Preface	xxv
Author	xxvii
1 Microorganisms	1
System 1	
Self-Organized System 1	
Life as Self-Organized Growth of Biomass 1	
Cell 3	
Organism and Microorganism 4	
Size of Microorganisms 4	
Biology 4	
Microbiology 5	
Environmental Microbiology 5	
Why Microbes Are Used in Environmental Engineering 5	
Organisms of Importance in Environmental Microbiology 6	
Viruses 6	
Subviral Particles 6	
Importance of Viruses in Environmental and Civil Engineering 7	
Prokaryotes 7	
Bacteria and Archaea 7	
Importance of Prokaryotes for Environmental and Civil Engineering 8	
Fungi 9	
Importance of Fungi for Environmental and Civil Engineering 11	
Algae 12	
Importance of Algae for Environmental Engineering 13	
Protozoa 13	
Importance of Protozoa for Environmental Engineering 14	
2 Static Biochemistry	15
Static and Dynamic Biochemistry 15	
Chemical Features of Life 15	
Balance of Elements 15	
Covalent Bond 16	
Organic Compounds and Functional Groups 16	
Polarity of Chemical Bond 17	

Water	17
pH of Solution	17
Intermolecular Forces	17
Hydrophobic Substances and Hydrophobic Forces	18
Stereoisomers	19
Biological Monomers and Polymers	19
Monosaccharides	20
Oligosaccharides and Polysaccharides	20
Lipids and Membranes	22
Lipid Membranes	23
Membrane Melting and Freezing	23
Amino Acids and Proteins	25
Structure of Protein Molecule	25
Globular and Fibrous Proteins	29
Denaturation of Proteins	29
Enzymes	30
Coenzymes	31
Nucleotides	31
Oligonucleotides	32
DNA Structure	33
DNA Melting	33
DNA as a Carrier of Genetic Information	34
DNA Sequences and Sequencing	36
RNA	36
Messenger RNA	37
Transfer RNA	37
Genetic Code	37
Ribosomal RNAs and Translation	37
16S rRNA	37
Functions of rRNA in Ribosome	38
MicroRNA	38
Summary on the Functions of Monomers and Polymers in Cell	38
3 Dynamic Biochemistry	41
Levels of Metabolism	41
Biochemical Reaction	41
Major Features of Enzymes	42
Mechanism of Enzymatic Catalysis	42
Specificity of Enzymes	42
Inactivation of Enzymes	43
Classification of Enzymes	43
Environmental Applications of Microbial	
Enzymes and Coenzymes	44
Control of Individual Biochemical Reaction	45

Control of a Group of Biochemical Reactions	47
Regulation of Enzymatic Activity in the Sequence of Enzymes	47
Regulation of Enzyme Synthesis and Degradation	48
Metabolic Blocks	48
Control of Metabolic Blocks	50
Temporal Control of Cell Metabolism	50
Control of Metabolism in Microbial Populations, Aggregates, and Ecosystems	51
Quorum Sensing	51
Control of Metabolism in Biosphere	52
4 Biooxidation and Bioreduction	53
Oxidation-Reduction	53
Oxidation Number	54
Oxidation of Carbon	54
Oxidation-Reduction during Fermentation	55
Energy	55
Two Sources of Biological Forms of Energy	55
Chemotrophy	56
Chemotrophic Oxidation-Reduction Reactions	57
Chemotrophy: Fermentation	57
Chemotrophy: Anaerobic (Anoxic) Respiration	57
Chemotrophy: Aerobic Respiration	58
Phototrophy	58
Oxygenic and Anoxygenic Phototrophic Oxidation-Reduction Reactions	58
Electron-Transfer Chain	59
Proton-Motive Force	59
Oxidative Phosphorylation	60
Biological Forms of Energy	60
Production of Biological Energy in Photosynthesis	60
ATP Yield of Oxidative Phosphorylation	61
ATP Production and Yield in Fermentation	62
ATP Yield of Lithotrophy	63
Long-Term Energy Storage in Cell	63
Relation to Oxygen and Generation of Energy	63
5 Biodegradation	65
Biodegradation and Biotransformation	65
Biochemical Reactions of Biodegradation	65
Aerobic and Anaerobic Biodegradation	66
Biodegraded Substances	66
Biodegradation Rates of Natural Substances	66

Biodegradation Rates Correlate with Turnover Rates	66
Degradation of Storage Polysaccharides	67
Biodegradation of Structural Polysaccharides	67
Biodegradation of Hemicellulose and Pectin	68
Biodegradation of Cellulose	68
Biodegradation of Lignin	68
White-Rot Fungi	69
Biodegradation of Chitin	69
Degradation of Proteins	70
Degradation of Amino Acids	70
Degradation of Nucleic Acids	70
Degradation of Lipids	71
Biodegradation of Chemicals	71
Degradation of Aliphatic Hydrocarbons	71
Degradation of Aromatic Hydrocarbons	72
Biodegradation of BTEX Chemicals	72
Bioremediation of Soil and Water Polluted by BTEX Chemicals	72
Xenobiotics	72
Plasmids of Degradation	73
Biodegradation of Chlorinated Hydrocarbons	74
Products of Degradation of Aromatic Hydrocarbons	75
Nonbiodegradable and Biodegradable Polymers	75
Polylactic Acid and Polyhydroxyalkanoates	77

6 Molecular Biology and Genetics 79

Metabolic Blocks of Biosynthesis	79
Energy for Biosynthesis	79
Balance of Energy	79
Excess of Biological Energy	80
Number of Enzymes	80
Gene	81
Noncoding RNA Gene	81
Chromosome	81
Genome	81
Genomes of Chloroplasts and Mitochondria	82
A Genome in Comparison with a Book	82
Flow of Genetic Information	82
Genetics, Molecular Biology, Bioinformatics, and Epigenetics	82
Collection of DNA Sequences	83
Nucleus and Nucleoid	83
Plasmids	84
Transposons	84
DNA Replication	84
Speed of DNA Replication	84

Transcription	85
Translation	85
Genetic Code	85
Changes in Genome	85
Natural Genetic Recombination in Prokaryotes	86
Conjugation	86
Transformation	87
Transduction	87
Horizontal Gene Transfer	87
DNA Repair and Mutations	87
Chemical Mutagens	87
Physical Mutagens	88
Biological Mutagens	88
Genetic Adaptation of Microbial Population to Changed Environment	88

7 Bioagents of Environmental and Engineering Bioprocesses 89

Hierarchy of Life	89
Cell Aggregates	89
Microbial Communities and Ecosystems	89
Shapes of Prokaryotic Individual Cell and Connected Cells	90
Shapes of Prokaryotic Cells as Evolutionary Adaptation to Environment	91
Inner Structure of Prokaryotic Cell	92
Intracellular Inclusions of Prokaryotic Cell	92
Outer Components of Prokaryotic Cell	93
Cytoplasmic Membrane	93
Vulnerability of Cytoplasmic Membrane	94
Prokaryotic Cell Wall	94
Origin of Gram-Negative and Gram-Positive Cells	94
Flagella, Fimbria, and Pilus	95
Outer Membrane, Lipopolysaccharides, and S-Layer	95
Glycocalyx and Capsule	95
Anabiotic Prokaryotic Cells	96
Structure of Eukaryotic Cell	96
Organelles	97

8 Reproduction, Proliferation, and Growth. 99

Reproduction of Viruses	99
Reproduction of Prokaryotes	99
Vegetative Reproduction of Microscopic Eukaryotes	99
Asexual and Sexual Reproduction of Microscopic Eukaryotes	100

Cell Growth and Cell Division Cycle	101
Coordination of Cell Cycle Events	101
Periods of Exotrophy and Endotrophy in Cell Cycle	101
Cell Differentiation	102
Growth and Proliferation of Cell Population	103
Generation Time and Number of Generations	103
Specific Growth Rate	103
Stoichiometry of Microbial Growth	104
Cell Age and Cell-Trophic-State Distributions in Microbial Population	105
Quantification of Microbial Biomass	106
Microscopic Enumeration	106
Flow Cytometry Enumeration	106
Physical Methods for Microbial Biomass Measurement	107
Chemical Methods for Microbial Biomass Measurement	107
Physiological Methods of Microbial Biomass Measurement	108
Biological Methods of Cell Enumeration: Plate Count	108
Biological Methods of Cell Enumeration: Most Probable Number Count	109
Enumeration of Cells and Viral Particles at Low Concentration	109
Molecular-Biological Methods for Microbial Biomass Quantification	110

9 Microbial Ecology111

Ecosystem	111
Level of Ecosystems	111
Boundary of Ecosystem	111
Boundaries of Unicellular Organisms	112
Boundary of Multicellular Aggregate	113
Boundaries of Microbial Communities in Environmental Engineering	113
Diversity of a Microbial Ecosystem	113
Diversity in an Anaerobic Digester	114
Types of Interactions in Microbial Ecosystems	115
Population Density Determines the Type of Interaction	115
Commensalism	116
Mutualism	116
Interactions of Microorganisms in Cellular Aggregates	118
Positive Interactions between Animals and Microorganisms	118
Symbiotic Mutualism	118
Positive Interactions between Plants and Microorganisms	119
Symbiotic Mutualism of Plants and Microorganisms	119
Neutral Competition	119
Amensalism	119

Antagonism	120
Predation	120
Parasitism	120
Plant Parasites	121
Parasites of Humans and Animals	121
Effects of Nutrients on Biotic Elements	121
Effects of Nutrients on Yield	122
Effect of Starvation on Microorganisms	122
Effect of Oxygen on Biotic Elements	122
Anoxic Microorganisms	123
Effect of Temperature on Growth	123
Effect of pH on Growth	124
Effect of Osmotic Pressure on Growth	124
Natural Death of Microorganisms	124
Fate of Released Microorganisms in Environment	125
10 Classification of Viruses and Microorganisms	127
Biological Classification	127
Units of Biological Classification	127
Classification of Viruses	127
Groups of Viruses	128
Importance of Viruses for Environmental Engineering	128
Isolation and Collection of Microbial Strains	128
Microbial Collections	129
Classification of Microorganisms	129
Phenotypic Characteristics	130
Genotypic Classification	130
Guanine/Cytosine (G+C) Content in DNA and Genotypic Classification	131
Comparison of the Steps in Phenotypic and Genotypic Identification of Strains	131
Phylogenetic Groups of Prokaryotes	131
Classification of Microscopic Fungi	133
Classification of Microscopic Algae	134
Classification of Protozoa	134
11 Physiological Classification of Prokaryotes	137
Physiology of Prokaryotes	137
Three Types of Energy Generation by Chemotrophy	137
Three Types of Energy Generation by Phototrophy	138
Evolution of Atmosphere and Prokaryotes	138
Contradictions between rRNA-Based Phylogenetic Classification and Physiological Classification of Prokaryotes	138

Absence of Predictive Power in rRNA-Based Phylogenetic Classification	139
Parallelism in Evolution of Genes	139
Periodic Table of Prokaryotes	140
Phototrophic Prokaryotes in the Periodic Table	141
Reasons of Parallelism and Periods in the Periodic Table of Prokaryotes	143
Geological Synchronization of the Periods in the Periodic Table of Prokaryotes	143
Practical Importance of the Periodic Table of Prokaryotes	144

12 Groups of Prokaryotes 145

Twenty-Four Major Physiological Groups of Prokaryotes	145
Functions of Anaerobic Prokaryotes	145
Gram-Negative (Aquatic), Chemotrophic, Fermenting Bacteria	145
Gram-Positive (Terrestrial), Chemotrophic, Fermenting Bacteria	147
Chemotrophic, Fermenting <i>Archaea</i>	148
Gram-Negative (Aquatic), Phototrophic Bacteria Using Products of Fermentation as Electron Donors	148
Gram-Positive (Terrestrial), Phototrophic Bacteria Using Products of Fermentation as Electron Donors	148
Phototrophic <i>Archaea</i> Using Products of Fermentation as Electron Donors	149
Functions of Anoxic Prokaryotes	149
Gram-Negative (Aquatic), Chemotrophic, Anoxic Bacteria	149
Gram-Positive (Terrestrial), Chemotrophic, Anoxic Bacteria	152
Chemotrophic, Anoxic <i>Archaea</i>	153
Gram-Negative (Aquatic), Phototrophic, Anoxic Bacteria	153
Gram-Positive (Terrestrial), Phototrophic, Anoxic Bacteria	154
Phototrophic <i>Archaea</i> Using Products of Anoxic Respiration as Electron Donors	155
Functions of Facultative Anaerobic and Microaerophilic Prokaryotes	155
Gram-Negative (Aquatic), Chemotrophic, Facultative Anaerobic and Microaerophilic Bacteria	155
Gram-Positive (Terrestrial), Chemotrophic, Facultative Anaerobic and Microaerophilic Bacteria	159
Chemotrophic, Facultative Anaerobic and Microaerophilic <i>Archaea</i>	160
Gram-Negative (Aquatic), Phototrophic, Facultative Anaerobic and Microaerophilic Bacteria	160

Gram-Positive (Terrestrial), Phototrophic, Facultative Anaerobic and Microaerophilic Bacteria	160
Phototrophic, Facultative Anaerobic and Microaerophilic <i>Archaea</i>	161
Functions of Aerobic Prokaryotes	161
Gram-Negative (Aquatic), Chemotrophic, Aerobic Bacteria	161
Gram-Negative (Aquatic), Chemolithotrophic, Aerobic Bacteria	164
Gram-Positive (Terrestrial), Chemotrophic, Aerobic Bacteria	166
Chemotrophic, Aerobic <i>Archaea</i>	167
Gram-Negative (Aquatic), Phototrophic, Aerobic Bacteria	167
Gram-Positive (Terrestrial), Phototrophic, Aerobic Bacteria	168
Phototrophic, Aerobic <i>Archaea</i>	168

13 Public Health and Water Disinfection. 169

Saprophytic, Pathogenic, and Opportunistic Microbes	169
Parasites of Humans and Animals	169
Stages of Infectious Disease	169
Transmission of Infection	170
Patterns and Extent of Infectious Disease	170
Cooperation of Epidemiologists and Civil Engineers	170
Infections via Vectors	171
Factors of Microbial Pathogenicity	171
Exotoxins	171
Enterotoxins	172
Problem of Opportunistic Bacteria in Environmental Biotechnology	172
Waterborne Pathogens	172
Detection of Waterborne Pathogenic Viruses	172
Waterborne Pathogenic Bacteria	172
Fate of Released Pathogens in the Environment	173
Waterborne Pathogenic Protozoa	174
Indicator Microorganisms	174
Coliforms as Indicators of Fecal Pollution	174
Other Indicators of Fecal Pollution	174
Bacteriological Quality of Water	175
Protozoan and Viral Pathogens	175
Detection of Pathogens in the Environment	175
Removal and Killing of Pathogens from the Environment	176
Control of Microbial Death in Water	176
Thermal Treatment of Water	176
Pasteurization and Sterilization	177
Sterilization by Electromagnetic Radiation	177

Sterilization by Filtration	177
Conservation	178
Disinfectants and Antiseptics	178
Antibiotics	178
Disinfection	178
Resistance of Different Microbial Groups to Disinfection	179
Comparison of Chemical Disinfectants	179
UV Disinfection of Water	180
Chemical Interference with Disinfection of Water	180
Physical Interference with Disinfection of Water	180

14 Biotechnological Processes. 181

Biotechnology	181
Environmental Biotechnology	181
Comparison of Biotechnological Treatment and Other Methods	181
Applicability of Environmental Biotechnology	182
Combination of Biotechnology with Other Methods	183
Bioprocesses Used in Environmental Biotechnology	183
Stages of Biotechnological Process	183
Upstream Processes in Environmental Biotechnology	183
Pretreatment in Biotechnology	184
Medium Preparation	184
Components of Medium	184
Preparation of Equipment	185
Preparation of Inoculum	185
Core Process in Environmental Biotechnology	185
Semi-Closed and Open Systems of Cultivation	186
Batch Culture	186
Continuous Cultivation	186
Chemostat	187
Plug-Flow System	187
Suspended Biomass Bioreactors	188
Continuous Systems with Internal Recycle or Retention of Biomass	188
Microbiological Methods Used in Environmental Engineering	189
Isolation of Pure Culture	190
Selection of Microorganisms	190
Theoretical Selection	191
Selection of Enrichment Culture	191
Selective Pressure	191
Mechanisms of Autoselection	192
Instability of Autoselected Features	192
Selection of Ecosystem	192
Construction of Genetically Engineered Microorganisms	193

Steps of Artificial Recombination of DNA	193
Applications of Genetic Engineering in Environmental Engineering	193
Physical Boundary of Artificial Ecosystem	194
Chemical Boundary of Artificial Ecosystem	194
Macro- and Microenvironments	194
Effects of Nutrients on Growth Rate	195
Downstream Processes	195
Microbial Aggregates	195
Structure of Microbial Aggregate	196
Sedimentation of Cellular Aggregates	196
Selection of Microbial Aggregates by Settling Time	197
15 Aquatic Systems and Water Biotreatment	199
Microorganisms of Hydrosphere, Lithosphere, and Atmosphere	199
Functions of Microorganisms in Hydrosphere	199
Biogeochemical Carbon Cycle	200
Biogeochemical Nitrogen Cycle	200
Biogeochemical Phosphorus Cycle	201
Biogeochemical Sulfur Cycle	201
Biogeochemical Iron Cycle	202
Stratification in Aquatic Ecosystem	203
Sources of Water Pollution	204
Eutrophication of Water in Reservoirs	204
Signs of Eutrophication	204
Treatment of Stormwater in Artificial (Constructed) Wetlands	205
Stages of Raw Drinking-Water Treatment	207
Pollutants of Water That Can Be Removed by Biotreatment	207
Biological Instability of Water	207
Chemical Removal of Biological Instability	207
Biological Removal of Biological Instability	208
Disadvantages of Bioremoval of Biological Instability	208
Biodegradable Organic Matter in Water	208
Chemical Oxygen Demand, Biological Oxygen Demand, and Total Organic Carbon	208
Measurement of BOM	209
Bioremoval of Biological Instability	210
Fixed-Bed Biofilter	210
Fluidized-Bed Biofilm Reactor	211
Biofiltration of Water through Soil	211
Organic Micropollutants of Water	211
Bioremoval of Endocrine Disruptors from Water	212
Bioremoval of Petroleum Hydrocarbons and Their Derivatives from Water	212

Bioremoval of Halogenated Compounds from Water	212
Sucralose	214
Taste-and-Odor Compounds of Microbial Origin	214
Arsenic in Water	214
Nitrate and Nitrite in Water	214
Denitrification of Drinking Water	215
Conditions for Denitrification	216
Bioreduction of Perchlorate in Drinking Water	216
Iron and Manganese in Water	216

16 Anaerobic and Anoxic Treatment of Wastewater. . . . 219

Oxygen and Energy Generation	219
Anaerobic Digestion of Organic Matter	220
Microbiology of Anaerobic Digestion of Biopolymers	220
Biogas Collection and Use	221
Optimal Conditions for Anaerobic Digestion of Organic Wastes	222
Interaction between Methanogenesis and Sulfate Reduction	222
Comparison of Anaerobic and Aerobic Digestions of Organic Waste	223
Bioreactors Used in Anaerobic Wastewater Treatment	223
Stirred Tank Reactor for Anaerobic Digestion of Organics	223
Upflow Anaerobic Sludge Blanket Reactor	223
Septic Tank	224
Anaerobic Processes in Landfills	224
Anaerobic Degradation of Xenobiotics by Fermenting Bacteria	224
Anoxic Bioprocesses	225
Anoxic Biotechnological Methods	225
Nitrate Reduction in Water and Wastewater Treatment	225
Nitrate Reduction in Microbially Enhanced Oil Recovery	226
Nitrate Reduction in Soil Bioremediation	226
Nitrate Reduction in Geotechnical Improvement of Soil	226
Iron Reduction in Water, Wastewater, and Groundwater Treatment	227
Sulfate Reduction in Water and Wastewater Treatment	228
Dehalogenating Bacteria	228
Combined Anaerobic/Aerobic Biotreatment of Wastes	228
Biotechnological Treatment of Heavy Metals-Containing Waste and Radionuclides-Containing Waste	229

17 Aerobic Treatment of Wastewater 231

Domestic Wastewater	231
Industrial Wastewater	231
Aeration	231

Objectives of Aerobic Biotreatment of Wastewater	232
Aerobic Treatment of Wastewater	232
Conventional Biotreatment in Aerobic Tank	232
Organic Load of Aerobic Treatment	234
Activated-Sludge Settleability	234
Activated-Sludge Recycling	234
Microorganisms of Activated Sludge	235
Activated-Sludge Flocs	236
Filamentous Bacteria in Activated-Sludge Flocs	236
Control of Filamentous Bulking of Activated Sludge	237
Foaming	237
Suspended Microbial Aggregates (Granules)	
Used in Aerobic Treatment of Wastewater	237
Removal of Nutrients	238
Aerobic Reactors	240
Aerobic Treatment of Wastewater with a Low Concentration of a Hazardous Substance	240
Aerobic Digestion of Activated Sludge	241
Combinations of Aerobic Treatment of Wastewater with Other Treatments	241
Application of Microaerophilic Microorganisms in Biotechnological Treatment	241
Aerobic Biofilm Reactors	242
Development of Biofilm in Aerobic Biofilm Reactors	242

18 Value-Added By-Products of Environmental Engineering 243

Organic Wastes as a Raw Material for Biotechnological Transformation	243
Biotechnological Products from Organic Wastes	243
Production of Enzymes from Wastes	243
Production of Organic Acids	246
Production of Flavors	247
Production of Polysaccharides	247
Edible Mushroom Production	248
Production of Biodegradable Plastics	248
Production of Animal Feed	249
Use of Organic Waste for Production of Fungi for Soil Bioremediation	249
Solid-State Fermentation of Agricultural and Food-Processing Wastes	249
Production of Fuel Ethanol	250
Production of Hydrogen, Methane, and Biodiesel	250

Production of Organic Fertilizer	251
Biorecovery of Metals from Mining and Industrial Wastes	251
Recovery of Phosphate and Ammonia	252

19 Biotreatment of Industrial Hazardous Wastes 253

Donors and Acceptors of Electrons in Biotreatment	253
Energetic Efficiency of Biooxidation-Bioreduction	253
Aerobic Treatment of Xenobiotics	254
Secondary Hazardous Wastes	254
Treatment of Wastewater with a Low	
Concentration of a Hazardous Substance	254
Biodegradation Using Co-Oxidation/Co-Metabolism	254
Combinations of Aerobic Biotreatment with Other Treatments	255
Biotreatment of Hazardous Waste by	
Anaerobic Fermenting Bacteria	255
Landfilling of Hazardous Solid Wastes	255
Combined Anaerobic/Aerobic Biotreatment	
of Hazardous Industrial Wastes	256
Optimization of Hazardous Wastes Biodegradation	256
Optimum Temperature for Biodegradation	
of Hazardous Wastes	257
Optimum pH for Biodegradation of Hazardous Wastes	257
Enhancement of Biodegradation by Nutrients	258
Enhancement of Biodegradation by Growth Factors	258
Increase of Bioavailability of Contaminants	258
Enhancement of Biodegradation by Enzymes	259
Enhancement of Biodegradation by	
Aeration and Oxygen Supply	259
Enhancement of Biodegradation by Oxygen Radicals	259
Enhancement of Biodegradation by Electron	
Acceptors Other than Oxygen	260
Bioenhancement of the Treatment of Hazardous Wastes	260
Application of Acclimated Microorganisms	261
Selection and Use of Pure Culture	261
Construction of Microbial Community	261
Construction of Genetically Engineered Microorganisms	262
Application of Microbial Aggregates and	
Immobilized Microorganisms	262
Chemical Gradients in Microbial Aggregates	263

20 Solid Wastes and Soil Biotreatment 265

Solid Waste	265
Treatment of Solid Wastes	265

Landfills	265
Biological Reactions of Decay in the Landfills	266
Sewage Sludge Processing	266
Composting	267
Microbiology of Composting	267
Bulking Agents	268
Types of Composting Systems	268
Optimal Parameters for Composting	269
Composting of the Mixture of Wastes	270
Vermicomposting	271
Composting Scale	271
Public Health Aspects of Composting	271
Odor Control in Composting	271
Composting of Hazardous Organic Wastes	271
Soil	272
Organic Matter in Soil	272
Microbial Activity and Soil	272
Soil and Biodegradation of Xenobiotics	273
Toxic Pollutants of Soil	273
Sources of Soil Pollution	273
Leakages from Underground Storage Tank Facilities	274
Landfill Leachate	274
Bioremediation	274
Soil and Groundwater Bioremediation	274
Landfarming, Land Treatment, and Plant Bioremediation	275
On-Site and In Situ Soil and Groundwater Bioremediation	275
Excavation of Contaminated Soil and Its Composting Treatment	275
Slurry-Phase Bioremediation in Bioreactors	275
Gas Cleaning	276
Pretreatment of Contaminated Soil	276
Steps in Microbial-Culture Development for Slurry-Phase Bioremediation	276
Advantages of Soil Bioremediation	277
Disadvantages of Soil Bioremediation	277
Artificial Formation of Geochemical Barrier	278
21 Microbial Geotechnics	279
Biogeotechnics	279
Bioclogging	279
Biocementation	280
Grouting	280
Microbial Processes of Bioclogging	280
Clogging with Microbial Polysaccharides	280

Bacteria Producing Clogging Polysaccharides	281
Geotechnical Applications of Bioclogging	281
Clogging with Microbially Induced Precipitates	281
Biobinding	282
Biocementation	282
Microbial Processes of Biocementation	282
Geotechnical Applications of Biocementation	282
Problems of Microbial Cementation and Clogging	283
Screening of Microorganisms for	
Bioclogging and Biocementation	283
Application of Anaerobic Fermenting	
Bacteria in Biogeotechnics	284
Application of Anoxic Bacteria in Biogeotechnics	284
Application of Facultative Anaerobic	
Bacteria in Biogeotechnics	285
Application of Microaerophilic Bacteria in Biogeotechnics	285
Application of Aerobic Bacteria in Biogeotechnics	285
General Considerations on Bacterial	
Applicability in Geotechnics	285
Biosafety in Biogeotechnics	286

22 Microbiology of Air and Air Treatment 287

Bioaerosols	287
Sources of Bioaerosols	287
Viral Aerosols	287
Bacterial Aerosols	288
Fungal Aerosols	288
Pollen Grain Aerosols	288
Concentration of Aerosols	288
Bioaerosol Sampling	289
Bioaerosols and Indoor Air Quality	289
Fate of Bioaerosols in Environment	289
Bioaerosols from Wastewater Treatment, Spray	
Irrigation, and Biotechnological Plants	290
Odors Generated by Wastewater-Treatment Plants	290
Treatment of Odorous and Exhaust Gases	290
Aerobic Biotechnological Treatment of Hazardous Waste Gas	291
Biotreatment of Toxic Gas	291

23 Biodeterioration, Biocorrosion, and Biofouling 293

Microbial Biodeterioration	293
Deterioration of Cultural Heritage Objects	294
Microbially Influenced Corrosion	295

	Microbial Formation of Acids	296
	Biofouling of Membranes	296
	Membrane Treatments of Water and Wastewater	297
	Mechanisms of Membrane Fouling	297
	Types of Foulants	297
	Fouling Control	298
24	Outline and Summary of the Course "Environmental Microbiology for Engineers"	299
	Course Outline	299
	Summary of the Course "Environmental Microbiology for Engineers"	302
	Microorganisms	302
	Static Biochemistry	302
	Dynamic Biochemistry	303
