

C

CONTENTS

1 Invitation to Biology

- 1.1 The Secret Life of Earth 4
- 1.2 Life Is More Than the Sum of Its Parts 4
- 1.3 How Living Things Are Alike 6
 - Organisms Require Energy and Nutrients 6
 - Organisms Sense and Respond to Change 6
 - Organisms Grow and Reproduce 6
- 1.4 How Living Things Differ 8
 - What Is a Species? 8
 - A Rose by Any Other Name 10
- 1.5 The Science of Nature 11
 - Thinking About Thinking 12
 - How Science Works 12
 - Examples of Experiments in Biology 13
- 1.6 The Nature of Science 16
 - Bias in Interpreting Experimental Results 16
 - Sampling Error 17
 - Scientific Theories 18
 - The Scope of Science 19

UNIT 1 HOW CELLS WORK

2 Molecules of Life

- 2.1 Fear of Frying 24
- 2.2 Start With Atoms 25
 - Why Electrons Matter 26
- 2.3 From Atoms to Molecules 28
 - Ionic Bonds 28
 - Covalent Bonds 28

- 2.4 Hydrogen Bonds and Water 29
 - Water Is an Excellent Solvent 30
 - Water Has Cohesion 31
 - Water Stabilizes Temperature 31
- 2.5 Acids and Bases 32
- 2.6 Organic Molecules 33
 - What Cells Do to Organic Compounds 33
- 2.7 Carbohydrates 34
- 2.8 Lipids 36
 - Fats 36
 - Phospholipids 36
 - Waxes 37
 - Steroids 37
- 2.9 Proteins 38
 - The Importance of Protein Structure 39
- 2.10 Nucleic Acids 41

3 Cell Structure

- 3.1 Food for Thought 46
- 3.2 What, Exactly, Is a Cell? 46
 - The Cell Theory 46
 - Components of All Cells 47
 - Constraints on Cell Size 47
 - How Do We See Cells? 48
- 3.3 Cell Membrane Structure 50
 - Membrane Proteins 51
- 3.4 Introducing Prokaryotic Cells 52
 - Biofilms 53
- 3.5 Introducing Eukaryotic Cells 54
 - The Nucleus 54
 - The Endomembrane System 54
 - Mitochondria 55
 - Chloroplasts 56
 - The Cytoskeleton 56
 - Extracellular Matrix 58
 - Cell Junctions 58
- 3.6 The Nature of Life 59

4 Energy and Metabolism

4.1 A Toast to Alcohol Dehydrogenase 64

4.2 Life Runs on Energy 65

4.3 Energy in the Molecules of Life 66

Why Earth Does Not Go Up in Flames 67

Energy In, Energy Out 68

4.4 How Enzymes Work 68

The Need for Speed 68

Factors That Influence Enzyme Activity 69

Cofactors 70

Metabolic Pathways 71

Controlling Metabolism 71

Electron Transfers 72

4.5 Diffusion and Membranes 73

Semipermeable Membranes 73

4.6 Membrane Transport Mechanisms 75

Passive Transport 75

Active Transport 76

Membrane Trafficking 76

5 Capturing and Releasing Energy

5.1 A Burning Concern 82

5.2 To Catch a Rainbow 83

Storing Energy in Sugars 84

5.3 Light-Dependent Reactions 85

5.4 Light-Independent Reactions 87

Alternative Carbon-Fixing Pathways 87

5.5 A Global Connection 89

Aerobic Respiration in Mitochondria 89

5.6 Fermentation 92

5.7 Food as a Source of Energy 94

Complex Carbohydrates 94

Fats 94

Proteins 95

UNIT 2 GENETICS

6 DNA Structure and Function

6.1 Cloning 100

6.2 Fame, Glory, and DNA Structure 102

Discovery of DNA's Function 102

Discovery of DNA's Structure 104

DNA Sequence 105

6.3 DNA in Chromosomes 106

6.4 DNA Replication and Repair 108

How Mutations Arise 108

7 Gene Expression and Control

7.1 Ricin, RIP 114

7.2 Gene Expression 115

7.3 Transcription: DNA to RNA 116

RNA Modifications 117

7.4 The Genetic Code 118

7.5 Translation: RNA to Protein 119

7.6 Products of Mutated Genes 122

7.7 Control of Gene Expression 124

Master Genes 124

Sex Chromosome Genes 125

Lactose Tolerance 125

DNA Methylation 126

How Cells Reproduce

Henrietta's Immortal Cells 132

Multiplication by Division 133

Cytoplasmic Division 136

Mitosis and Cancer 137

Cell Division Gone Wrong 137

Cancer 138

Telomeres 139

Sex and Alleles 140

On the Advantages of Sex 140

Meiosis in Sexual Reproduction 142

How Meiosis Mixes Alleles 144

From Gametes to Offspring 144

Patterns of Inheritance

Menacing Mucus 150

Tracking Traits 151

Mendel's Experiments 151

Inheritance in Modern Terms 151

Mendelian Inheritance Patterns 152

Monohybrid Crosses 153

Dihybrid Crosses 154

Beyond Simple Dominance 155

Incomplete Dominance 155

Codominance 155

Pleiotropy and Epistasis 156

Complex Variation in Traits 158

Continuous Variation 159

Human Genetic Analysis 160

Types of Genetic Variation 160

Human Genetic Disorders 161

The Autosomal Dominant Pattern 162

The Autosomal Recessive Pattern 163

The X-Linked Recessive Pattern 164

Chromosome Number Changes 165

Autosomal Change and Down Syndrome 166

Change in the Sex Chromosome Number 166

Genetic Screening 168

10 Biotechnology

10.1 Personal Genetic Testing 174

10.2 Finding Needles in Haystacks 175

Cutting and Pasting DNA 175

DNA Libraries 176

PCR 177

10.3 Studying DNA 178

Sequencing the Human Genome 178

Genomics 179

DNA Profiling 179

10.4 Genetic Engineering 181

Genetically Modified Microorganisms 181

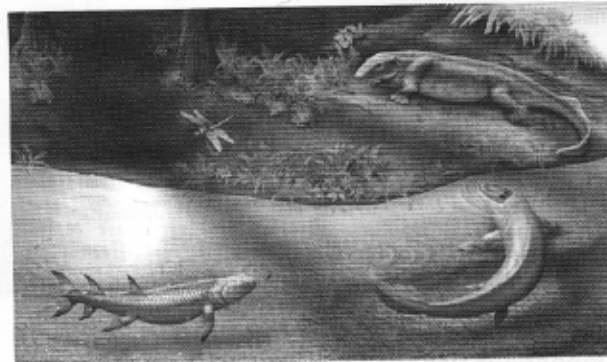

Designer Plants 181

Biotech Barnyards 182

10.5 Modifying Humans 184

Gene Therapy 184

Eugenics 185

UNIT 3 EVOLUTION AND DIVERSITY

11 Evidence of Evolution

11.1 Reflections of a Distant Past 190

11.2 Confusing Discoveries 191

11.3 A Flurry of New Ideas 192

Squeezing New Evidence Into Old Beliefs 192

Darwin and the HMS *Beagle* 193

A Key Insight—Variation in Traits 194

Great Minds Think Alike 195

11.4 Fossil Evidence 196

The Fossil Record 196

- Radiometric Dating 197
- Missing Links 199

11.5 Drifting Continents 200

- Putting Time Into Perspective 201

11.6 Evidence in Form 204

- Morphological Divergence 204
- Morphological Convergence 205

11.7 Evidence in Function 206

- Patterns in Animal Development 207

12 Processes of Evolution

12.1 Superbug Farms 212

12.2 Alleles in Populations 213

- An Evolutionary View of Mutations 213
- Allele Frequency 214

12.3 Modes of Natural Selection 215

- Directional Selection 215
- Stabilizing Selection 217
- Disruptive Selection 217

12.4 Natural Selection and Diversity 218

- Survival of the Sexiest 218
- Maintaining Multiple Alleles 219

12.5 Genetic Drift and Gene Flow 220

- Bottlenecks and the Founder Effect 220
- Gene Flow 221

12.6 Speciation 222

- Reproductive Isolation 222
- Allopatric Speciation 224
- Sympatric Speciation 224

12.7 Macroevolution 226

- Evolutionary Theory 228

12.8 Phylogeny 229

- Applications of Phylogeny 230

13 Early Life Forms and the Viruses

13.1 The Human Microbiome 236

13.2 On the Road to Life 237

- Conditions on the Early Earth 237
- Origin of the Building Blocks of Life 237
- Origin of Metabolism 238
- Origin of Genetic Material 238
- Origin of Cell Membranes 239

13.3 Origin of the Three Domains 240

- Reign of the Prokaryotes 240
- Origin of Eukaryotes 241

13.4 Viruses 242

- Viral Structure and Replication 242
- Bacteriophages 242
- Plant Viruses 243
- Viruses and Human Health 243
- HIV—The AIDS Virus 244
- Ebola 245
- New Flus 245

13.5 Bacteria and Archaea 246

- Structure and Function 246
- Reproduction and Gene Transfers 246
- Metabolic Diversity 247
- Domain Archaea 248
- Domain Bacteria 248

13.6 Protists 250

- Flagellated Protozoans 250
- Foraminifera 251
- Ciliates 251
- Dinoflagellates 252
- Apicomplexans 252
- Water Molds, Diatoms, and Brown Algae 254
- Red Algae 255
- Green Algae 255
- Amoebas and Slime Molds 256
- Choanoflagellates 257

14 Plants and Fungi

14.1 Fungal Threats to Crops 262

14.2 Plant Traits and Evolution 263

- Life Cycle 263
- Structural Adaptations to Life on Land 264
- Reproduction and Dispersal 264

14.3 Nonvascular Plants 265

- Mosses 265
- Liverworts and Hornworts 266

14.4 Seedless Vascular Plants 266

- Ferns 266
- Horsetails and Club Mosses 267

14.5 Rise of the Seed Plants 269

14.6 Gymnosperms 270

- Conifers 270
- Cycads and Ginkgos 271
- Gnetophytes 271

14.7 Angiosperms—Flowering Plants 272

- Floral Structure and Function 272
- A Flowering Plant Life Cycle 273
- Keys to Angiosperm Diversity 273
- Major Groups 273
- Ecology and Human Uses of Angiosperms 274

14.8 Fungal Traits and Diversity 274

- Yeasts, Molds, Mildews, and Mushrooms 274
- Lineages and Life Cycles 275

14.9 Ecological Roles of Fungi 277

- Decomposers 277
- Parasites 277
- Fungal Partnerships 278
- Human Uses of Fungi 279

15 Animal Evolution

15.1 Medicines From the Sea 284

15.2 Origins and Diversification 285

- Animal Origins 285
- Evidence of Early Animals 285
- Major Groups and Evolutionary Trends 286

15.3 Invertebrate Diversity 288

- Sponges 288
- Cnidarians 288
- Flatworms 289
- Annelids 290
- Mollusks 290
- Roundworms 291
- Arthropods 292
- Echinoderms 296

15.4 Introducing the Chordates 297

- Chordate Traits 297
- Invertebrate Chordates 297
- Vertebrate Traits and Trends 298

15.5 Fishes and Amphibians 299

- Jawless Fishes 299
- Jawed Fishes 299

Early Tetrapods 300

Modern Amphibians 301

15.6 Escape From Water—Amniotes 302

- Amniote Innovations 302
- Nonbird Reptiles 302
- Birds 303
- Mammals 303

15.7 Human Evolution 305

- Primate Traits 305
- Primate Origins and Diversification 305
- Australopiths 306
- Early Humans 307
- Homo Sapiens* 308
- Neanderthals and Denisovans 308

UNIT 4 ECOLOGY

16 Population Ecology

16.1 A Honkin' Mess 314

16.2 Characteristics of Populations 315

- Demographic Traits 315
- Collecting Demographic Data 316

16.3 Population Growth 317

- Exponential Growth 317
- Carrying Capacity and Logistic Growth 318
- Density-Independent Factors 319

16.4 Life History Patterns 320

- Biotic Potential 320
- Describing Life Histories 320
- Evolution of Life Histories 321
- Predation and Life History Evolution 322

16.5 Human Populations 323

Population Size and Growth Rate 323

Fertility Rates and Future Growth 324

Effects of Industrial Development 325

17 Communities and Ecosystems**17.1 Fighting Foreign Fire Ants 330****17.2 Community Structure 331**

Nonbiological Factors 331

Biological Factors 331

17.3 Direct Species Interactions 332

Commensalism and Mutualism 332

Interspecific Competition 333

Predator-Prey Interactions 334

Plants and Herbivores 335

Parasites and Parasitoids 335

17.4 How Communities Change 337

Ecological Succession 337

Adapted to Disturbance 338

Species Losses or Additions 338

17.5 The Nature of Ecosystems 339

Overview of the Participants 339

Food Chains and Webs 339

Primary Production and Inefficient Energy Transfers 341

17.6 Biogeochemical Cycles 342

The Water Cycle 342

The Phosphorus Cycle 342

The Nitrogen Cycle 344

The Carbon Cycle 345

The Greenhouse Effect and Global Climate Change 346

18 The Biosphere and Human Effects**18.1 Going With the Flow 352****18.2 Factors That Affect Climate 353**

Air Circulation Patterns 353

Ocean Circulation 354

18.3 The Major Biomes 355

Forest Biomes 355

Grasslands and Chaparral 356

Deserts 356

Tundra 356

18.4 Aquatic Ecosystems 358

Freshwater Ecosystems 358

Marine Ecosystems 358

18.5 Human Impact on the Biosphere 360

Increased Species Extinctions 360

Deforestation and Desertification 362

Acid Rain 362

Biological Accumulation and Magnification 363

The Trouble With Trash 363

Destruction of the Ozone Layer 364

Global Climate Change 364

18.6 Maintaining Biodiversity 366

The Value of Biodiversity 366

Conservation Biology 366

Ecological Restoration 367

Reducing Human Impacts 368

Appendix I**Answers to Self-Quizzes****Appendix II****Periodic Table of the Elements****Appendix III****A Plain English Map of the Human Chromosomes****Appendix IV****Units of Measure**
