure 96
- 5.2 Fluidity of Membranes 97
- 5.3 Overview of Membrane Transport 100
- 5.4 Transport Proteins 104
Feature Investigation: Agre Discovered That Osmosis Occurs More Quickly in Cells with a Channel That Allows the Facilitated Diffusion of Water 104
- 5.5 Intercellular Channels 109
- 5.6 Exocytosis and Endocytosis 111
- 5.7 Cell Junctions 113

CHAPTER 6

How Cells Utilize Energy 117

- 6.1 Energy and Chemical Reactions 118
- 6.2 Enzymes 121
Quantitative Analysis: Enzyme Function Is Influenced by Substrate Concentration and by Inhibitors 123
- 6.3 Overview of Metabolism and Cellular Respiration 125
- 6.4 Glycolysis 130

- 6.5 Breakdown of Pyruvate 133
- 6.6 Citric Acid Cycle 134
- 6.7 Oxidative Phosphorylation 134
Feature Investigation: Yoshida and Kinoshita Demonstrated That the γ Subunit of ATP Synthase Spins 139
- 6.8 Connections Among Carbohydrate, Protein, and Fat Metabolism 141

CHAPTER 7

How Cells Capture Light Energy via Photosynthesis 143

- 7.1 Overview of Photosynthesis 144
- 7.2 Reactions That Harness Light Energy 146
- 7.3 Molecular Features of Photosystems 151
- 7.4 Synthesizing Carbohydrates via the Calvin Cycle 153
Feature Investigation: The Calvin Cycle Was Determined by Isotope-Labeling Methods 155
- 7.5 Variations in Photosynthesis 158
Evolutionary Connections: C_4 and CAM Plants Have Evolved a Mechanism to Minimize Photorespiration 158

CHAPTER 8

How Cells Communicate with Each Other
and with the Environment 162

- 8.1 General Features of Cell Communication 163
- 8.2 Receptor Activation 166
Quantitative Analysis: Receptors Have a Measurable Affinity for Their Ligands 167
- 8.3 Cell Surface Receptors 168
- 8.4 Intracellular Receptors 170
- 8.5 Signal Transduction and Cellular Response via an Enzyme-Linked Receptor 171
Evolutionary Connections: Receptor Tyrosine Kinases Are Found in Choanoflagellates and Animals 171
- 8.6 Signal Transduction and Cellular Response via a G-Protein-Coupled Receptor 173

UNIT III Genetics

© Prof. Kenneth Seddon & Dr. Timothy Evans, Queen's Univ.
Belfast/SPL/Science Source

CHAPTER 9

The Information of Life: DNA and RNA Structure, DNA
Replication, and Chromosome Structure 179

- 9.1 Properties and Identification of the Genetic Material 180
Feature Investigation: Avery, MacLeod, and McCarty Used Purification Methods to Reveal That DNA Is the Genetic Material 181
- 9.2 Nucleic Acid Structure 183
- 9.3 Discovery of the Double-Helix Structure of DNA 187
- 9.4 Overview of DNA Replication 188
- 9.5 Molecular Mechanism of DNA Replication 191
- 9.6 Molecular Structure of Eukaryotic Chromosomes 196

CHAPTER 10

The Expression of Genetic Information via Genes I:
Transcription and Translation 200

- 10.1 Overview of Gene Expression 201
- 10.2 Transcription 202
- 10.3 RNA Modifications in Eukaryotes 204
- 10.4 Translation and the Genetic Code 207
Feature Investigation: Nirenberg and Leder Found That RNA Triplets Can Promote the Binding of tRNA to Ribosomes 209
- 10.5 The Machinery of Translation 211
Evolutionary Connections: Comparisons of Small Subunit rRNAs Among Different Species Provide a Basis for Establishing Evolutionary Relationships 215
- 10.6 The Stages of Translation 216

CHAPTER 11

The Expression of Genetic Information via Genes II:
Non-coding RNAs 220

- 11.1 Overview of Non-coding RNAs 221
- 11.2 Role of Non-coding RNAs in Eukaryotic DNA Replication 225
- 11.3 Effects of Non-coding RNAs on Chromatin Structure and Transcription 226
- 11.4 Effects of Non-coding RNAs on Translation, mRNA Degradation, and RNA Modification 227
Feature Investigation: Fire and Mello Show That Double-Stranded RNA Is More Potent Than Antisense RNA at Silencing mRNA 228
- 11.5 Non-coding RNAs and Protein Targeting 232
- 11.6 Non-coding RNAs and Genome Defense 234
- 11.7 Role of Non-coding RNAs in Human Disease and Plant Health 236

CHAPTER 12

The Control of Genetic Information via Gene
Regulation 240

- 12.1 Overview of Gene Regulation 241
- 12.2 Regulation of Transcription in Bacteria 244
- 12.3 Regulation of Transcription in Eukaryotes:
Roles of Transcription Factors 248

- 12.4 Regulation of Transcription in Eukaryotes: Changes in Chromatin Structure and DNA Methylation** 251
- 12.5 Regulation of RNA Splicing and Translation in Eukaryotes** 255
- Quantitative Analysis: Alternative Splicing Is More Prevalent in Complex Eukaryotic Species 255

CHAPTER 13

Altering the Genetic Material: Mutation, DNA Repair, and Cancer 259

- 13.1 Consequences of Mutations** 260
- 13.2 Causes of Mutations** 262
- Feature Investigation: The Lederbergs Used Replica Plating to Show That Mutations Are Random Events 263
- Quantitative Analysis: Testing Methods Determine If an Agent Is a Mutagen 266
- 13.3 DNA Repair** 267
- 13.4 Cancer** 269

CHAPTER 14

How Eukaryotic Cells Sort and Transmit Chromosomes: Mitosis and Meiosis 277

- 14.1 The Eukaryotic Cell Cycle** 278
- 14.2 Mitotic Cell Division** 282
- Evolutionary Connections: Cell Division in Bacteria Involves FtsZ, a Protein Related to Eukaryotic Tubulin 284
- 14.3 Meiosis and Sexual Reproduction** 286
- Quantitative Analysis: Meiosis Enhances Genetic Diversity 292
- 14.4 Variation in Chromosome Structure and Number** 294

CHAPTER 15

Transmission of Genetic Information from Parents to Offspring I: Patterns that Follow Mendel's Laws 300

- 15.1 Mendel's Laws of Inheritance** 301
- Quantitative Analysis: A Punnett Square Is Used to Predict the Outcome of Crosses 305
- 15.2 Chromosome Theory of Inheritance** 307
- 15.3 Pedigree Analysis of Human Traits** 310
- 15.4 Variations in Inheritance Patterns and Their Molecular Basis** 311
- 15.5 Sex Chromosomes and X-Linked Inheritance Patterns** 314

CHAPTER 16

Transmission of Genetic Information from Parents to Offspring II: Epigenetics, Linkage, and Extranuclear Inheritance 318

- 16.1 Overview of Epigenetics** 319
- 16.2 Epigenetics: Genomic Imprinting** 320

- 16.3 Epigenetics: X-Chromosome Inactivation** 322
- 16.4 Epigenetics: Effects of Environmental Agents** 325
- 16.5 Extranuclear Inheritance: Organelle Genomes** 328
- Evolutionary Connections: Chloroplast and Mitochondrial Genomes Are Relatively Small but Contain Genes That Encode Important Proteins 328
- 16.6 Linkage of Genes on the Same Chromosome** 330
- Feature Investigation: Bateson and Punnett's Crosses of Sweet Peas Showed That Genes Do Not Always Assort Independently 331

CHAPTER 17

The Simpler Genetic Systems of Viruses and Bacteria 336

- 17.1 Genetic Properties of Viruses** 337
- 17.2 Genetic Properties of Bacteria** 344
- 17.3 Gene Transfer Between Bacteria** 348
- Evolutionary Connections: Horizontal Gene Transfer Is the Transfer of Genes Between the Same or Different Species 350

CHAPTER 18

Genetic Technologies: How Biologists Study Genes and Genomes 353

- 18.1 Gene Cloning** 354
- Quantitative Analysis: A DNA Library Is a Collection of Many Different DNA Fragments Cloned into Vectors 357
- 18.2 Genomics: Techniques for Studying and Altering Genomes** 360
- 18.3 Bacterial and Archaeal Genomes** 365
- 18.4 Eukaryotic Genomes** 366
- Evolutionary Connections: Gene Duplications Provide Additional Material for Genome Evolution, Sometimes Leading to the Formation of Gene Families 367
- 18.5 Repetitive Sequences and Transposable Elements** 369

UNIT IV Evolution

© Mark Dadswell/Getty Images

CHAPTER 19

Evolution of Life I: How Populations Change from Generation to Generation 375

- 19.1 Overview of Evolution** 376
- 19.2 Evidence of Evolutionary Change** 379

- 19.3 Genes in Populations 386**
 Evolutionary Connections: Genes Are Usually Polymorphic 386
 Quantitative Analysis: The Hardy-Weinberg Equation Relates Allele and Genotype Frequencies in a Population 387
- 19.4 Natural Selection 390**
 Feature Investigation: The Grants Observed Natural Selection in Galápagos Finches 393
- 19.5 Genetic Drift 396**
- 19.6 Migration and Nonrandom Mating 400**

CHAPTER 20

Evolution of Life II: The Emergence of New Species 403

- 20.1 Identification of Species 404**
- 20.2 Reproductive Isolation 406**
- 20.3 Mechanisms of Speciation 409**
 Feature Investigation: Podos Found That an Adaptation for Feeding May Have Promoted Reproductive Isolation in Finches 410
- 20.4 Evo-Devo: Evolutionary Developmental Biology 414**
 Evolutionary Connections: The *Hox* Genes Have Been Important in the Evolution of a Variety of Body Patterns 415

CHAPTER 21

How Biologists Classify Species and Study Their Evolutionary Relationships 419

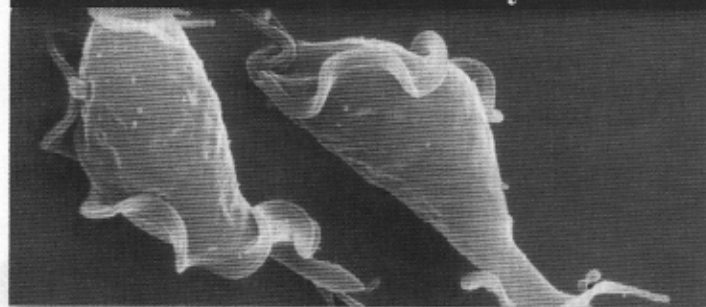

- 21.1 Taxonomy 420**
 Evolutionary Connections: Every Species Is Placed into a Taxonomic Hierarchy 421
- 21.2 Phylogenetic Trees 423**
- 21.3 Cladistics 426**
 Quantitative Analysis: The Principle of Parsimony Is Used to Choose from Among Possible Cladograms 428
- 21.4 Molecular Clocks 430**
- 21.5 Horizontal Gene Transfer 432**

CHAPTER 22

The History of Life on Earth and Human Evolution 435

- 22.1 The Fossil Record 436**
 Quantitative Analysis: Radioisotopes Provide a Way to Date Fossils 437
- 22.2 History of Life on Earth 438**
 Evolutionary Connections: The Origin of Eukaryotic Cells Is Hypothesized to Involve a Union Between Bacterial and Archaeal Cells 442
- 22.3 Human Evolution 448**
 Evolutionary Connections: Comparing the Genomes of Humans and Chimpanzees 449

UNIT V Diversity

© David M. Phillips/Science Source

CHAPTER 23

Diversity of Microbial Life: Archaea, Bacteria, Protists, and Fungi 461

- 23.1 Introduction to Microorganisms 462**
- 23.2 Diversity and Ecological Importance of Archaea 465**
- 23.3 Diversity and Ecological Importance of Bacteria 466**
- 23.4 Diversity in Bacterial Cell Structure and Metabolism 469**
- 23.5 Diversity and Ecological Importance of Protists 473**
 Evolutionary Connections: Primary Plastids and Primary Endosymbiosis 480
- 23.6 Diversity and Ecological Importance of Fungi 484**
- 23.7 Technological Applications of Microorganisms 492**

CHAPTER 24

Microbiomes: Microbial Systems on and Around Us 494

- 24.1 Microbiomes: Diversity of Microbes and Functions 495**
- 24.2 Microbiomes of Physical Systems 499**
- 24.3 Host-Associated Microbiomes 501**
 Feature Investigation: Blanton, Gordon, and Associates Found That Gut Microbiomes Affect the Growth of Malnourished Children 506
- 24.4 Engineering Animal and Plant Microbiomes 508**

CHAPTER 25

Plant Evolution: How Plant Diversification Changed Planet Earth 512

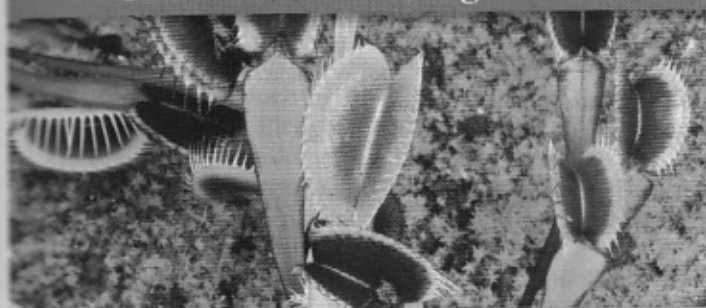

- 25.1 Ancestry and Diversity of Land Plants 513**
- 25.2 An Evolutionary History of Land Plants 520**
- 25.3 Diversity of Modern Gymnosperms 522**
- 25.4 Diversity of Modern Angiosperms 526**
 Evolutionary Connections: Flower Organs Evolved from Leaflike Structures 527
 Feature Investigation: Hillig and Mahlberg Analyzed Secondary Metabolites to Explore Species Diversification in the Genus *Cannabis* 531
- 25.5 Human Influences on Angiosperm Diversification 533**

CHAPTER 26**Invertebrates: The Vast Array of Animal Life
Without a Backbone 535**

- 26.1 Characteristics of Animals 536**
- 26.2 Animal Classification 537**
Evolutionary Connections: The Protostomes Consist of Two
Major Clades—the Ecdysozoa and the Lophotrochozoa 541
- 26.3 Ctenophores: The Earliest Animals 543**
- 26.4 Porifera: The Sponges 544**
- 26.5 Cnidaria: Jellyfish and Other Radially Symmetric
Animals 545**
- 26.6 Lophotrochozoa: The Flatworms, Rotifers, Bryozoans,
Brachiopods, Mollusks, and Annelids 547**
Quantitative Analysis: How Many Flukes? 549
- 26.7 Ecdysozoa: The Nematodes and Arthropods 555**
- 26.8 Deuterostomia: The Echinoderms and Chordates 562**

CHAPTER 27**Vertebrates: Fishes, Amphibians, Reptiles, and
Mammals 569**

- 27.1 Vertebrates: Chordates with a Backbone 570**
- 27.2 Gnathostomes: Jawed Vertebrates 573**
- 27.3 Tetrapods: Gnathostomes with Four Limbs 577**
Feature Investigation: Davis and Colleagues Provide a Genetic-
Developmental Explanation for Limb Length in Tetrapods 577
- 27.4 Amniotes: Tetrapods with a Desiccation-Resistant Egg 581**
- 27.5 Mammals: Milk-Producing Amniotes 585**

UNIT VI Flowering Plants

© John Swithinbank/agefotostock

CHAPTER 28**An Introduction to Flowering Plant Form and
Function 591**

- 28.1 From Seed to Seed: The Life of a Flowering Plant 592**
- 28.2 Plant Growth and Development 596**
- 28.3 The Shoot System: Stem and Leaf Adaptations 600**
Feature Investigation: Lawren Sack and Colleagues Showed That
Palmate Venation Confers Tolerance of Leaf Vein Breakage 602
- 28.4 Root System Adaptations 608**

CHAPTER 29**How Flowering Plants Sense and Interact with Their
Environments 611**

- 29.1 Overview of Plant Behavioral Responses 612**
- 29.2 Plant Hormones 615**
Evolutionary Connections: Plant Gibberellin Responses Evolved
in a Stepwise Manner 617
- 29.3 Plant Responses to Light 619**
- 29.4 Plant Responses to Gravity and Touch 622**
- 29.5 Plant Responses to Attack 624**

CHAPTER 30**How Flowering Plants Obtain and Transport
Nutrients 628**

- 30.1 Plant Nutritional Requirements 629**
- 30.2 The Roles of Soil in Plant Nutrition 632**
- 30.3 Transport at the Cellular Level 636**
Quantitative Analysis: The Water Potential Equation Can Be Used
to Predict Cellular Water Status 639
Evolutionary Connections: Relative Water Content Measurements
Reveal Plant Adaptation to Water Stress 640
- 30.4 Plant Transport at the Tissue Level 640**
- 30.5 Long-Distance Transport in Plants 643**

CHAPTER 31**How Flowering Plants Reproduce
and Develop 651**

- 31.1 An Overview of Flowering Plant Reproduction 652**
- 31.2 Flower Production, Structure, and Development 656**
Feature Investigation: Liang and Mahadevan Used Time-Lapse Video
and Mathematical Modeling to Explain How Flowers Bloom 658
- 31.3 Male and Female Gametophytes and Double
Fertilization 660**
- 31.4 Embryo, Seed, Fruit, and Seedling Development 663**
- 31.5 Asexual Reproduction in Flowering Plants 667**
Evolutionary Connections: The Evolution of Plantlet Production in
Kalanchoë 667

UNIT VII Animals

© John Rowley/Getty Images RF

CHAPTER 32

General Features of Animal Bodies, and Homeostasis as a Key Principle of Animal Biology 671

- 32.1 **Organization of Animal Bodies** 672
Evolutionary Connections: Organ Development and Function Are Controlled by *Hox* Genes 677
- 32.2 **The Relationship Between Form and Function** 677
- 32.3 **Homeostasis** 679
- 32.4 **Homeostatic Regulation of Body Temperature** 681
- 32.5 **Principles of Homeostasis of Internal Fluids** 685
Feature Investigation: Cade and Colleagues Discovered Why Athletes' Performances Wane on Hot Days 688

CHAPTER 33

Neuroscience I: The Structure, Function, and Evolution of Nervous Systems 692

- 33.1 **Cellular Components of Nervous Systems** 693
- 33.2 **Electrical Properties of Neurons and the Resting Membrane Potential** 696
Quantitative Analysis: An Ion's Equilibrium Potential Depends on Its Concentration Gradient 698
- 33.3 **Generation and Transmission of Electrical Signals Along Neurons** 699
- 33.4 **Communication at Synapses** 703
- 33.5 **The Evolution and Development of Nervous Systems** 707
- 33.6 **Structure and Function of the Nervous Systems of Humans and Other Vertebrates** 709
Feature Investigation: Gaser and Schlaug Showed That the Sizes of Certain Brain Structures Differ Between Musicians and Nonmusicians 715
- 33.7 **Impact on Public Health** 717

CHAPTER 34

Neuroscience II: How Sensory Systems Allow Animals to Interact with the Environment 721

- 34.1 **Introduction to Sensation** 722
- 34.2 **Mechanoreception** 723
- 34.3 **Thermoreception and Nociception** 728
- 34.4 **Photoreception** 729
Evolutionary Connections: Color Vision Is an Ancient Adaptation in Animals 732
- 34.5 **Chemoreception** 735
Feature Investigation: Buck and Axel Discovered a Family of Olfactory Receptor Proteins That Bind Specific Odor Molecules 736
- 34.6 **Impact on Public Health** 738

CHAPTER 35

How Muscles and Skeletons Are Adaptations for Movement, Support, and Protection 742

- 35.1 **Types of Animal Skeletons** 743
- 35.2 **Skeletal Muscle Structure and the Mechanism of Force Generation** 745
Evolutionary Connections: Did an Ancient Mutation in Myosin Play a Role in the Development of the Human Brain? 747
- 35.3 **Types of Skeletal Muscle Fibers and Their Functions** 752
- 35.4 **Impact on Public Health** 753

CHAPTER 36

Circulatory and Respiratory Systems: Transporting Solutes and Exchanging Gases 757

- 36.1 **Types of Circulatory Systems** 758
Evolutionary Connections: A Four-Chambered Heart Evolved from Simple Contractile Tubes 760
- 36.2 **The Composition of Blood** 761
- 36.3 **The Vertebrate Heart and Its Function** 763
- 36.4 **Blood Vessels** 767
- 36.5 **Relationship Among Blood Pressure, Blood Flow, and Resistance** 770
Quantitative Analysis: Cardiac Output and Resistance Determine Blood Pressure 771
- 36.6 **Physical Properties of Gases** 772
- 36.7 **Types of Respiratory Systems** 773
- 36.8 **Structure and Function of the Mammalian Respiratory System** 777
- 36.9 **Mechanisms of Gas Transport in Blood** 780
Quantitative Analysis: The Ability of Hemoglobin to Bind Oxygen is Decreased by Factors Such as Temperature, CO_2 , and pH 781
- 36.10 **Control of Ventilation** 783
- 36.11 **Impact on Public Health** 784

CHAPTER 37

Digestive and Excretory Systems Help Maintain Nutrient, Water, and Energy Balance and Remove Waste Products from Animal Bodies 790

- 37.1 **Overview of Animal Nutrition** 791
- 37.2 **General Principles of Digestion and Absorption of Nutrients** 794
- 37.3 **Vertebrate Digestive Systems** 795
Evolutionary Connections: Genetics Explains Lactose Intolerance 801
- 37.4 **Nutrient Use and Storage** 804
- 37.5 **Regulation of the Absorptive and Postabsorptive States** 807

- 37.6 Excretory Systems in Different Animal Groups 809
 37.7 Structure and Function of the Mammalian Kidneys 813
 37.8 Impact on Public Health 818
 Feature Investigation: Barry Marshall, Robin Warren, and Coworkers Demonstrated a Link Between Bacterial Infection and Ulcers 819

CHAPTER 38

How Endocrine Systems Influence the Activities of All Other Organ Systems 824

- 38.1 Types of Hormones and Their Mechanisms of Action 825
 38.2 Links Between the Endocrine and Nervous Systems 828
 38.3 Hormonal Control of Metabolism and Energy Balance 830
 Feature Investigation: Banting, Best, Collip, and MacLeod Were the First to Isolate Active Insulin 834
 38.4 Hormonal Control of Mineral Balance 837
 Evolutionary Connections: Hormones and Receptors Evolved as Tightly Integrated Molecular Systems 839
 38.5 Hormonal Control of Growth and Development 840
 38.6 Hormonal Control of Reproduction 842
 38.7 Impact on Public Health 843

CHAPTER 39

The Production of Offspring: Reproduction and Development 846

- 39.1 Overview of Sexual and Asexual Reproduction 847
 Feature Investigation: Paland and Lynch Provided Evidence That Sexual Reproduction May Promote the Elimination of Harmful Mutations in Populations 848
 39.2 Gametogenesis and Fertilization 850
 39.3 Human Reproductive Structure and Function 853
 39.4 Pregnancy and Birth in Mammals 858
 Evolutionary Connections: The Evolution of the Globin Gene Family Has Been Important for Internal Gestation in Mammals 859
 39.5 General Events of Embryonic Development 861
 39.6 Impact on Public Health 867

CHAPTER 40

Immune Systems: How Animals Defend Against Pathogens and Other Dangers 871

- 40.1 Types of Pathogens 872
 40.2 Innate Immunity 873
 Evolutionary Connections: Innate Immune Responses Require Proteins That Recognize Features of Many Pathogens 875
 Feature Investigation: Lemaire and Colleagues Identify an Immune Function for Toll Protein in *Drosophila* 875

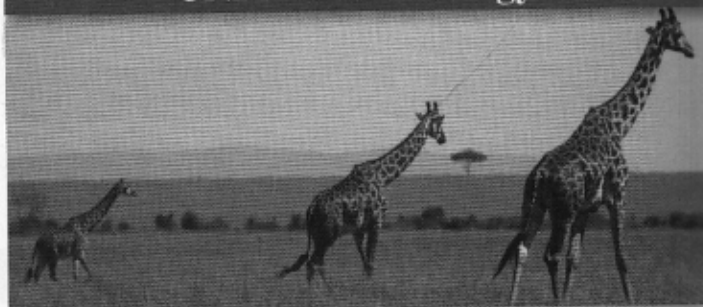

- 40.3 Acquired Immunity 878
 40.4 Impact on Public Health 888

CHAPTER 41

Integrated Responses of Animal Organ Systems to a Challenge to Homeostasis 891

- 41.1 Effects of Hemorrhage on Blood Pressure and Organ Function 892
 41.2 The Rapid Phase of the Homeostatic Response to Hemorrhage 894
 41.3 The Secondary Phase of the Homeostatic Response to Hemorrhage 898
 41.4 Impact on Public Health 902

UNIT VIII Ecology

© AGF/UIT/Getty Images

CHAPTER 42

Behavioral Ecology: The Struggle to Find Food and Mates and to Pass on Genes 907

- 42.1 The Influence of Genetics and Learning on Behavior 908
 Feature Investigation: Tinbergen's Experiments Show That Digger Wasps Learn the Positions of Landmarks to Find Their Nests 909
 42.2 Communication 911
 42.3 Living in Groups and Optimality Theory 914
 Quantitative Analysis: Game Theory Establishes Whether Individuals Fight or Flee 916
 42.4 Altruism 917
 42.5 Mating Behavior 919

CHAPTER 43

Population Growth and Species Interactions 923

- 43.1 Measuring Population Size and Density 924
 Quantitative Analysis: Mark-Recapture Can Be Used to Estimate Population Size 925
 43.2 Demography 926
 43.3 How Populations Grow 928

- 43.4 Species Interactions 931**
 Evolutionary Connections: Organisms Have Evolved Many
 Defenses Against Natural Enemies 934

CHAPTER 44

Communities and Ecosystems: Ecological Organization at Large Scales 940

- 44.1 Patterns of Species Richness and Species Diversity 941**
 Quantitative Analysis: Calculating Species Diversity 943
44.2 Species Diversity and Community Stability 945
44.3 Succession: Community Change 946
44.4 Island Biogeography 949
 Feature Investigation: Simberloff and Wilson's Experiments
 Tested the Predictions of the Equilibrium Model of Island
 Biogeography 952
44.5 Food Webs and Energy Flow 954
44.6 Biomass Production in Ecosystems 957

CHAPTER 45

How Climate Affects the Distribution of Species on Earth 962

- 45.1 Climate 963**
45.2 Major Biomes 969
 Evolutionary Connections: Continental Drift and Biogeography
 Help Explain Species Distributions 971

CHAPTER 46

The Age of Humans 974

- 46.1 Human Population Growth 975**
46.2 Global Warming and Climate Change 977
46.3 Pollution and Human Influences on Biogeochemical Cycles 980
 Feature Investigation: Stiling and Drake's Experiments with
 Elevated CO₂ Showed an Increase in Plant Growth but a Decrease in
 Herbivory 981
46.4 Pollution and Biomagnification 987
46.5 Habitat Destruction 988
46.6 Overexploitation 990
 Quantitative Analysis: Ecologists Make Calculations to Determine
 If Overexploitation Is Occurring 993
46.7 Invasive Species 995

CHAPTER 47

Biodiversity and Conservation Biology 1000

- 47.1 Genetic, Species, and Ecosystem Diversity 1001**
47.2 Value of Biodiversity to Human Welfare 1001
47.3 Conservation Strategies 1005

Appendix A Periodic Table of the Elements A-1

Appendix B Answers to In-Chapter and End-of-Chapter Questions B-1

Index I-1
