

Contents

Preface.....	xi
Authors.....	xiii
1. General Introductory Topics	1
Part 1: Fundamental Mathematics.....	1
Dirac Delta Pulse.....	1
Kronecker Delta Pulse.....	3
Kronecker Comb	3
sinc Function.....	3
Convolution.....	4
Cross-Correlation.....	4
Autocorrelation.....	5
Fourier Transform	6
Discrete Fourier Transform	8
Least-Squares Fit	9
Method of Least-Squares Fit for Multiple Parameters	10
Nyquist-Shannon Sampling Theorem	11
Basic Statistics.....	11
Student's <i>t</i> -Test.....	13
Speckle Contrast.....	14
Statistical Distribution Functions	15
Part 2: Fundamental Biology.....	16
Basic Biological Concepts.....	16
Cell Structure.....	17
Tissue Structure.....	34
References	37
2. Optics Components and Electronic Equipment	39
Lenses	40
Convex Lenses	40
Concave Lenses	41
Compound Lenses and Arrays	41
Maintenance and Care of Optical Lenses	43
Handling	44
Storage	44
Cleaning and Maintenance	44
Waveplate	45
Linear Polarizers	46
Mirrors.....	46
Plane Mirror.....	47
Convex Mirror	47
Concave Mirror	48
Optical Coating.....	49
Metal Coatings.....	49

Antireflection Coatings	50
High-Reflection Coatings	50
Filters	50
Prisms	51
Combination Prisms	52
Optical Fibers	53
Structure	53
Single-Mode and Multimode Fibers	55
Fiber Connectors	55
Optomechanical Equipment	56
Optical Table	56
Translational Stages	56
Rotation Stages	57
Mirror Mounts	58
Lasers	58
Photodetectors	62
Photodiodes	62
Phototransistors	62
Photomultiplier Tubes	63
Charge-Coupled Devices	63
Power Meter	64
Spectrometers	64
Electrical Equipment	65
Data Acquisition System	66
Amplifiers	66
Digitizer	67
Signal Generation	69
Power Supply	69
Function Generator	70
Electrical and Light Safety	71
Electrical Safety	71
Light Safety	71
3. Fundamental Light-Tissue Interactions: Light Scattering and Absorption	73
Principles of Light Scattering and Absorption	73
Refractive Index of Biological Tissue	74
Basics of Theory of Light Scattering and Absorption	78
Scattering and Absorption of Light in Tissue by Small Particles	85
Lab Discussion	99
Laboratory 1: Absorption: Measurement of Hemoglobin Concentration	100
Laboratory Protocol	100
Instrumentation	100
LED Sources	101
Lenses	103
Detectors	103
Mechanical Design	104
Sample Preparation	105
Experiment	105
Data Analysis	106

Laboratory 2: Biomedical Application of Absorption Measurements.....	106
Laboratory 3: Scattering: Measurement of Structure.....	109
Attenuation and Anisotropy of Scattering.....	109
Instrumentation.....	110
Sample Preparation.....	110
Experiment.....	110
Data Analysis.....	111
Backscattering Cross-Section Spectra	111
Instrumentation.....	113
Sample Preparation.....	114
Experiment.....	114
Data Analysis.....	115
Laboratory 4: Biomedical Application of Scattering Measurements	115
References	117
4. Microscopic Tissue Imaging	119
Principles of Optical Microscopy	119
Types of Contrast in Microscopy	124
Phase Contrast.....	124
Spectral Contrast: Scattering	130
Spectral Contrast: Fluorescence	131
Spectral Contrast: Nonlinear Scattering.....	133
Depth Sectioning in Microscopy	134
Laboratory Exercises	138
Laboratory 1: Overview of the Microscope: Kohler Illumination	138
Laboratory Protocol	138
Materials and Sample Preparation	140
Experiment.....	140
Data Analysis.....	141
Laboratory 2: Contrasts in Microscopy.....	142
Instrumentation.....	142
Phase Contrast Settings.....	142
DIC Settings	142
Fluorescence Settings	142
Digital Camera Settings	143
Materials and Sample Preparation	143
Experiment.....	144
Analysis	145
Laboratory 3: Build Your Own Microscope	145
Discussion	145
Materials	146
Exercises	147
Laboratory 4: Interference-Based Imaging.....	150
Instrumentation.....	151
Materials and Sample Preparation	152
Experiment.....	152
Data Analysis.....	154
Confocal Light Absorption and Scattering Spectroscopic Microscopy	155
Introduction	155

Light Scattering Spectroscopy for the Determination of Particle Size.....	156
Effect of Objective Lens on LSS	157
Laboratory 5: Experimental Observation of LSS and Effect of Finite NA on LSS Spectrum.....	158
Laboratory 6: Spectroscopic Microscopy and Thin-Film Interference.....	159
Background	160
Thin-Film Interference Basics: Recovering Film Properties from Spectrum (Normal Incidence)	161
Slab with Inhomogeneous Refractive Index	162
Backscattering in Three-Dimensional Media	165
Laboratory Protocol.....	166
Instrumentation.....	166
Measurement Protocol	166
Experiment 1: Thin-Film Interference Observed from Microspheres.....	167
Experiment 2: Interference Spectrum from an Inhomogeneous Film of Nanospheres	168
Experiment 3: Interference Spectrum from a Biological Cell as an Inhomogeneous Film.....	169
Answers and Hints	170
Experiment 1: Data Analysis	170
Experiment 2: Sample Preparation	170
Data Analysis	171
Laboratory 7: Measurement of Real and Imaginary Refractive Index of Cells	171
Background	171
Relationship between the Real and Imaginary Parts of the Refractive Index.....	172
Laboratory Protocol.....	173
Instrumentation.....	173
What Is Needed	173
Sample Preparation.....	173
Experiment.....	174
Data Analysis.....	174
References	175
5. Tissue Spectroscopy	177
Light Transport in a Medium with Continuously Varying Refractive Index	178
Discussion	178
Differential Scattering Cross-Section.....	179
Modeling Continuous Media with a Whittle–Matérn Correlation Function	179
Range of Validity.....	182
Phase Function–Corrected Diffusion Approximation.....	182
Introduction	182
Transport Equation for the Phase Function–Corrected Radiance.....	183
Derivation of the Phase Function–Corrected Radiance, Fluence Rate, and Reflectance.....	188
Accuracy of the Phase Function–Corrected Diffusion Approximation	190
Physical Interpretation of the Phase Function–Corrected Radiance.....	191
Summary and Concluding Remarks.....	191

Laboratory 1: Building a Spectrometer	193
Suggested Lab Components	194
Laboratory Protocol	194
Analysis	195
Discussion	196
Questions	196
Laboratory 2: Diffuse Reflectance Spectroscopy	196
Measurement of Optical Properties	196
Materials	197
Lab Protocol	197
Analysis	198
Questions	199
Learning Objectives	200
Laboratory 3: Measurement of Optical Properties of Tissue Using Spectroscopic Optical Coherence Tomography	200
Background	200
Laboratory Protocol	204
Suggested Lab Components	204
Exercises	204
Discussion	206
Questions	206
Laboratory 4: Depth-Selective Tissue Spectroscopy: Measuring Reflectance Impulse Response Function by Using Enhanced Backscattering	207
Enhanced Backscattering: An Introduction	207
The Scalar Theory of EBS	207
Vector Theory of EBS	210
Effects of Partial Spatial Coherence Illumination and Finite Illumination Spot Size on EBS	215
Full EBS Equation	220
Penetration Depth and Measurement of Optical Properties Using Low-Coherence EBS	220
Laboratory	223
Materials	223
Exercises	225
Laboratory 5: Depth-Selective Tissue Spectroscopy: Polarization-Gated Spectroscopy	227
Laboratory	230
Materials	230
Protocol	231
Analysis	231
Questions	232
Learning Objectives	232
References	232
6. Computational Biophotonics	237
Overview of Computational Biophotonics Methods	237
Laboratory 1: Designing a Spherical Particle Suspension to Mimic Scattering Properties	244
Discussion	244

Materials.....	245
Exercises	245
Use Mie Code to Calculate q_{sca} and g of a Microsphere.....	245
Calculate Scattering Coefficient μ_s and Reduced Scattering Coefficient μ'_s	245
Fit a Power Law for μ'_s	246
Local Fit for the Power Law	247
Refractive Index and Dispersion.....	247
Multiple Particle Sizes	247
Mimicking a Mass Fractal.....	248
Plot the Refractive Index Correlation Function of a Sphere Suspension	249
Use the Born Approximation to Calculate the Scattering Properties of a Sphere Suspension	249
Calculate the Refractive Index Correlation Function of a Sphere Mixture	250
Write a Script to Optimize a Sphere Mixture to Mimic a Mass Fractal Dimension D_f over the Visible Spectrum	250
Laboratory 2: Generalized Multiparticle Mie Algorithm	252
Background.....	252
Laboratory Protocol	254
Objective	254
Suggested Lab Components	254
Lab Preparation	254
Exercise.....	257
Discussion and Questions.....	258
Laboratory 3: Monte Carlo Simulations of Radiative Transport: Modeling Radial Probability Distribution from a Semi-Infinite Medium and Comparison with the Diffusion Approximation	258
Monte Carlo Simulation Algorithm	259
Laboratory Exercises.....	265
Laboratory 4: The Finite-Difference Time-Domain Method in Computational Biophotonics	267
Background.....	268
Introduction to the FDTD Method	268
Angora: An Open-Source FDTD Software Package.....	269
Binary Version	270
Compilation and Installation.....	270
Running Simulations with Angora.....	271
Laboratory	272
One-Dimensional FDTD	272
Scattering of Light from a Sphere: The Lorenz-Mie Solution	277
Laboratory 5: Modeling Random Refractive Index Distribution in Tissue: Creating Random Volumes with Specified Covariance.....	281
Background.....	282
Laboratory	283
References	286
Index	289
