SOLUTIONS MANUAL

Chapter 1: The Genetic Approach to Biology	1
Chapter 2: Single Gene Inheritance	9
Chapter 3: Independent Assortment of Genes	37
Chapter 4: Mapping Eukaryotic Chromosomes by Recombination	61
Chapter 5: The Genetics of Bacteria and Their Viruses	107
Chapter 6: Gene Interaction	123
Chapter 7: DNA: Structure and Replication	169
Chapter 8: RNA: Transcription and Processing	175
Chapter 9: Proteins and Their Synthesis	181
Chapter 10: Regulation of Gene Expression in Bacteria and Their Viruses	189
Chapter 11: Regulation of Gene Expression in Eukaryotes	197
Chapter 12: The Genetic Control of Development	203
Chapter 13: Genomes and Genomics	207
Chapter 14: The Dynamic Genome	215
Chapter 15: Mutation, Repair, and Recombination	221
Chapter 16: Large-Scale Chromosomal Changes	229
Chapter 17: Population Genetics	257
Chapter 18: Quantitative Genetics	267
Chapter 19: Evolutionary Genetics	279
Chapter 20: Gene Isolation and Manipulation	285

EXPLORING GENOMES

Table of Contents	295
Introduction	297
Detailed Table of Contents	300
1. Introduction to Genomic Databases	303
2. Learning to Use Entrez	308
3. Learning to Use BLAST	313
4. Using BLAST to Compare Nucleic Acid Sequences	318
5. Learning to Use PubMed	324
6. OMIM and Huntington Disease	328
7. Finding Conserved Domains	332
8. Clusters of Orthologous Groups	336
9. Determining Protein Structure	339
10. Functional Analysis	344
11. Exploring the Cancer Genome Anatomy Project	347
12. Measuring Phylogenetic Distance	352
13. Environmental Genomics	357
