ABOUT THE AUTHOR xxii

Introduction

FAQs for Biological Anthropology 3

How Old Is the Planet and What Organisms Have Lived on It over That Time? 3

If Life on Our Planet Has Changed So Much over Time, What About the Planet Itself? 6

Have Humans Changed? 6

Where Did Modern Science Come From? 7

Where Is Uzbekistan? 8

Chapter 1 Introduction to Evolutionary Fact and Theory 15

Anthropology Is the Study of Human and Nonhuman Primates 17

Anthropology Is a Scientific Discipline 18

Critical Thinking Is the Systematic Assessment of Information 18

Connections: The Internet Abounds with Fake News and Misrepresentation: Check Ourselves with Critical Thinking 20

The Scientific Method Is a Way of Testing Ideas About the World Around Us 20

Connections: That's a Fact, Jack . . . Or Is It? 21

Scientific Investigation Is a Collaborative Process 23

Evolutionary Theory Is the Cornerstone of Anthropology 24

Evolution Is Both Fact and Theory 24

Early Explanations of Life Were Both Philosophical and Religious 24

Connections: Making a Monkey Out of You? 24

The Scientific Revolution Opened the Door to Systematic Study of the World 26

Evolutionary Thought Emerged from Scientific Collaboration 27

Connections: Where Are the Women? 30

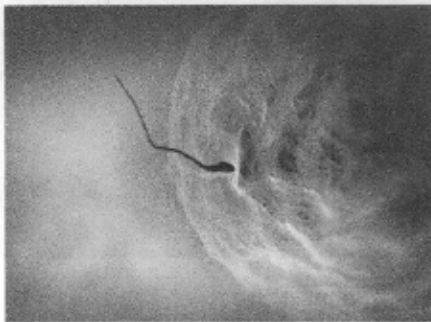

Charles Darwin Proposed Natural Selection as the Mechanism of Evolution 32

Connections: Can You Understand Evolution and Be Religious? 39

What We Know/Questions That Remain 40

Summary	41
Critical Thinking	41
Resources	42
References	43

Chapter 2 Basics of Human Biology 45

The Place of Human Beings in Nature 47

Where Do Humans Fit In? 47

Connections: Why Do Monkeys Look Like Little People and Our Dogs Understand Us? 47

How Are Relationships Among Organisms Determined? 48

Human Morphology: The Body's Form and Structure 49

Tissues Cover Us and Bind Us Together 49

The Skeleton: Our Basic Form 50

The Musculature Interacts with the Skeleton 53

Connections: My Bones Ache... 54

All Mammals Share Common Skeletal Structures 55

Human Physiology: The Systems of the Body 55

The Circulatory and Respiratory Systems Transport Nutrients and More 55

The Nervous System and Brain Control the Actions of the Body and Assess the Organism's Surroundings 57

The Endocrine System Regulates and Communicates Hormonal Information Throughout the Body 58

The Digestive System Processes Nutrients 60

The Reproductive System Enables Us to Produce Offspring 60

Connections: Whoa, Where Did That Come From? The Fascinating Development of Human Genitals 63

What We Know/Questions That Remain 63

All of These Systems (and More) Are Interconnected 64

Summary 64

Critical Thinking 64

Resources 65

Chapter 3 Introduction to Genetics and Genomics 67

Heredity Is the Passing of Information from Generation to Generation 69

Connections: "Gene"—What Is in a Word? 70

DNA Is a Core Molecule of Biological Heredity 70

DNA Is Found in Cells 70

DNA Has a Specific Structure 70

DNA Has Three Main Functions 72

Connections: Why Is It Important to Understand What DNA Does? 79

Mendel's Basic Model of Inheritance 80

Traits Are Passed from Generation to Generation 80

Much Has Changed Since Mendel's Work 81

The Relationship Between Genes and Traits Is Complex 82

Four Ways Genes Are Related to Traits 83

Are There Specific Genes for Certain Diseases? 84

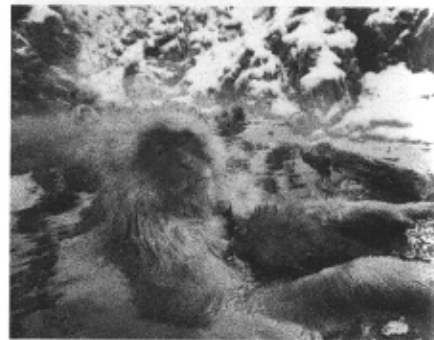

What About All of the DNA That Is Not Genes?	84
Does DNA Cause Certain Behaviors?	85
Connections: My Genes Made Me Do It!	86
Population Genetics Helps Us Understand Evolution	87
What We Know/Questions That Remain	88
Summary	89
Critical Thinking	89
Resources	90
References	91
 Chapter 4 Contemporary Evolutionary Theory	 93
There Are Four Standard Modes of Biological Change in Populations	94
<i>Mutations Are Changes in the DNA</i>	97
<i>Gene Flow Is the Movement of Alleles Within and Between Populations</i>	97
<i>Genetic Drift Is a Change in Allele Frequency Across Generations Due to Random Factors</i>	98
<i>Current Concepts of Natural Selection Involve an Understanding of Genetics</i>	99
Connections: Survival of the Fittest? Not Really	101
Contemporary Evolutionary Theory: Adding to the Four Basics	103
Speciation Is the Process by Which New Species Arise	105
<i>Species Can Be Defined in Many Ways</i>	106
Connections: Species, Schmeecies . . . I Know One When I See It and So Do They	106
<i>Subspecies Are Divisions Within a Species</i>	107
Phyletic Gradualism and Punctuated Equilibrium: Different Paces of Change	108
Similarities Can Result from Either Parallel or Convergent Evolution	109
Biodiversity in Evolution: Why We Should Care About Biological Variation	110
Connections: Why Conserve Stuff Anyway?	111
What We Know/Questions That Remain	112
Summary	113
Critical Thinking	114
Resources	114
References	115

Chapter 5 Primate Behavioral Ecology 117

Comparative Primatology Provides Insights into Modern Human Behavior	118
<i>The Living Primates Are Widespread and Diverse</i>	118
<i>Comparing the Primates Helps Us Understand Behavior</i>	124
Connections: Monkey See, Monkey Do, and Humans Too?	127
<i>To Study Behavior, We Have to Measure It</i>	127
<i>Specific Methodologies Are Used to Measure Primate Behavior</i>	127
<i>A Behavior Can Be Viewed from Five Perspectives</i>	128
<i>Behavior Matters in Evolutionary Processes</i>	128

©Sean Pavone/Alamy Stock Photo

Behavioral Ecology Provides the Basis for Evolutionary Investigations of Behavior	129
<i>Socioecological Pressures Affect Organisms in Five Areas</i>	129
<i>Success of a Behavioral Adaptation Is Measured in Terms of Energy Costs and Benefits</i>	131
<i>Reality Is More Complex Than Suggested by Cost-Benefit Analyses</i>	132
<i>Niche Construction and Primates</i>	134
Connections: Are All Men Jerks?	134
General Behavior Patterns in the Living Primates	135
<i>Mother-Infant Bonds Are the Core of Primate Societies</i>	135
<i>There Are a Few Primary Grouping Patterns in Primates</i>	136
<i>Affiliation and Grooming Are Important in Primate Societies</i>	137
<i>Hierarchies and Dominance Help Structure Primate Societies</i>	137
<i>Dispersal and Life History Patterns Are Important to Social Behavior</i>	138
<i>Cooperation and Conflict Are Integral to Primate Societies</i>	139
Social Organization in Two Nonhuman Primate Societies:	
Macaques and Chimpanzees	139
<i>Macaques: A Widespread Primate Genus</i>	139
<i>Chimpanzees: Our Closest Relatives</i>	144
Humans Are Also Primates, and Human Behavior Has an Evolutionary History	149
<i>Social Organization and Behavior in Humans</i>	149
<i>Comparisons with Macaques</i>	150
<i>Comparisons with Chimpanzees</i>	150
<i>What Is Distinctively Human?</i>	151
Connections: Why We Never Shut Up	151
What We Know/Questions That Remain	152
<i>Conserving the Nonhuman Primates Is a Critical Challenge</i>	153
Summary	153
Critical Thinking	154
Resources	154
References	155
 Chapter 6 Early Primate Evolution	 159
Fossils Provide Direct Evidence of an Organism's Existence	160
Humans Are Members of the Order of Mammals Called Primates	163
<i>A Very Brief History of the Mammals</i>	163
<i>Primates Are Mammals with Specific Characteristics</i>	163
Connections: Homiothermy Is Cool!	165
The Fossil Primates	165
<i>The Earliest Possible Primates Are Found in the Paleocene</i>	165
<i>Why Did Primates Evolve Out of Early Mammalian Groups?</i>	168
<i>True Primates Appear in the Eocene</i>	168
<i>Anthropoids (Simiiformes) Radiate in the Oligocene</i>	170
Connections: Why Care About 30-Million-Year-Old Dead Primates?	172
<i>Hominoid Primates Radiate During the Miocene</i>	173

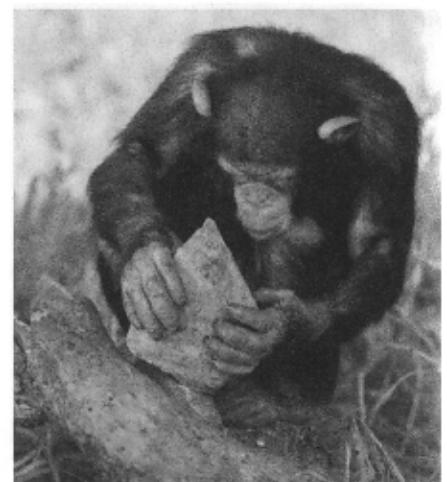

©Worldswildlifewonders/Shutterstock

Connections: Ok, So Is <i>Gigantopithecus</i> Bigfoot?	178
Nonhominoid Anthropoid Primates Radiate During the Pliocene and Pleistocene	179
Evolutionary Relationships Among These Fossil Primates Are a Matter of Debate	179
What We Know/Questions That Remain	181
Summary	181
Critical Thinking	182
Resources	182
References	183
Chapter 7 Early Hominin Evolution	185
Connections: Why Walking on Two Legs Makes Birth Painful for Mom	187
Classification of Hominids/Hominins Is a Subject of Debate	188
Early Hominins Evolved Primarily in East Africa	191
Early Possible Hominins	192
Hominins of the Middle and Late Pliocene Were Bipedal and Sexually Dimorphic	195
Connections: Big Guys with Small Teeth Rock!	198
Were There Early Hominins in Southern Africa?	201
Evolutionary Relationships Are Unclear	201
Fossils Give Us Clues About Early Hominin Behavior	202
Habitat: Where They Lived	203
Diet: What Did They Eat, and How Did They Get It?	203
Tools: Did They Use Bone, Wood, or Stone Tools?	203
Social Life: How Did They Live Together?	204
The Bipedalism That Wasn't	204
Connections: Hyenas, Wolves, and Saber-Toothed Cats, Oh My!	205
The Evolution of Bipedality Has Several Possible Explanations	205
What We Know/Questions That Remain	207
Summary	208
Critical Thinking	208
Resources	209
References	210
Chapter 8 Plio-Pleistocene Hominins and the Genus <i>Homo</i>	213
Changes at the Late Pliocene-Pleistocene Boundary	215
The Robust Hominins Had Unique Cranial and Dental Anatomy	216
The Genus <i>Paranthropus</i> : Hominins with Massive Chewing Adaptations	217
Robust Hominin Behavior	220
The Gracile Hominins Shared Characteristics with Both Earlier and Later Groups	222
Genus <i>Australopithecus</i> : Three Plio-Pleistocene Forms	222
Are These <i>Australopithecines</i> Ancestral to Humans?	226
Early <i>Homo</i> : A New Genus Emerges	226
Connections: Where Is the Missing Link?	228

©Martin Shields/Science Source

*Gracile Hominin Behavior and the Advent of
Biocultural Evolution* 230

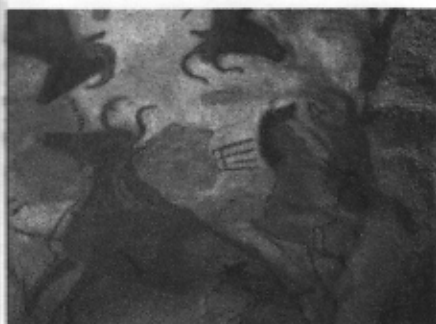

The Genus <i>Homo</i> Diversifies: The First Humans	233
A Classification Debate: One Genus but How Many Species?	234
Physical Characteristics of <i>H. erectus</i>	236
Geographic Distribution of <i>H. erectus</i>	237
Connections: Is That You Frodo? Ardi?	239
When Did Hominins Expand Beyond Africa?	241
Why Did Hominins Expand Beyond Africa?	242
<i>H. erectus</i> Material Culture and the Expansion of the Biocultural Evolution	242
Connections: What's the Deal with Fire?	246
What We Know/Questions That Remain	247
Summary	248
Critical Thinking	248
Resources	249
References	249

Chapter 9 The Rise of Contemporary Humans 253

Archaic <i>Homo sapiens</i> and the Changing Speed of Innovation	255
The Oldest Archaic Human Fossils Are Found in Africa	256
Archaic Human Fossils Are Found Across Eurasia	257
Archaic Humans Are Found in China but Not in Southeast Asia	259
Is <i>Homo heidelbergensis</i> Really a Species?	260
The Neanderthals Were Not as Different as First Thought, but They Were Not Exactly Us	260
Connections: I'm No Neanderthal!	262
Material Culture of the Archaic Humans	262
Increased Complexity in Tool Use and Hunting	263
Dietary and Behavior Changes Associated with New Tool Kits	263
Social Patterns: High Levels of Communal Cooperation	265
Postmortem Modification of Bodies	266
Why Did the Archaic Humans, Specifically the Neanderthals, Disappear?	267
The Appearance of "Anatomically Modern" <i>Homo sapiens</i>	268
Anatomically Modern Humans Are Defined Morphologically, Not Behaviorally	268
The Earliest Fossils with Contemporary Morphologies Are Found in Africa	268
The Eurasian Record Demonstrates the Spread of Contemporary Humans	270
Material Culture Becomes Even More Complex in Contemporary Humans	272
Blades and Associated Industries Revolutionized the Human Tool Kit	273
Changing Technologies and Behavioral Patterns Affected Diet	275
Modern Humans Used Art and Symbols	276
Connections: Art for Art's Sake?	277

©John Reader/Science Source

<i>Burial of the Dead Was Ubiquitous and Postmortem Modification Common</i>	278
<i>Current Human Patterns Began to Emerge 20,000 Years Ago</i>	278
<i>Connections: Why We Love Our Dogs (At Least Some of Us Do)</i>	278
<i>The Origin of Contemporary Humans Is a Matter of Debate</i>	279
<i>The Case for a Recent African Origin</i>	280
<i>The Case for Multiregional Evolution</i>	282
<i>The Case for Multiple Dispersals</i>	284
<i>As Usual, Reality Is Not Particularly Clear</i>	285
<i>What We Know/Questions That Remain</i>	286
<i>These Models Influence the Way We Think About Human Differences</i>	287
Summary	287
Critical Thinking	288
Resources	289
References	289
Chapter 10 Human Biological Diversity in Context	293
<i>A Basic Summary of Human Evolution: The Origin of Behavioral and Biological Diversity</i>	295
<i>Human Societies Began to Form</i>	296
<i>Humans Have Long Exhibited Biological Diversity</i>	296
<i>A Visible but Misunderstood Variation: Skin "Color"</i>	297
<i>Connections: Everyone Tans! But Skin Color Is Still Culturally Defined</i>	298
<i>Another Visible Difference: Body Shape and Size</i>	301
<i>A Cornerstone of Variation Research: Skull Morphology</i>	302
<i>Connections: Skulls Are Us?</i>	303
<i>Sex Differences Are Seen in the Skeletal and Soft Tissue of Humans</i>	304
<i>The Impact of Disease Environments: Variation in the Human Immune System</i>	306
<i>Blood Types Vary Within and Across Populations</i>	307
<i>Most Genetic Variation Is Found Within Populations</i>	308
<i>Connections: If There Are no Genetic Races, Why Can Some Companies Tell Me My "Ancestry" from My DNA?</i>	310
<i>Human Biological Diversity Is Best Explained Using a Biocultural Approach</i>	311
<i>Evolution and Human Cultural Complexity</i>	312
<i>Examples of Selection and Adaptation in Human Variation</i>	313
<i>Race Is a Very Poor Way to Describe Variation in Homo sapiens sapiens</i>	317
<i>What Is the Evidence Regarding Biological Races in Humans?</i>	318
<i>Connections: Is High Blood Pressure a Black Thing?</i>	319
<i>There Is a Scientific Study of Human Biological Variation</i>	320
<i>Why Does the Notion of Biological Race Persist?</i>	321
<i>A Very Brief History of Racism</i>	321
<i>Modern Notions Are Also Due to a Lack of Context</i>	323

Chapter 11 The Present and Future of Human Evolution 333

How Do We Study Human Behavioral Evolution? 334

The Standard Evolutionary Approach 334

Human Behavioral Ecology (HBE) 335

Evolutionary Psychology (EP) 336

Gene-Culture Coevolution 336

Biocultural Approaches and the Extended Evolutionary Synthesis 337

*A Modern Approach to Studying the Evolution (Past and Future)
of Human Behavior* 338

Humans Are Still Evolving 339

Diseases and Modern Humans 339

*Connections: Can Evolutionary Perspectives Be Applied to
Modern Medicine?* 342

Cultural Patterns Influence Morphology 343

Culture, Evolution, and the Future: Where Are We Headed? 348

*Human Densities and Global Population Are Dramatically
Different Today* 348

Genetic Manipulation Can Influence Our Evolution 351

Connections: Where Is That Banana From? 353

Some of Our Behavior Reflects Adaptations 353

Understanding Biological Anthropology and Understanding Ourselves 354

What We Know/Questions That Remain 354
