

CONTENTS

Preface iv
Lab Safety Rules vi

PART ONE Basic Microbiology 1

Introduction to Microbiology 1

1. Diversity of Microorganisms 3
2. Pure Culture and Aseptic Technique 9
3. Introduction to the Compound Light Microscope 17
4. The Oil Immersion Lens 23

Introduction to Staining of Microorganisms 29

5. Simple Stains: Positive and Negative Stains 31
6. Differential and Other Special Stains 37

Introduction to Microbial Growth 47

7. Chemically Defined, Complex, Selective, and Differential Media 49
8. Quantification of Microorganisms 53
9. Aerobic and Anaerobic Growth 61
10. The Effect of Incubation Temperature on Generation Time 67

Introduction to Control of Microbial Growth 75

11. Moist and Dry Heat Sterilization: Thermal Death Point and Thermal Death Time 77
12. Control of Microbial Growth with Ultraviolet Light 89
13. Changes in Osmotic Pressure Due to Salt and Sugar and Their Effects on Microbial Growth 97
14. Antibiotics 105
15. Antiseptics and Disinfectants 111

Introduction to Microbial Culturing and Identification 117

16. Gram Positive Skin Flora: Staphylococci 119
17. Gram Positive Flora: Streptococci and Enterococci 127
18. Enzymes and Hydrolysis 137
19. Identification of Enteric Gram-Negative Rods 143
20. Unknown Identification 153
21. Chromogenic Agars and All-in-One Tests 163

Introduction to Microbial Genetics 171

22. Selection of Bacterial Mutants Resistant to Antibiotics 173
23. Transformation: A Form of Genetic Recombination 179
24. Gene Regulation: Induction and Catabolite Repression 185

PART TWO The Other Microbial World 191

Introduction to the Other Microbial World 191

25. Microscopic Identification of Fungi 193
26. The Protists: Algae, Lichens, Slime and Water Molds 209
27. Parasites 219
28. Titration of Prokaryotic Viruses 235

PART THREE Public Health 243

Introduction to Public Health 243

29. Bacteriological Examination of Water: Most Probable Number (MPN) and Membrane Filter Techniques 245
30. Microbial Examination of Food 259
31. Epidemiology 265

PART FOUR Applications of Biotechnology 269

Introduction to Immunology and Biotechnology 269

32. Identifying DNA with Restriction Enzymes and the Polymerase Chain Reaction (PCR) 271
33. Electrophoresis 279
34. Identification of Bacteria Using the Ribosomal Database Project 285
35. Microarray 291
36. Enzyme-Linked Immunosorbent Assay (ELISA) 297
37. Differential White Blood Cell Stains 303

APPENDICES

1. Culture Media and Reagent Formulas 313
2. Living Microorganisms (Bacteria, Fungi, Protozoa, and Helminths) Chosen for Study in This Manual 318
3. Dilution Practice Problems 320
4. Alternative Procedures 322
5. Use of the Ocular Micrometer for Measurement of Relative and Absolute Cell Size 325
6. History and Working Principles of Light Microscopy 327
7. Use of the Metric System with Conversions to the English System of Measurement 330

Index 331
